

Table of Contents

Contents/Chapters	Page No.
List of Figures	xv
List of Tables	xviii
Abbreviations	xx
Preface	xxiii
1. Introduction	1
2. Literature Review	10
2.1. Botanical description of <i>Berberis aristata</i>	11
2.2. Phytochemistry	13
2.3. Antimicrobial activity	15
2.4. Anti-Inflammatory Effects	16
2.5. Antioxidant Potential	17
2.6. Hepatoprotective Effects	19
2.7. Antidiabetic Properties	20
2.8. Anticancer properties of <i>Daruharidra</i>	22
2.9. Mode of action of phytochemicals in daruharidra	26
2.10. Effect of solvents on extraction of flavonoid and alkaloid from plant source.	27
3. Extraction and characterization of phytoconstituents from daruharidra (<i>Berberis aristata</i>) extract.	30
3.1 Background of research	31
3.2 Introduction	31
3.3 Methodology	32
3.3.1 Plant material collection and authentication, Chemical utilized	32

3.3.2 Preparation of sample and Sequential Solvent Extraction	32
3.3.3 Phytochemical screening-	33
3.3.4 Extractive value determination-	34
3.3.5 Total phenolic content	34
3.3.6 Total flavonoid content	35
3.3.7 Total alkaloid content	35
3.3.8 DPPH Radical scavenging Activity	36
3.3.9 Antioxidant assay by Superoxide Dismutase	36
3.3. 10 Investigations of phytoconstituents by Chromatography techniques	37
3.3.11 HPLC study condition	37
3.3.12 CHNS and FTIR studies	38
3.4 Results and discussion	38
3.4.1 Extraction and phytochemical screening	38
3.4.2 Total phenol and flavonoid content	40
3.4.3 Total alkaloid content	41
3.4.4 DPPH radical scavenging assay	41
3.4.5 Antioxidant assay by superoxide dismutase	42
3.4.6 Chromatography	43
3.5 Conclusions	53
4. <i>In vitro</i> and <i>in silico</i> interaction of α-amylase and α- glucosidase with <i>Daruharidra</i> extract and evaluation of antidiabetic activity.	54
4.1 Background of research	55
4.2 Introduction	56
4.3 Methodology	58
4.3.1 Chemicals utilized	58

4.3.2 Percentage Glucose uptake through yeast plasma membrane	58
4.3.3 Inhibitory effect of daruharidra extract on alpha-amylase inhibition	58
4.3.4 Mode of inhibition of alpha-amylase	59
4.3.5 Inhibitory activity of daruharidra extract on alpha-Glucosidase enzyme.	60
4.3.6 Mode of inhibition assay for alpha glucosidase	60
4.3.7 Docking of alpha-amylase on HRLC/MS screened ligands	61
4.3.8 Molecular dynamic simulation studies of PIF1 and docked ligands	61
4.3.9 Docking of phytochemicals hits found in HRLCMS on alpha-glucosidase	62
4.3.10 Molecular dynamic simulation studies of 5KZX and ligands	63
4.3.11 Drug likeness prediction/ ADMET analysis	64
4.4 Results and discussion	65
4.4.1 Percentage glucose absorption by yeast cells	65
4.4.2 Alpha-amylase inhibition	66
4.4.3 Docking studies on alpha-amylase	68
4.4.4 Simulation studies on alpha-amylase	69
4.4.5 Alpha-glucosidase enzyme inhibition by daruharidra extract	74
4.4.6 Analysis phytoconstituents for their drug likeness prediction by ADMET Test	76
4.4.7 Molecular Docking of enzyme 5KZX with HRLCMS encountered ligand	77
4.4.8 Simulation studies	79
4.5 Conclusion	85

5.0 Development of Biogenic Cadmium sulfide nanoparticles using Daruharidra and its application as anticancer agent	86
5.1 Background	86
5.2 Introduction	88
5.3 Methodology	90
5.3.1 Materials utilized	90
5.3.2 Preparation of solvent extract	91
5.3.3 Development of biogenic DH-CdSNP	91
5.3.4 Surface characterization and analysis of DH-CdSNP	92
5.3.5 Bactericidal effects and minimum inhibitory concentration of DH-CdSNP	93
5.3.6 Anticancer potential of DH-CdSNP	95
5.3.6.1 MTT Assay analysis for cytotoxic activity of DH-CdSNP	95
5.3.6.2 Assessment of cell cycle by flow cytometry	95
5.3.6.3 Assessment of cell death by DH-CdSNP	96
5.4. Results and discussions	97
5.4.1 Surface characterization of nanoparticles	97
5.4.2 Bactericidal activity and Minimum inhibitory concentration of DH-CdSNP	101
5.4.3 MTT assay for testing cytotoxicity of nanoparticles on breast and ovarian cancer cell line	104
5.4.4 Apoptotic cell death assessment	107
5.4.5 Flow cytometry assessment of cell cycle	109
5.5. Conclusion	110
6.0 Understanding regulatory mechanism of anticancer potential of CdS NPs using transcriptomics studies	112

6.1 Background	113
6.2 Introduction	114
6.3 Methodology	117
6.3.1 Total RNA Extraction, Qualitative and Quantitative analysis	117
6.3.2 Nano drop analyses	118
6.3.3 Quantity and quality check (QC) of library on Agilent 4200 Tape Station	120
6.3.4 Cluster Generation and Sequencing	120
6.4. Results and Discussion	121
6.4.1 RNA Quality and Quantity Assessment	122
6.4.2 RNA sequencing and identification of DEGs in Cancer cell line treated with CdS NP	122
6.4.2.1 Volcano plot	123
6.4.3 GO (Gene Ontology) Enrichment Analysis of DEGs	130
6.4.4 KEGG analysis of DEGs	133
6.5. Conclusion	138
7.0 Studying the effects of Berbamine hydrochloride on the expression of pro- inflammatory markers and its scratch healing potential.	139
7.1 Background	140
7.2 Introduction	141
7.3 Methodology	145
7.3.1 Anti-inflammatory assay on THP1 cells	144
7.3.2 Analyzing COX-2 and TNF- α expression by Flow cytometry	146
7.3.3 Scratch healing in L929 cells	147

7.4 Results and Discussion	149
7.4.1 COX-2 Expression	149
7.4.2 TNF α expression	151
7.4.3 Cell migration and scratch healing	152
7.4.4 Analysis of cell migration in L929 cells	154
7.5 Conclusions	154
8.0. Overall Conclusion and Future Perspective	157
8.1. Overall Conclusions	158
8.2. Future Perspectives	159
9.0. References	
List of Publications
