

LIST OF PLATES

<u>Plate No.</u>	<u>Title</u>	<u>Page No.</u>
Plate 1.1	Generation and dumping of Kota stone dust	10
Plate 1.2	Glass slurry generation and disposal	15
Plate 4.1	Map of India showing various sources of materials used in this study	108
Plate 4.2	Collection of Kota stone dust in Kota	110
Plate 4.3	Dumping of glass powder near the glass factory in Bhopal	110
Plate 4.4	Penetration testing apparatus	115
Plate 4.5	Softening point test of bitumen using ring and ball apparatus	115
Plate 4.6	Determination of absolute viscosity using Cannon Manning viscometer	117
Plate 4.7	Determination of specific gravity	119
Plate 4.8	Determination of liquid limit	121
Plate 4.9	Determination of plastic limit	121
Plate 4.10	Performing MBV test in laboratory	122
Plate 4.11	MBV analysis of Kota stone dust	122
Plate 4.12	Standard Rigden void apparatus	124
Plate 4.13	Mini compactor apparatus used in the Study	124
Plate 4.14	German filler test of Kota stone dust	125
Plate 4.15	Malvern Mastersizer at AMPRI Bhopal	127
Plate 4.16	Set up for SEM at the central instrument facility, IIT (BHU) Varanasi	130
Plate 4.17	Photomicrograph of glass powder at 5000X magnification	130
Plate 4.18	Photomicrograph of hydrated lime at 5000X magnification	131
Plate 4.19	Photomicrograph of stone dust at 5000X magnification	131
Plate 4.20	Photomicrograph of Kota stone dust at 5000X magnification	132
Plate 4.21	XRD facility at central instrument facility, IIT (BHU) Varanasi	134
Plate 4.22	Optim X, X-Ray Fluorescence analyzer	136
Plate 4.23	Hydrophilic coefficient test of various fillers	138

Plate 4.24	Set up for pH tests of various fillers	138
Plate 5.1	Conditioning of specimens in a water bath maintained at 60°C	157
Plate 5.2	Testing of Marshall stability and flow	157
Plate 5.3	Marshall specimens after testing	157
Plate 5.4	Determination of G_{mm} of mixes as per ASTM D2041 guidelines	157
Plate 6.1	Preparation of bituminous mastic using mechanical mixer	174
Plate 6.2	Thin film oven used in this study	176
Plate 6.3	Moisture oven used in this study	176
Plate 6.4	Determination of softening point	177
Plate 6.5	Dynamic shear rheometer used in this study (Anton Paar MCR 101)	179
Plate 7.1	Conditioning of specimens in modified Lottman test	242
Plate 7.2	Untested GP 8.5% mix after being subjected to freeze-thaw conditioning	247
Plate 7.3	Measuring temperature of loose mix	249
Plate 7.4	Skimming of free bitumen from top surface of boiled water	249
Plate 7.5	Analysis of stripping by visual inspection	249
Plate 7.6	UTM-14 used in the testing of fatigue life of mixes	257
Plate 7.7	Conditioning of the specimens	257
Plate 7.8	Failure of a specimen	257
Plate 7.9	Specimens before testing	263
Plate 7.10	Specimens after being tested	263
Plate 7.11	Setting up the test specimen	272
Plate 7.12	Close view of test setup	272
Plate 7.13	Haversine loading	272
Plate 8.1	Input screen of IITPAVE	288
Plate 8.2	Output screen of IITPAVE showing computed horizontal tensile strain (dashed box) and vertical subgrade strain (bold box)	288
