

*Dedicated to My Parent
&
In the Loving Memory of*

Late Dr Sanjay Kumar Gupta

CERTIFICATE

It is certified that the work contained in the thesis titled "*Pattern Characterization of Trends in Climatic Variables across Northern-Central, India* " by "*NITESH GUPTA*" has been carried out under my/our supervision and that this work has not been submitted elsewhere for a degree.

It is further certified that the student has fulfilled all the requirements of Comprehensive Examination, Candidacy, and SOTA for the award of Ph.D. Degree.

Signature of Supervisor

Supervisor:

Dept. of Civil Engineering

Indian Institute of Technology (BHU)

DECLARATION BY THE CANDIDATE

I, "**NITESH GUPTA**," certify that the work embodied in this thesis is my novel bona fide work and carried out by me under the supervision of "**Late Dr. Sanjay K. Gupta & Prof. P.K.S Dikshit**" from "**July 2015**" to "**July 2021**", at the "**Department of Civil Engineering**," **Indian Institute of Technology (BHU), Varanasi**. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not wilfully copied any other's work, paragraphs, text, data, results, *etc.*, reported in journals, books, magazines, reports dissertations, theses, *etc.*, or available at websites and have not included them in this thesis and have not cited as my own work.

Date:

Signature of the Student

Place: Varanasi

(**NITESH GUPTA**)

CERTIFICATE BY THE SUPERVISOR(S)

It is certified that the above statement made by the student is correct to the best of my/our knowledge.

Note: However, the author may reproduce or authorize others to reproduce material extracted verbatim from the thesis or derivative of the thesis for the author's personal use provided that the source and the Institute's copyright notice are indicated.

ACKNOWLEDGEMENT

It is a great privilege for me to submit my thesis in the garden of "*Baba Vishwanath*" and "*Tapobhumi*" of Bharat Ratna *Pt. Madan Mohan Malviya*.

This thesis, the conclusion of several years' work, is a result that I could not have achieved without the support of many people to whom I would like to express my gratitude.

Firstly, I express my sincere gratitude and indebtedness to my venerated teacher and supervisor, *Late Dr. Sanjay K. Gupta*, whose encouragement, guidance, and support throughout the study at the Department of Civil Engineering, Indian Institute of Technology (BHU), from the initial stage to completion of this work enabled me to develop a thorough understanding of the subject. It is a great honor for me to work under his extraordinary and charismatic personality. His in-depth knowledge, inspiration, energy, and effort have tremendously helped me carrying out my research work. I cannot find words to express my gratitude for his splendid supervision. I will lifelong remain indebted to my brilliant supervisor *Late Dr. Sanjay K. Gupta*.

I would like to express my gratitude towards *Prof. P. K. S. Dikshit*, Department of Civil Engineering, Indian Institute of Technology, Banaras Hindu University, Varanasi, for their valuable suggestions and kind encouragement during my association with their research group.

I would like to offer my whole-hearted indebtedness to my family. I wish to express my deep and heartiest gratitude to my parent *Mr. Rajesh* and *Mrs. Vimla*, who taught me the value of learning. The constant encouragement and untiring inquiries about my work progress by elder sister *Mrs. Rashmi* and brother-in-law *Mr. Dhiraj* and younger sister *Sneha*, and my better half, *Mrs. Riya*, gave me extra strength and moral support for doing better and better.

I shall remain thankful to the RPEC members, *Prof. Subir Das* and *Prof. K.K. Pathak*.

The cooperation, moral support, and constant encouragements that I have always received from my colleagues Dr. Ravi, Dr. Padam, Mr. Rahul Soni, Ms. Shivani Gond, Mr. Ahin Banerjee, Mr. Bhupendra Singh Rana, and Dr. Satyajit. We have a wonderful time together.

I want to convey my sincere thanks to Mr. Jitendra Patel for his precious time, support, and assistance. I sincerely thank to Nature, who taught me how to be strong, live, and dream in the toughest times and always endorsed my determination.

I am also thankful to MHRD for providing financial assistance during my research work.

Lastly and above all, deeply grateful to the invisible yet present helping hands of *Lord Shiva*, with which he has made my life complete and full of meaning.

Nitesh Gupta..

Nitesh Gupta

PREFACE

The main motivation for writing this thesis is a profound interest in development and climate change research. The question of how to address the impacts of climate change on development is a challenging and vital area of theoretical and applied research. The aim of the two individual papers in the Ph.D. thesis is to address this aspect from different angles. The emphasis is on how climate change impacts will influence rural livelihoods and existing and ongoing development programs, projects, and planning efforts. Additionally, it is explored how adaptation to climate change can be considered in the context of general development efforts to ensure sustainable development paths.

Urbanization is trending in today's world; it is estimated that more than half the world's population would migrate to cities in the next thirty years. Water comes under the most critical natural resources on Earth, supporting plant and animal life. Water problems in India are stressed due to rising population and climate change. The studies showed that the changing climate and intense human activities would complicate the situation endangering these natural resources. So being an engineer, it is our responsibility to provide clean, healthy and sustainable sources of the primary resources to our next generations. To support sustainable uses of water, an appropriate model is required, and it is essential to know the behavior of the trend.

The north-central part of India is extremely affected by climate change, and the Ganges River basin, the most crucial river for such regions, is stressed by extreme anthropogenic activities. Therefore, in this thesis, the study area is two northern Indian states, Uttar Pradesh and Jharkhand, which is also a part of the Ganges River catchment covers. Data used in this work are daily, monthly, and yearly meteorological data from 1901 to 2018, Digital. The software used in the present work is MATLAB, a mathematical tool for programming, ArcGIS 10.5

for digitizing the Spatio-temporal maps. The non-parametric methods and equation Mann-Kendall, Spearman rho, Sen's slope method, and linear regression technique were used in the trend analysis. Before the application of the methods, the obtained time series data has been properly analyzed. As the first step of modeling, the basics of trend have been understood, and then the Novel tool has been developed, Variable Sized Cluster Analysis (VSCA).

A novel analysis procedure referred to as variable-sized cluster analysis (VSCA) was developed to identify trends and change points in precipitation time series. The procedure involved station-scale rainfall data of 118 years from eighteen divisional districts of Uttar Pradesh (UP) and five divisional districts of Jharkhand, India. In contrast with the traditional Mann Kendall (MK) test, which yields a monotonic trend for the whole span of time, VSCA enables to detection of multiple change points while characterizing the pattern of precipitation trends over the historical time period. The Pettit Mann Whitney (PMW) test was also modified to graphically represent multiple change points which confirmed the results of VSCA. Thus, VSCA demonstrated the unified strength of MK and PMW tests. The 3-D figures, drawn for visualizing the changing trend of precipitation, utilized a 118-year long time series dataset with the minimum size of data cluster as 10, which resulted in the right triangular shape of the graphs due to the repeated application of MK test to variable-sized data clusters.

In the last step of this research, an analysis of the impact of climate change was done, and preventive measures are suggested to reduce anthropogenic activities.

A major part of the thesis has been published and accepted in the SCI-indexed Journals like the Journal of Hydrologic Engineering (ASCE), Earth Systems and Environment (published), and Arabian Journal of Geosciences (under review).
