

STRATEGIC PLANNING AND MANAGEMENT OF AN INDIAN HANDLOOM SECTOR

Thesis submitted in partial fulfillment for the
Award of Degree

Doctor of Philosophy

By

Meghavatu Krishna Prasanna Naik

**DEPARTMENT OF MECHANICAL ENGINEERING
INDIAN INSTITUTE OF TECHNOLOGY
(BANARAS HINDU UNIVERSITY)
VARANASI-221005
INDIA**

2023

CERTIFICATE

It is certified that the work contained in the thesis entitled as “**Strategic Planning and Management of an Indian Handloom Sector** ” by Mr. **Meghavatu Krishna Prasanna Naik** has been carried out under my supervision and that this work has not been submitted elsewhere for a degree. It is further certified that the candidate owns the responsibility of the any plagiarism found at the later stage.

It is further certified that the student has satisfactorily fulfilled all the requirements of Comprehensive Examination, Candidacy, SOTA, Pre-submission seminar for the award of the Ph.D. degree.

Dr Prabhas Bhardwaj
Professor and Supervisor
Department of Mechanical
Engineering IIT (BHU),
Varansai-221005

DECLARATION BY THE CANDIDATE

I, " **Meghavatu Krishna Prasanna Naik** ", certify that the work embodied in this thesis is my own bona fide work and carried out by me under the supervision of **Dr. Professor Prabhas Bhardwaj** from "2016" to "2023", at the **Department of Mechanical Engineering (Industrial Management), Indian Institute of Technology (BHU), Varanasi**. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, etc., reported in journals, books, magazines, reports dissertations, theses, etc., or available at websites and have not included them in this thesis and have not cited as my own work. I further declare that I will own the responsibility of any plagiarism if found at a later stage.

Date: 10/10/2023

Meghavatu Krishna Prasanna Naik

Place: Varanasi

(Candidate)

CERTIFICATE BY THE SUPERVISOR(S)

It is certified that the above statement made by the student is correct to the best of my/our knowledge.

Professor Prabhas Bhardwaj
Supervisor
Deptt. of Mechanical Engineering
Indian institute of technology (BHU)
Varanasi-221005

प्राध्यापक / Professor

Title of the Thesis: **Strategic Planning and Management of an Indian Handloom Sector**

Name of the Student: **Meghavatu Krishna Prasanna Naik**

COPYRIGHT TRANSFER

The undersigned hereby assigns to the Institute of Technology (Banaras Hindu University) Varanasi all rights under copyright that may exist in and for the above thesis submitted for the award of the PhD degree.

Date: 10/10/2023

Place: **Varanasi**

(**Meghavatu Krishna Prasanna Naik**)

Note: However, the author may reproduce or authorize others to reproduce material extracted verbatim from the thesis or derivative of the thesis for author's personal use provided that the source and the Institute's copyright notice are indicated.

ACKNOWLEDGEMENTS

First and foremost, I would like to thank my supervisor, **Prof. Prabhas Bhardwaj**, for his guidance, patience, faith, and continued enthusiasm. He is an inspiration to me as a researcher and an example of what it means to be a good person and mentor. I have felt privileged to work in his lab over the years. He has opened so many doors for my development and future, and I have tried to walk through as many as possible. His meticulous and valuable review and constructive criticism have greatly improved the quality of the work. For all of this, I shall be forever grateful to him.

I also thank to **Prof. S.K. Sharma**, **Prof. A.K. Agrawal** and **Dr. Vinaytosh Mishra** for his guidance and continuous motivation. I also thank **Dr. Saurabh Pratap**, **Prof. R.S. Singh** for serving on my research progress evaluation committee (RPEC). I thank all of them for sparing their valuable time and assisting me throughout my research and completion of this thesis. I wish to extend my sincere thanks to **Prof. Santosh Kumar**, Head, Department of Mechanical Engineering, IIT (BHU) Varanasi, for providing me necessary resources to enable me to complete this research work. I also thank **Dr. Lakshay Kumar** and **Dr. Cherian Samuel** for kind support.

During this research journey, I have met many people who have made this period of my life memorable and very pleasant. Among them, I would like to sincerely acknowledge the assistance and motivation provided by Dr. Ajeet Kumar Yadav, Dr. Rishi Ram, Dr. Ria, Dr. Priya, Dr. Ankit, Dr. Susheel, Dr. Amit amber, Dr. Harish Babu, Dr. Anand, Dr. Abhishek Singh, Dr. Abhishek raj, Dr. Vijay, Dr. Rama Krishna, Mr. Venky, Mr. Pavan, Mr. Gopi, Mr. Ajay, Mrs. Suneet, Mr. Anil Kumar Singh, Mr. Rajendra Prasad, Mr. Prashant and Dr. Angika Kushwaha for constantly supporting me in my research work.

Words plunge insufficient to express my regards and deep emotions toward my beloved parents **Mr. Meghavatu Ranga Rao Naik** and **Mrs. Meghavatu Parvathi** for being the source of unconditional love and inspiration to move on the way to my goal of achieving higher education. Their everlasting encouragement, patience, sacrifice and blessings have brought me up to this stage. Parents being earthly God, deserve much more than what I can express in words. I appreciate the support of sister **Mrs. Meghavatu Divya Sree** during the duration of my PhD. Her constant support, encouragement and understanding and putting up with me through highs and lows have made me complete this journey of PhD.

I would like to express my gratitude to the Department of Mechanical Engineering, IIT (BHU) Varanasi, for providing me with the necessary facilities for conducting my research work smoothly and I would also like to express my gratitude to the Angika cooperative society chairman, **Mr. Amresh Kushwaha** and Manager **Dr. Angika Kushwaha** for supporting in research work. I take this occasion to acknowledge the Ministry of Human Resource and Development's financial assistance and development in the form of Teaching Assistantship.

Finally, I bow my head humbly before the almighty Lord Shiva, without whose blessings this work would have been impossible.

PREFACE

The Indian handloom sector is the second-largest unorganized sector in India in terms of employment. Handloom products have a rich history and have been praised internationally for their remarkable styles, aesthetics, artistry, and dexterity. India stands as the largest global producer of handloom products, accounting for 95% of hand-woven fabric supplied to international markets. India's handloom sector is widespread, with its presence in twenty-seven states and four union territories, contributing to product diversity related to each state and territory, integrating its creations with its own distinct cultural, traditional, and custom influences. According to the estimate of the third national handloom census, 2009-10, there were 43.3 lakh weavers in India. According to the fourth handloom census 2019-20, it provides employment to the 35.2 lakh weavers. The reduction in the number of weavers can also be observed in the Varanasi handloom sector. According to the Aggarwal (2003) study, two lakh handloom weavers were in the Varanasi handloom sector. Wood (2014) observed that there were 1 00,794 weavers engaged in the handloom sector, whereas as per the handloom census of 2021, the number of weavers in the Varanasi district is 51,217 (Handloom census, 2021).

In the Handloom sector, the revival and support of existing handloom weavers is an important, challenging task. The present work attempts to study the various issues related to the handloom sector and its weavers of different structures.

Chapter 1 introduces the Indian handloom sector, including the weavers' strength, the share of fabric production, sources of sales, and the types of looms used. Additionally, this chapter discusses the Varanasi handloom sector, its weaver structure, and the current state of the Varanasi handloom sector.

Chapter 2 provides an exhaustive literature review of the seven concepts related to handloom. These are i) Challenges of Handloom sector weavers, ii) Customer requirements for the handloom sector, iii) Omnichannel marketing for the handloom sector, iv) Augmented reality for the handloom sector, v) Certification of Handloom products, vi) Facility location for Handloom weavers vii) Musculoskeletal Disorder of Handloom weavers.

Chapter 3 presents the challenges faced by handloom weavers and the prioritization of their importance according to the weavers' structure. The Analytical Hierarchy Process (AHP) method was used for this purpose. The chapter reveals that different structures of handloom weavers (namely, 1. Independent weavers, 2. Master Weavers, and 3. Cooperative Society Weavers) will have different levels of importance for the challenges. For example, customer reachability is a major issue only for Master Weavers (MW) and Cooperative-Society Weavers (CW), while Independent Weavers (IW) face raw material-related issues as the top challenges. Similarly, CW and MW face the migration of weavers as another top challenge, while IW has a long return on investment. In order to mitigate the risks associated with these challenges, there is a need to focus on different strategies for different structures of handloom weavers rather than using strategies usually designed for the entire weaver community.

Chapter 4 addresses the problem identified in Chapter 3 as "Lack of information regarding customer preferences" faced by all three structures. This chapter identifies customer requirements and proposes strategies to fulfill these with the help of Quality Function Deployment (QFD) and the AHP. The issue of "strong demand for authentic handloom products" was found to be the top requirement with others as "Price of the product," "Fabric," "size and color" etc. To meet these customer requirements, handloom weavers must provide certification for their products, which should include silk mark

logos, handloom marks, and geographical indication marks. Additionally, they need to employ an online marketing strategy to bypass intermediaries and reduce product costs. Another crucial technical factor is the store location, which enhances accessibility for customers and fosters seller loyalty. Establishing a network of stores in high-footfall areas will enable weavers to sell their products directly, reducing the middleman's role. Online marketing and sales are another strategy that the weavers can adopt. In these contexts, the government's role becomes pivotal.

Chapter 5 and Chapter 6 address the problem presented in Chapter 4, which is the customer requirement for online marketing. This is achieved by embracing new technologies such as omnichannel marketing and Augmented Reality marketing within the handloom sector. Government support and policies play a pivotal role in facilitating the adoption of these new ideas and opportunities, ultimately influencing the adoption of technology and enhancing workforce competitiveness. To mitigate the impact of barriers, it is imperative for the government to create policies that involve frequent communication with weavers to address regulatory issues.

Chapter 7 addresses the problem introduced in Chapter 4, i.e., the certification of handloom products. This chapter provides various methods for identifying genuine handloom products, such as weaving undetachable silk marks, handloom marks, geographical indication marks, and quick response codes on handloom products. Various customer requirements have been analyzed for each identified strategy using the QFD approach with AHP. A novel strategy of “Weaving of QR code and logos” was highlighted as the one that will fetch the requirement of genuine handloom products. The next step of the QFD process was also implemented to find the fabric and color combinations for designing and weaving QR codes and logos on the product. Such a novel approach to weaving QR code is of the first kind and was implemented successfully on a special product

known as “Banarasi Sari”. Many samples of QR codes were weaved using various combinations. Out of these combinations, QR codes with golden and silver zari were found to be working well.

Chapter 8 addresses the problem introduced in Chapter 4, which is store location. The proximity of stores to tourist destinations enhances access to handloom products, thereby increasing product demand, work availability, and, ultimately, weavers' profits. To achieve this, a facility network was designed using the K-Means clustering and Elbow method. Such kind of facility design not only increases the direct contact of the customer but also helps the weavers implement AR and Omnichannel types of technology.

Chapter 9 addresses one of the major problems highlighted in Chapter 3, namely the health of weavers. Weaving is a tedious task that requires weavers to sit on a plain plank or seat for more than eight hours, often in various working postures. Due to these conditions, the health of weavers is adversely affected. This chapter aims to identify Musculoskeletal Disorders (MSD) pain in different parts of the weavers' bodies, design a new seat tailored to pit loom weavers using anthropometric data, and validate the designed seat by comparing MSD pain levels before and after its implementation of such new design seat/plank.

Chapter 10 provides a summary of the research work and concludes the outcome of the research undertaken. It also presents the scope for further research that can be undertaken in the future as an extension of the present work.
