

LIST OF TABLES

Table-1.1	Work carried out for the award of PhD degree previously in the Department.....	7
Table-1.2	Information on the subjects (melting area) collected from published articles of the different Journals.....	7-9
Table-1.3	Information on the subjects collected from published articles of the different Journals.....	10-17
Table-2.1	Chemical Analysis of Iron Ore & Lime.....	30
Table-2.2	Chemical Analysis of Pig Iron.....	30
Table-2.3	Proximate Analysis of Coal	31
Table-3.1	Theoretical Composition of the iron ore flux pellets.....	355
Table-3.2	Properties of hardened flux pellets for different hardening temperature	40
Table-3.3	Crushing strength of different phase.....	43
Table-4.1	Chemical composition of fluxed iron ore pellets.....	50
Table 4.2	Shows the calculation for % Reduction & %Metallization for the reduced flux iron ore pellets of basicity from 2 to 8 at different temperature and time.....	56-567
Table 4.3	Models used to calculate the Activation Energy.....	677
Table 4.4	Calculation based on different Model values with respect to time for reduction...	68-689
Table 4.5	R ² Values for different modals used to calculate activation energy	70
Table-4.6	k values and Activation Energy for different basicity	722
Table-5.1	Weight of reduced flux pellets days wise and their respective changes in weight days wise	788
Table 5.2	Percent moisture gain of reduced flux pellets during studying.....	799
Table 5.3	Diameter of reduced pellets and their respective volume.	80
Table.5.4	Change in volume of reduced pellets due to weathering effect.	81
Table-5.5	List of possible reactions occurred during weathering process	877
Table-6.1	Chemical composition of iron ore, lime and DRI.....	944
Table-6.2	Charge mix used for different heats in melting	966
Table-6.3	Chemical analysis of different heat products using different %R fluxed DRI	977
Table-6.4	Chemical analysis of different heat products after 25 minute reaction time	977
Table-6.5	Comparative study of the present work product with established alloy	103103
Table-6.6	Charge mix used for different heats in melting	110
Table-6.7	Chemical analysis of different heat products after 15 minute reaction time	11111
Table 6.8	Details of the charge mix composition used for different heats.....	1199
Table 6.9	Initial and final elemental analysis of samples (wt. %)	1222
