

A Numerical Study of a Class of Diffusion Equations with Fractional Derivatives

Thesis submitted in partial fulfillment

for the Award of Degree

DOCTOR OF PHILOSOPHY

by

Rashmi Sharma

DEPARTMENT OF MATHEMATICAL SCIENCES

INDIAN INSTITUTE OF TECHNOLOGY

(BANARAS HINDU UNIVERSITY)

VARANASI -221005

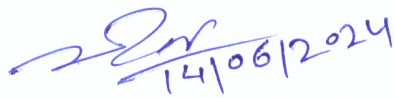

Roll No: 18121521

October 2024

CERTIFICATE

It is certified that the work contained in this thesis titled “*A Numerical Study of a Class of Diffusion Equations with Fractional Derivatives*” by *Rashmi Sharma* has been carried out under our supervision, and this work has not been submitted elsewhere for a degree.

It is further certified that the student has fulfilled all the requirements of Comprehensive Examination, Candidacy and SOTA for the award of Ph.D. degree.

Handwritten signature of Dr. Rajeev in blue ink, with the date 14/06/2024 written below it.

(Dr. Rajeev)

(Supervisor)

Associate Professor

Department of Mathematical Sciences

Indian Institute of Technology

(Banaras Hindu University)

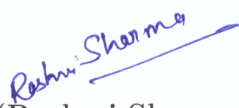

Varanasi-221005

DECLARATION BY THE CANDIDATE

I, *Rashmi Sharma*, certify that the work embodied in this thesis is my own bonafide work and carried out by me under the supervision of *Dr. Rajeev* from *January, 2019* to *June, 2024* at the *Department of Mathematical Sciences, Indian Institute of Technology (Banaras Hindu University), Varanasi*. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, *etc.*, reported in journals, books, magazines, reports dissertations, theses, *etc.*, or available at websites and have not included them in this thesis and have not cited as my own work.

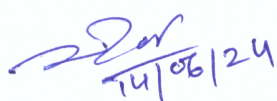

Date: 14/06/24

Place: Varanasi

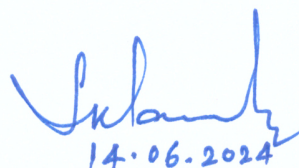

(Rashmi Sharma)

CERTIFICATE BY THE SUPERVISOR

It is certified that the above statement made by the student is correct to the best of my/our knowledge.

14/06/24

(Dr. Rajeev)

My Beloved Family

ACKNOWLEDGEMENTS

A thesis is not the product of one person's work in its entirety. Its evolution has been greatly assisted by many people. My doctoral career was filled with a great deal of memorable highs and lows, as well as struggle, support, and faith. Numerous individuals have greatly aided me along this journey. It is impossible to express gratitude in a few sentences. Nevertheless, I would like to use this chance to thank them from the bottom of my heart for their love, support, and compassion.

*I owe a great debt of thanks to my respected supervisor, **Dr. Rajeev, Associate Professor, Department of Mathematical Sciences, IIT(BHU), Varanasi.** It has been a great pleasure to work under his mentorship. He listened my queries, with utmost patience and curiosity, and then offered his perceptive that gave a new direction to my research. I am very grateful to him for introducing me a fascinating branch of mathematics. I owe the completion of this thesis to his great wisdom, careful guidance, continuous encouragement, and unending patience over the past year.*

*Besides my supervisor, I owe my special thanks to **Prof. S. K. Pandey, Head of Department, Dr. Anuradha Banerjee, Convener, DPGC of Department and Prof. S. Das** for their support throughout my research work. I would like to express my deep sense of gratitude to the rest of my RPEC (Research Progress Evaluation Committee) members **Dr. Rajesh Kumar Pandey and Dr. Hari Prabhat Gupta**, for their precious time, valuable suggestions and encouragement. I also express my deep sense of gratitude to all faculty members and researchers of the department for their assistance and support. I express my thanks to all non*

teaching staff members of the department for their cooperation and help throughout my research tenure.

Above all, I feel a deep sense of gratitude for my family members who formed part of my vision and taught me good things that really matter in life. Their infallible love and support has always been my strength.

*I gratefully acknowledge **University Grants Commission, India** for providing the fellowship in form of Junior Research Fellowship and Senior Research fellowship.*

I am also grateful to my Institute, IIT(BHU), for providing necessary resources throughout my Ph.D. program.

*This acknowledgment would be incomplete if the name of great visionary **Pt. Madan Mohan Malaviya** is not mentioned, who made this divine centre of knowledge. Deepest regards to him.*

Above all, praises and thanks to the God, the almighty, for his showers of blessings throughout my research work, who has made everything possible.

Rashmi Sharma

3.2	Absolute error at $\alpha(x, y, t)=0.3$ for example 3.7.2.	69
3.3	Absolute error at $\alpha(x, y, t)=0.5$ for example 3.7.2.	69
3.4	Absolute error at $\alpha(x, y, t)=0.7$ for example 3.7.2.	70
3.5	Absolute error at $\alpha(x, y, t)=0.9$ for example 3.7.2.	70
4.1	Plots of numerical solution for Example 4.5.1 at $m = 11$	95
4.2	Plots of absolute error for Example 4.5.1 at $m = 11$	95
4.3	Absolute error for example 4.5.2 at $\alpha(\mathcal{S}, t) = 0.5$	96
4.4	Absolute error for example 4.5.2 at $\alpha(\mathcal{S}, t) = 0.6$	96
4.5	Absolute error for example 4.5.2 at $\alpha(\mathcal{S}, t) = 0.7$	97
4.6	Absolute error for example 4.5.2 at $\alpha(\mathcal{S}, t) = 0.8$	97
4.7	Absolute error for example 4.5.2 at $\alpha(\mathcal{S}, t) = 0.9$	98
5.1	Numerical solutions for example 5.7.1 at different value of $\alpha(x, t)$. . .	129
5.2	Absolute errors for example 5.7.1 at different value of $\alpha(x, t)$	130

List of Tables

2.1	Comparison of L_2 errors of $u(x, t)$ for different values of t at $\alpha=0.5$	38
2.2	Comparison of L_∞ errors of $u(x, t)$ for different values of t at $\alpha=0.5$	38
2.3	Comparison of absolute error between our solution and solution given in [1] for Example (2.7.2)	41
2.4	The convergence order for Example (2.7.2) at $t=1$ and $\alpha=1$	41
3.1	Obtained L_2 and L_∞ errors for example 3.7.1.	67
3.2	Obtained L_2 and L_∞ errors for example 3.7.2.	68
3.3	The variation of L_2 and L_∞ errors with increasing value of degree of approximation for Example 3.7.3.	71
4.1	Obtained errors for example 4.5.1.	94
4.2	Comparison of maximum absolute errors for example 4.5.2.	96
4.3	Comparison of maximum absolute errors for example 4.5.3.	98
5.1	The computational error and CO for example 5.7.1	130
5.2	The computational error and CO for example 5.7.3	131

PREFACE

This thesis is concerned with the construction and solution of various models of reaction-diffusion problems by operational matrix approaches with collocation scheme. This thesis contains six chapters. In chapter 1, an overview of the field's literature and some fundamental terminology are included. Since diffusion models are taken into consideration in porous media, therefore first chapter starts with the brief discussion of porous media. Additionally, a brief explanation of the advection-reaction diffusion equation is provided, because the solution of this kind of diffusion equation is the main goal of the work.

In second chapter, the author provides the numerical solution for a non-linear reaction-advection diffusion equation with fractional-order space-time derivatives in a finite domain. In the proposed scheme, time fractional derivative in Caputo sense is approximated by using the non-standard finite difference method and the fractional space derivative is specifically approximated by using Vieta-Fibonacci polynomials. These approximations generate a system of ordinary differential equations which is converted into an equivalent system of algebraic equations by using collocation method. Finally, the obtained system of algebraic equations is solved to find the dependent variables (unknowns) of the considered problem. The stability and convergence related to the time discretization of this approach are also discussed. In this chapter, the effectiveness and precision of the proposed scheme are analyzed with the help of examples, and it is observed that the proposed scheme is sufficiently accurate and efficient technique. Also, the effects of fractional-order derivatives on concentration profiles are discussed.

In the chapter 3, the author presents a novel numerical algorithm based on the operational matrix and collocation approach for solving the two-dimensional non-linear

fractional reaction-advection diffusion equations of variable order that is related to the groundwater pollution problem. In this chapter, the operational matrices of variable-order derivatives are derived with the aid of Vieta-Lucas polynomials for two-dimension problem which is used in the proposed algorithm. To find a solution to the considered problem, the terms are approximated by a series of triple-shifted Vieta-Lucas polynomials to construct the residual of the reaction-advection diffusion model. Then collocation technique is applied to transform the problem into algebraic equations, which is solved by Newton's method. Moreover, the convergence and upper bound of the derived error formula for the approximate solution are discussed. Finally, some examples are presented to show the efficiency of the considered scheme, and the results are shown by using graphical presentation and tabular representations.

In chapter 4, the author presents a reaction-advection-diffusion model which describes many physical phenomena, such as the transportation of particles, groundwater pollution, viscoelasticity, and many others. In this chapter, a well-known fractional operator of variable order is used to present the space-time variable-order reaction-advection-diffusion equation. The operational matrix of the variable order derivative is developed with the aid of shifted Vieta-Fibonacci polynomials. This operational matrix is used in the approximation of derivatives of variable order to construct residual associated with the considered problem, and then it is collocated at some points in the domain, which generates a system of non-linear algebraic equations. Newton's method is applied to solve the obtained system of non-algebraic equations. To validate the precision of the proposed scheme, some problems are solved by the proposed scheme, and its comparisons are made with the existing analytical solution, which clearly indicates the improved accuracy of the proposed method. The convergence of the scheme and error analysis are also discussed in this chapter.

In the chapter 5, the one and two-dimensional nonlinear fractional fourth-order sub-diffusion models with neumann boundary are discussed. The numerical solution of the problems are obtained by using a novel approach which depend on shifted Airfoil polynomials of second kind and collocation technique. An operational matrix of differentiation for shifted Airfoil polynomials is derived and applied to deal with the time and space fractional derivative of variable-order. The convergency of the scheme for presented numerical solution and error analysis are also discussed. In this chapter, the author also analyze the order of convergence for the solution of considered problem. For validation, this numerical approach has been discussed with some illustrative problems. The results of the error analysis are also presented through tables, which clearly indicate the improved accuracy of the proposed method.

In the Chapter 6, overall work has been concluded and also the future scope of the related works has been furnished.
