

# Visible-Light Mediated Synthesis of Nitrogen and Sulfur Containing Compounds: A Greener Approach

THESIS SUBMITTED IN PARTIAL FULFILLMENT FOR THE  
AWARD OF DEGREE

DOCTOR OF PHILOSOPHY

By

**ARSALA KAMAL**

Department of Chemistry  
Indian Institute of Technology  
(Banaras Hindu University)  
Varanasi-221005

Roll No: 17051009

Year of Submission: 2023

## CERTIFICATE

---

---

It is certified that the work contained in the thesis titled "*Visible Light Mediated Synthesis of Nitrogen and Sulfur Containing Compounds: A Greener Approach*" by "*Arsala Kamal*" has been carried out under my supervision and this work has not been submitted elsewhere for a degree.

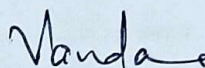

It is further certified that the student has fulfilled all the requirements of Comprehensive, Candidacy, and SOTA.

  
Supervisor

Dr. (Mrs.) Sundaram Singh

Department of Chemistry

IIT (BHU), Varanasi-221005  
~~Dr. (Mrs.) Sundaram Singh~~  
Associate Professor  
Department of Chemistry  
Indian Institute of Technology,  
Varanasi Hindu University, Varanasi-221005

  
Co-Supervisor

Prof. Vandana Srivastava

Department of Chemistry

IIT (BHU), Varanasi-221005  
~~Dr. Vandana Srivastava~~  
Professor  
Department of Chemistry  
Indian Institute of Technology (BHU)  
Varanasi-221005

## DECLARATION BY THE CANDIDATE

I, "Arsala Kamal" certify that the work embodied in this thesis is my own bonafide work and carried out by me under the supervision of "Dr. (Mrs.) Sundaram Singh" from "July 2017" to "2023" at the "Department of Chemistry," Indian Institute of Technology, Banaras Hindu University, Varanasi. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, etc., reported in journals, books, magazines, reports, dissertations, theses, etc., or available at websites and have not included them in this thesis and have not cited as my own work.

Date : 28 - 02 - 2023

Place : Varanasi

## ACKNOWLEDGEMENTS

---

---

I give honor to God, the creator, and sustainer of life, for blessing me to be able to pursue and complete this milestone. I thank God for giving me much knowledge, wisdom, and health to complete this work on time.

Foremost, I “**Ms. Arsala Kamal**” would like to thank my Research Supervisor “**Dr. (Mrs.) Sundaram Singh**” Department of Chemistry, Indian Institute of Technology (Banaras Hindu University), Varanasi, for her wide experience, unrivaled knowledge of chemistry, learned guidance, stimulating discussion, and unstinting moral support which helped me immensely in completing this work in time. I thank her for putting up with my shortcomings and helping me to improve and overcome the same. Particularly, in the final stages, she has sustained me with her paternal care and thoughtful advice. I am beholden to my co-Supervisor **Prof. Vandana Srivastava** who had been a constant source of support and encouragement.

I am thankful to **Prof Yogesh Chandra Sharma** Head of the Department and **Prof. Rashmi Bala Rastogi**, and **Prof. Dhanesh Tiwary**, former Head of the Department of Chemistry, Indian Institute of Technology (Banaras Hindu University), for providing necessary lab facilities and a congenial working atmosphere in the Department.

I would also like to thank my RPEC members, **Prof. Vandana Srivastava**, Department of Chemistry, Indian Institute of Technology (Banaras Hindu University), **Dr. Jeyakumar Kandasamy** (former Internal subject expert), **Dr. Manisha Malviya** (Internal subject expert) Department of Chemistry, Indian Institute of Technology (Banaras Hindu University), and **Dr. Abha Mishra** (External subject expert), Department of Biochemical Engineering, Indian

Institute of Technology (Banaras Hindu University), for their valuable suggestions throughout this work.

I'm highly indebted to CIFIC, Indian Institute of Technology (BHU) for providing NMR Spectroscopy facility, Department of Chemistry, Banaras Hindu University (BHU) for Mass Spectrometry, and Fluorescence Spectroscopy

I also wish to thank all the non-teaching staff of the Department of Chemistry, Indian Institute of Technology (BHU) for their cooperation and timely help.

I am thankful to all lab members Dr. Savita Kumari, Dr. Dharendra Kumar, Himanshu Kumar Singh, Suresh Kumar Maury, Ambuj Kumar Kushwaha, and Shikha Pandey for their kind cooperation and friendly environment during the entire period of my research.

I would like to express my deepest affection to my father “Mr. Anwar Kamal”, my mother, “Mrs. Shaheen Qamar”, younger brothers “Shahnoor”, “Ahmad Noor” and other family members for their unconditional love, concern, continuous moral support, and encouragement which enabled me to perform my liabilities. I would like to offer my special thanks to Surya Prakash Pandey for their unwavering support, and encouragement. I also would like to thank my friends Alok Kumar Singh, Nivedita Shukla, Pratigya Pathak, Suresh Pandey, and Gaurav for their affection, prayer, and support as well as hard scolds to focus on my aim.

At the last but not least, I thank to all my well-wishers whose names I may have failed to mention here unintentionally. Thanks to all of you for being there for me when times were the toughest.

**Date:** 28-02-2023

**Arsala Kamal**

## LIST OF TITLES

| <b>Titles</b>  | <b>Page No.</b> |
|--|-----------------|
| <b>CHAPTER-1</b>   |                 |
| <b>Introduction</b>  |                 |
| 1.1 Introduction   | 1               |
| 1.2 Historical background and basic concept of Visible-light mediated organic reactions/synthesis (Photochemistry) | 2               |
| 1.3 Mechanistic Pathways of photoredox catalysis   | 6               |
| 1.3.1 Photoredox catalysis (Electron transfer)   | 7               |
| 1.3.2 Hydrogen Atom Transfer (HAT)   | 8               |
| 1.3.3 Energy Transfer  | 9               |
| 1.3.4 Electron donor-acceptor (EDA) complexes  | 10              |
| 1.4 Visible light-mediated synthesis of Nitrogen and Sulfur-containing Compounds                                   | 12              |
| 1.4.1 Amines   | 13              |
| 1.4.1.1 Synthesis amines with alkenes  | 14              |
| 1.4.1.2 Amine from decarboxylation of carboxylic acid  | 15              |
| 1.4.1.3 Synthesis of amine from imine  | 16              |
| 1.4.1.4 Amination of carbonyl compounds  | 17              |
| 1.4.1.5 From dehydrohalogenation couplings   | 18              |
| 1.4.1.6 Synthesis of Amine by the reduction of amide   | 19              |
| 1.4.2 Imines   | 19              |
| 1.4.2.1 From aerobic oxidative coupling of benzylamines  | 20              |
| 1.4.2.2 From Aerobic dehydrogenation of amines   | 20              |
| 1.4.2.3 From coupling of alcohols and amines   | 21              |
| 1.4.3 Oximes   | 21              |
| 1.4.3.1 From aromatic terminal alkene  | 22              |
| 1.4.3.2 From amine   | 22              |

|       |         |   |    |
|-------|---------|---|----|
|       | 1.4.3.3 | From nitro compounds  | 23 |
| 1.4.4 |         | Amide   | 23 |
|       | 1.4.4.1 | Synthesis of Amide From Keto Acids                                      | 24 |
|       | 1.4.4.2 | From Enamines   | 25 |
|       | 1.4.4.3 | From aldehyde   | 25 |
|       | 1.4.4.4 | Radical Aminocarbonylation  | 26 |
|       | 1.4.4.5 | From oxime  | 27 |
|       | 1.4.4.6 | From alcohol  | 28 |
|       | 1.4.4.7 | From acids  | 28 |
|       | 1.4.4.8 | From alkyne   | 29 |
|       | 1.4.4.9 | From Amines   | 29 |
| 1.4.5 |         | Sulfonamides  | 30 |
|       | 1.4.5.1 | Synthesis of sulfonamides from sulfonyl chlorides                       | 31 |
| 1.4.6 |         | Thioether(Sulfides)   | 32 |
|       | 1.4.6.1 | From disulfides   | 33 |
|       | 1.4.6.2 | From Thiol  | 35 |
|       | 1.4.6.3 | From Sulfones   | 36 |
| 1.4.7 |         | Sulfones  | 36 |
|       | 1.4.7.1 | Synthesis of sulfones from DABSO  | 37 |
|       | 1.4.7.2 | Synthesis of sulfones from sulfinic acids                               | 38 |
|       | 1.4.7.3 | Synthesis of sulfones from sulfonyl hydrazines                          | 38 |
|       | 1.4.7.4 | Synthesis of sulfones from sodium metabisulfite                         | 39 |
|       | 1.4.7.5 | Synthesis of sulfones from in-organic sulfonates                        | 39 |
| 1.4.8 |         | $\beta$ -keto sulfones  | 40 |
|       | 1.4.8.1 | Synthesis of $\beta$ -keto sulfones from sulfinic acids                 | 41 |
|       | 1.4.8.2 | Synthesis of $\beta$ -keto sulfones from aryl sulfonyl hydrazides       | 41 |
|       | 1.4.8.3 | Synthesis of $\beta$ -keto sulfones from aryl sulfonyl chloride         | 41 |
|       | 1.4.8.4 | Synthesis of $\beta$ -keto sulfones by rearrangement of vinyl Tosylates | 42 |
|       | 1.4.8.4 | Synthesis of $\beta$ -keto sulfones from alkenes or alkynes             | 43 |
| 1.5   |         | References  | 45 |

## CHAPTER-2

### Visible Light-Induced Cu-Catalyzed Synthesis of Schiff's Base of 2- Amino Benzonitrile Derivatives and Acetophenones

|     |   |    |
|-----|---|----|
| 2.1 | Introduction  | 55 |
| 2.2 | Results and Discussion  | 57 |
| 2.3 | Plausible Mechanism   | 64 |
| 2.4 | Conclusion  | 65 |
| 2.5 | Experimental Section  | 65 |
|     | 2.5.1 General Procedure for visible light induced schiff base of 2-amino benzonitrile derivatives and acetophenones | 65 |
|     | 2.5.2 Mechanistic Investigation with UV-Visible absorption spectra  | 65 |
| 2.6 | Characterization of product   | 66 |

|     |                             |    |
|-----|-----------------------------|----|
| 2.7 | Spectral Data of Product 3a | 72 |
| 2.8 | References                  | 73 |

### CHAPTER-3

#### Photo-triggered Synthesis of Sulfonamides in a Sustainable Solvent via Electron Donor-Acceptor Complex

|      |   |     |
|------|---|-----|
| 3.1  | Introduction  | 77  |
| 3.2  | Results and Discussion  | 80  |
| 3.3  | Control Experiment  | 86  |
|      | 3.3.1 UV-Vis absorption experiment                                      | 88  |
|      | 3.3.2 Stern-Volmer Fluorescence quenching studies                       | 89  |
|      | 3.3.2.1 Emission Spectra  | 89  |
|      | 3.3.2.2 Stern-Volmer fluorescence quenching experiments                 | 90  |
|      | 3.3.3 ON/OFF experiments  | 91  |
| 3.4  | Plausible Mechanism   | 92  |
| 3.5  | Conclusion  | 92  |
| 3.6  | Experimental Setup  | 93  |
|      | 3.6.1 The visible light irradiation setup.                              | 93  |
| 3.7  | Experimental Procedures   | 94  |
|      | 3.7.1 General procedure for the preparation of compound 3a-3s & 3aa-3aj | 94  |
| 3.8  | Characterization data of compounds                                      | 94  |
| 3.9  | Spectral Data of Few Product  | 108 |
| 3.10 | HRMS Spectra  | 111 |
| 3.11 | References  | 112 |

### CHAPTER-4

#### Visible-Light Induced Arylation via Electron-Donor-Acceptor Complex: a Catalyst-Free Approach for the Synthesis of N-(Hetero)Aryl Sulfonamides

|     |  |     |
|-----|--|-----|
| 4.1 | Introduction   | 117 |
| 4.2 | Results and Discussion   | 120 |
| 4.3 | Control Experiments  | 128 |
|     | 4.3.1 UV/Vis absorption spectrometry                               | 130 |
|     | 4.3.2 Stoichiometry of the EDA complex 1b+2a (Jobs plot)           | 131 |
|     | 4.3.3 Stern-Volmer Fluorescence quenching studies                  | 131 |
|     | 4.3.4 ON-OFF Experiments   | 132 |
| 4.4 | Proposed Mechanism   | 133 |
| 4.5 | Conclusion   | 134 |
| 4.6 | Experimental Procedures  | 135 |
|     | 4.6.1 General procedure for the preparation of N-Aryl Sulfonamide. | 135 |
|     | 4.5.2 Application under the sunlight                               | 135 |
| 4.7 | Characterization of the Target Products                            | 136 |
| 4.8 | Spectral Data of products  | 153 |

|      |              |     |
|------|--------------|-----|
| 4.9  | HRMS Spectra | 157 |
| 4.10 | References   | 159 |

## **CHAPTER-5**

### **Visible Light-Driven Synthesis of Amine–Sulfonate Salt Derivatives: A Step towards Green Approach**

|      |   |     |
|------|---|-----|
| 5.1  | Introduction  | 163 |
| 5.2  | Results and Discussion  | 166 |
| 5.3  | X-ray crystallographic study of 3b Method for single crystals growth    | 170 |
| 5.4  | Conclusion  | 172 |
| 5.5  | Experimental Procedures   | 173 |
|      | 5.5.1 General procedure for the preparation of compound 3a-3o           | 173 |
|      | 5.4.2 General procedure for the preparation of compound 4               | 173 |
| 5.6  | UV-Visible absorption spectra   | 173 |
| 5.7  | Time profile of photocatalytic reaction with and without visible Light. | 174 |
| 5.8  | Characterization of the products.                                       | 176 |
| 5.9  | Spectral Data of Products   | 182 |
| 5.10 | References  | 183 |

## **CHAPTER-6**

### **Summary and Conclusion**

|     |                        |     |
|-----|------------------------|-----|
| 6.1 | Summary and conclusion | 185 |
|-----|------------------------|-----|

### **List of research publications**

## LIST OF SCHEMES

| <b>Scheme</b> |  | <b>Page<br/>No.</b> |
|---------------|--|---------------------|
| 1.1           | Inorganic and organic photoredox catalysts   | 6                   |
| 1.2           | Photoredox catalysis by oxidative and reductive pathways with the electronic state of the catalyst | 7                   |
| 1.3           | Photocatalytic pathway via HAT   | 9                   |
| 1.4           | Photocatalysts used in photochemical reactions with EnT pathways                                   | 9                   |
| 1.5           | Photocatalytic pathway via EDA complex   | 11                  |
| 1.6           | Schematic pathway of EDA complex (A) and exciplex (B)  | 11                  |
| 1.7           | A radical generation strategy based on LG-installed EDA complex                                    | 12                  |
| 1.8           | Synthesis of amine with alkenes  | 15                  |
| 1.9           | Synthesis of amine from carboxylic acid via single electron oxidation                              | 15                  |
| 1.10          | Synthesis of amine from carboxylic acid via iodine based oxidant                                   | 16                  |
| 1.11          | Synthesis of amine from imine using CdSe/CdS core/shell QDs  | 16                  |
| 1.12          | Synthesis of amine from benzophenone ketimines   | 16                  |
| 1.13          | Photocatalyzed direct reductive amination of aldehydes   | 17                  |
| 1.14          | Synthesis of complex tertiary alkylamines via carbonyl alkylative amination                        | 17                  |
| 1.15          | Synthesis of trifluoromethyl tertiary alkylamines  | 17                  |
| 1.16          | Synthesis of amines by dehydrohalogenative couplings   | 18                  |
| 1.17          | Synthesis of amine by reductive amination of nitroarenes and boronic acids                         | 18                  |
| 1.18          | Synthesis of amine by three-component alkylation reactions of imines                               | 19                  |
| 1.19          | Synthesis of amine Fe/Zn or Fe/In-catalyzed hydrosilylation of amides                              | 19                  |
| 1.20          | Synthesis of imine by aerobic photo-oxidative coupling of benzyl amines                            | 20                  |
| 1.21          | Synthesis of imine by dehydrogenation of secondary amines  | 21                  |
| 1.22          | Synthesis of imine by cross-coupling of alcohols and amines  | 21                  |
| 1.23          | Synthesis of oxime by cyanation of Terminal Alkene   | 22                  |
| 1.24          | Synthesis of fluoroalkylated oxime   | 23                  |
| 1.25          | Synthesis of oxime from nitro compounds  | 23                  |
| 1.26          | Synthesis of amide from keto acids   | 24                  |
| 1.27          | Synthesis of amide from enamines utilizing Ru photocatalyst  | 25                  |
| 1.28          | Synthesis of amide from enamines via aryl radical  | 25                  |

## General Experimental Considerations

---

---

All the chemicals were procured from Aldrich, USA, and E. Merck, Germany, and were used as received. The solvents were purchased from Merck, India, and Ranbaxy, India, and were purified before their use. The preparation and particulars of the substrates employed for the work undertaken are given in their respective chapters. **Melting points** were measured using Stuart Melting point apparatus SPM10 in open capillary tubes and are uncorrected. **UV-visible spectroscopy** of the reaction solution was recorded on a SHIMADZU UV-3600 UV-visible spectrophotometer. **Infrared (IR)** spectra were recorded on the Perkin-Elmer FT-IR-5300 spectrophotometer ( $\nu_{\max}$  expressed in  $\text{cm}^{-1}$ ). The  $^1\text{H}$  (500 MHz) and  $^{13}\text{C}$  (126 MHz) **NMR**  $^{19}\text{F}$  (126 MHz) **NMR** spectra were run on a Bruker Advance 500 MHz FT-NMR at 500 MHz spectrometers. Chemical shifts are given in  $\delta$  ppm, using tetramethylsilane (TMS) as an internal standard **HRMS (m/z)** and were recorded in an electron ionization or electrospray ionization (ESI) mode on Waters-Q-TOF Premier-HAB213 and Sciex X500R QTOF instruments. The **elemental microanalyses** were performed on Exeter Analytical Inc Model, CE-440 elemental analyzer.

**Thin-layer Chromatography (TLC)** was performed on glass plates ( $7.5 \times 2.5$  and  $7.5 \times 5.0$  cm) coated with Merck silica gel GF 254 using various combinations of ethyl acetate and n-hexane as an eluent. Visualization of spots was accomplished either in an iodine chamber or by exposure to UV light. Merck silica gel (100-200 mesh) was used for column chromatography (approximately 15-20 g per 1 g of the crude product).

## Preface

---

---

The fundamental goal of this thesis is to create novel synthetic methodologies that use visible light as a renewable, sustainable, and environmentally friendly source of energy. Light irradiation provides enough energy to perform the reaction without the disadvantages of thermal activation, such as high temperatures or harsh conditions. This thesis work focuses on developing novel visible-light-mediated organic transformation strategies for the synthesis of Nitrogen and Sulfur-containing compounds in distinct ways.

The effective green synthesis of nitrogen and sulfur-containing compounds is embodied in the thesis titled "**Visible Light Mediated Synthesis of Nitrogen and Sulfur-Containing Compounds: A Greener Approach**". **Chapter 1** will provide a detailed explanation of visible light, its importance, and visible light-mediated synthesis of nitrogen and sulfur-containing compounds.

**Chapter 2** will describe the visible-light-induced Cu-catalyzed synthesis of Schiff's base of 2-amino benzonitrile derivatives and acetophenones. **Chapter 3** will disclose the photo-triggered catalyst-free synthesis of sulfonamides in a sustainable solvent via an electron donor-acceptor (EDA) complex. **Chapter 4** will highlight visible-light-induced arylation via electron-donor-acceptor complex: a catalyst-free approach for the synthesis of n-(hetero)aryl sulfonamides. **Chapter 5** will present a visible-light-driven synthesis of amine-sulfonate salt derivatives: a step towards a green approach finally, **Chapter 6** will summarize and conclude the total thesis work.
