List of Figures	xv
Pre	xvii
1 Introduction	1
1.1 Background	1
1.1.1 Linear and Nonlinear Waves	1
1.1.2 Hyperbolic system of PDEs	3
1.1.3 The Riemann Problem	6
1.1.4 Dusty Gas	11
1.1.5 Ideal and Non-ideal Gas	14
1.1.6 Chaplygin Gas	15
1.2 Motivation	17
1.3 Literature Review	20
1.4 Aims and Thesis Objectives	24
2 The formation of shock wave in a two-dimensional supersonic planar and axisymmetric non-ideal gas flow with magnetic field	27
2.1 Introduction	28
2.2 Governing equations describing the non-ideal magnetogasdynamic flow	31
2.3 Characteristic formulation	32
2.4 Transport equation for shock wave	33
2.5 Steepening of shock wave	35
2.6 Results and discussion	37
2.6.1 Planar case ($n = 0$)	37
2.6.2 Axisymmetric case ($n = 1$)	41
2.7 Conclusion	44
3 The effect of dust particles on the evolution of weak discontinuity in two-dimensional supersonic flow of van der Waals gas	45

3.1	Introduction	45
3.2	Governing equations and its characteristic formulation	48
3.3	Transport equations for the evolution of weak discontinuity	51
3.4	Evolution of weak discontinuity	53
3.5	Results and discussion	54
3.5.1	Planar flow	54
3.5.2	Cylindrically symmetric flow case	56
3.5.3	Spherically symmetric flow	60
3.6	Conclusions	64
4	The Analytical Solution of The Riemann problem for Magnetogas-dynamic system.	65
4.1	Introduction	65
4.2	The Riemann problem for magnetogasdynamic system	70
4.3	Riemann solution of the transport equations	75
4.4	Delta-shocks	79
4.4.1	Limiting behavior of Riemann solution($c_1, c_2 \rightarrow 0$)	79
4.4.2	Formation of Delta-shock	84
4.5	Vacuum states	88
4.6	Conclusions	92
5	The concentration and cavitation in the Riemann solution for non-homogeneous logarithmic equation of state with magnetic field	93
5.1	Introduction	94
5.2	Riemann problem for modified system	98
5.2.1	Rarefaction waves	99
5.2.2	Shock waves	101
5.3	Riemann solution of the transport equations (pressureless and vanishing magneto-gas dynamics model with friction term (5.5))	105
5.4	Riemann solution for Limiting behavior	110
5.4.1	Formation of delta-shock	110
5.4.2	Formation of vaccum state	115
5.4.3	Formation of contact discontinuity	121
5.5	Conclusions	124
6	The analytical solutions of the Riemann problem to 1-D non-ideal flow of dusty gas with external force	125
6.1	Introduction	126
6.2	Behaviour of the Riemann solutions	131
6.2.1	Continuous solutions	132
6.2.2	Vacuum solution	136
6.2.3	Bounded discontinuous solutions	137

6.2.3.1	1-Shock wave curve	138
6.2.3.2	2-Shock wave curve	138
6.2.3.3	3-contact discontinuity	138
6.3	Solution of transformed homogeneous systems (6.6)-(6.7) to the Riemann problem	141
6.4	Solution of non-homogeneous system to the Riemann problem	147
6.5	Conclusion	153
7	Summary and Future scope	155
7.1	Summary	155
7.2	Future Scope	159
