CHAPTER 1 INTRODUCTION AND LITERATURE REVIEW	1
1.1 Introduction.....	1
1.2 Literature review.....	4
1.2.1 Overview of additive manufacturing	4
1.2.2 Classification of additive manufacturing processes for metals.....	6
1.2.2.1 Sheet lamination or laminated object manufacturing (LOM)	7
1.2.2.2 Powder bed fusion system	8
1.2.2.3 Powder feed systems or direct energy depositions (DED).....	10
1.2.2.4 Wire arc additive manufacturing (WAAM)	11
1.2.3 Metallic materials for additive manufacturing	12
1.2.4 Ti-6Al-4V alloy fabricated by conventional and additive manufacturing processes	14
1.2.4.1 Effect of build orientation and heat treatment on microstructure and mechanical properties of additively manufactured Ti-6Al-4V alloy.....	15
1.2.4.2 Surface characteristics of L-PBF Ti-6Al-4V alloy in dry, wet, and cryogenic environments.....	20
1.2.4.2.1 Polishing	22
1.2.4.2.2 Electropolishing	24
1.2.4.2.3 Abrasive flow machining	25

1.2.4.2.4	Abrasive blasting/bead blasting.....	26
1.2.4.2.5	Abrasive finishing/grinding.....	27
1.2.4.3	Corrosion properties of L-PBF Ti-6Al-4V alloy.....	31
1.2.4.4	Wear and biological behaviour of L-PBF Ti-6Al-4V alloy.....	35
1.2.4.4.1	Wear behaviour of L-PBF Ti-6Al-4V alloy.....	35
1.2.4.4.2	Biological behaviour of L-PBF Ti-6Al-4V alloy.....	40
1.2.4.5	Modelling and simulation of additively manufactured Ti-6Al-4V alloy.....	41
1.3	Research gaps identified from the literature review	45
1.4	Objectives.....	47
CHAPTER 2 MATERIALS AND METHODS.....		49
2.1	Microstructure and mechanical properties of additively manufactured (AM) Ti-6Al-4V alloy .	49
2.1.1	Materials and fabrication of components.....	50
2.1.2	Heat treatment	52
2.1.3	Morphological analysis.....	53
2.1.4	Microhardness	53
2.1.5	Residual stress	54
2.1.6	Microstructure analysis.....	54
2.1.7	Mechanical properties.....	55
2.2	Surface characteristics of additively manufactured Ti-6Al-4V alloy.....	55
2.2.1	Surface grinding experimental setup	55
2.2.2	Microstructure of AM and conventional samples before grinding operation	58
2.2.3	Grinding forces.....	59
2.2.4	Temperature.....	60
2.2.5	Surface roughness after finishing	60
2.2.6	Surface morphology and grinding chip morphology	60
2.2.7	Microhardness	61
2.3	Corrosion behaviour of additively manufactured Ti-6Al-4V alloy	61

2.3.1	Corrosion experimental setup.....	61
2.3.2	Corrosion rate measurement.....	61
2.3.3	Electrochemical impedance spectroscopy (EIS).....	62
2.3.4	X-ray photon spectroscopy (XPS) analysis.....	63
2.4	Wear and biological behaviour of additively manufactured Ti-6Al-4V alloy	63
2.4.1	Wear experimental setup	63
2.4.2	Biological test.....	65

**CHAPTER 3 MICROSTRUCTURE AND MECHANICAL PROPERTIES OF
ADDITIVELY MANUFACTURED TI-6AL-4V ALLOY67**

3.1	Results and discussion	67
3.1.1	Characterization of powder	67
3.1.2	Density	67
3.1.3	Surface roughness.....	70
3.1.4	Microhardness	70
3.1.5	Residual stress	72
3.1.6	Microstructure of as-built and heat-treated L-PBF Ti-6Al-4V alloy	74
3.1.7	Texture.....	82
3.1.8	Strength properties of as-built and heat-treated L-PBF Ti-6Al-4V specimens.....	87
3.1.9	Fractography of as-built and heat-treated samples	92

**CHAPTER 4 SURFACE CHARACTERISTICS OF ADDITIVELY
MANUFACTURED TI-6AL-4V ALLOY.....97**

4.1	Results and Discussion.....	97
4.1.1	Grinding forces.....	97
4.1.2	Specific grinding energy and force ratio	99
4.1.3	Temperature.....	101
4.1.4	Surface roughness of finished L-PBF Ti-6Al-4V alloy	103

4.1.5	Surface roughness of finished AM and conventional samples	105
4.1.6	Surface morphology of finished L-PBF Ti-6Al-4V alloy	107
4.1.7	Surface morphology of finished AM and conventional samples	111
4.1.8	Microhardness of finished L-PBF Ti-6Al-4V alloy	115
4.1.9	Microhardness of finished AM and conventional samples	116
4.1.10	Bearing area curve of finished AM and conventional samples	117
4.1.11	X-ray diffraction analysis of finished AM and conventional samples under different conditions	118
4.1.12	Effect of grinding media on subsurface layer of the finished AM and conventionally manufactured samples.....	120
4.1.13	Grinding chip morphology.....	121
4.1.14	Optimization with regression modelling.....	123

CHAPTER 5 CORROSION BEHAVIOUR OF ADDITIVELY MANUFACTURED TI-6AL-4V ALLOY..... 127

5.1	Results and discussion	127
5.1.1	Electrochemical analysis of as-built and heat-treated AM samples.....	127
5.1.2	XPS analysis of the surface layer of AB and HT samples	134
5.1.3	Microstructure analysis of the samples after corrosion test	136
5.1.4	Corrosion rate measurement of conventional and AM samples in different orientations	138
5.1.5	Electrochemical impedance spectroscopy (EIS) of samples in different orientations	142
5.1.6	XPS analysis of the surface layer of the conventional and AM samples in different orientations... ..	148
5.1.7	Microstructural analysis of the samples after corrosion test in different orientations	153

CHAPTER 6 WEAR AND BIOLOGICAL BEHAVIOUR OF ADDITIVELY MANUFACTURED TI-6AL-4V ALLOY... 157

6.1	Results and discussion	157
6.1.1	Wear track depth and wear rate.....	157

6.1.2	Coefficient of friction (COF).....	162
6.1.3	Microstructural characterization of the wear track surfaces of the conventional and AM samples.....	165
6.1.4	Microstructural characterization of worn surfaces of counter zirconia ball	177
6.1.5	Raman analysis of wear surfaces of the conventional and L-PBF samples in different orientations	179
6.1.6	Biocompatibility of L-PBF Ti-6Al-4V samples fabricated in three different orientations	184
CHAPTER 7 CONCLUSIONS AND FUTURE SCOPES.....		187
7.1	Conclusions.....	187
7.1.1	Microstructure and Mechanical Properties of Additively Manufactured Ti-6Al-4V Alloy	187
7.1.2	Surface Characteristics of Additively Manufactured Ti-6Al-4V Alloy	188
7.1.3	Corrosion Behaviour of Additively Manufactured Ti-6Al-4V Alloy.....	190
7.1.4	Wear and Biological Behaviour of Additively Manufactured Ti-6Al-4V Alloy	191
7.2	Future scopes.....	193
References.....		195
List of publications.....		211
