

Table of contents

Preface	xiii
List of figures	xxiii
List of tables	xxxv
1 Introduction and literature review	1
1.1 Motivation for the thesis	1
1.2 Overview of ferroelectricity	2
1.2.1 Characteristics of ferroelectricity and other related phenomena: Piezoelectricity and Pyroelectricity	3
1.3 Perovskite structure (ABO_3)	7
1.3.1 Theories to explain ferroelectricity in perovskite materials	8
1.3.2 Soft phonon modes and their role in structural phase transitions	10
1.4 Compositional Engineering	12
1.4.1 Polymorphic phase boundary (PPB) and Morphotropic phase boundary (MPB)	13
1.4.2 Relaxor ferroelectrics	16
1.5 Literature review on some Pb-free functional materials	25
1.5.1 $KNbO_3$	25
1.5.2 $NaNbO_3$	26

1.5.3	(K,Na)NbO ₃	27
1.5.4	(Ba,Sr)TiO ₃	29
1.5.5	(K,Na,Ba)(Nb,Ti)O ₃	31
1.6	Organization of the thesis	32
2	Experimental procedure and characterization techniques	35
2.1	Sample synthesis	35
2.1.1	Solid-state reaction method	35
2.2	Characterization techniques	37
2.2.1	X-ray diffraction method	38
2.2.2	Neutron diffraction method	39
2.2.3	Microstructure measurement	43
2.2.4	Dielectric measurements	44
2.2.5	Ferroelectric characterization (P-E loop measurements)	47
2.2.6	Raman spectroscopic measurements	48
2.2.7	Pair Distribution Function method	52
3	Reinvestigating atomic ordering in K_{0.5}Na_{0.5}NbO₃ and its impact on ferroelectric properties	55
3.1	Introduction	55
3.2	Experimental procedure	58
3.3	Results and discussions	59
3.3.1	Long Range Order in KNN _x	59
3.3.2	Raman Analysis of KNN _x ceramics	64
3.3.3	Short Range Order in KNN _x	67
3.3.4	Frozen phonon mode of KNN _x	73
3.4	Conclusion	77

4	Emergence of a long-range ferroelectric order from a polar order at short ranges in a $\text{K}_{0.5}\text{Na}_{0.5}\text{NbO}_3$-based smart solution	79
4.1	Introduction	79
4.2	Experimental procedure	82
4.3	Result and discussion	84
4.3.1	X-ray diffraction analysis of KBST_x ceramics	84
4.3.2	Dielectric analysis of KBST_x ceramics	87
4.3.3	SXRD analysis of KBST_5 ceramics at elevated temperatures	91
4.3.4	Frozen phonon mode approach	93
4.3.5	Raman study of KBST_x ceramics	95
4.3.6	Temperature-dependent Raman study of KBST_5 ceramics	99
4.3.7	PDF analysis of KBST_5 ceramics at elevated temperatures	102
4.4	Conclusion	106
5	Origin of zero thermal expansion in an average cubic structure in a Pb-free relaxor ferroelectrics	109
5.1	Introduction	109
5.2	Experimental procedure	111
5.3	Result and discussion	112
5.3.1	Neutron Diffraction analysis	112
5.3.2	Dielectric and P-E loop analysis	116
5.3.3	Raman scattering analysis	119
5.4	Conclusions	122
6	Evidence of distinct (nonpolar/polar) ordering at long/short ranges in relaxor ferroelectrics	123
6.1	Introduction	123

6.2	Experimental procedure	126
6.3	Results and discussions	128
6.3.1	XRD analysis of KBST x ceramics for $0.90 \leq x \leq 1.00$	128
6.3.2	Microstructure analysis of KBST90 ceramics	130
6.3.3	Dielectric and PE loops of KBST x ceramics for $0.90 \leq x \leq 1.00$	131
6.3.4	SXRD analysis and zero thermal expansion in KBST90 ceramics	134
6.3.5	Raman analysis of KBST90 ceramics	136
6.3.6	PDF analysis of KBST90 ceramics	138
6.3.7	Frozen phonon mode approach	141
6.4	Conclusion	144
7	Multiple local symmetries triggering zero/negative thermal expansion in morphotropic relaxor boundary	147
7.1	Introduction	147
7.2	Experimental procedure	149
7.3	Results and discussions	150
7.3.1	X-ray diffraction analysis of KBST x ceramics	150
7.3.2	Raman spectroscopic studies	153
7.3.3	Pair distribution function analysis of KBST40 ceramics	156
7.3.4	Synchrotron X-ray diffraction analysis of KBST40 ceramics	161
7.3.5	Morphotropic Relaxor Boundary in KBST x ceramics	163
7.4	Conclusion	164
8	Summary and future work suggestions	167
8.1	Summary	167
8.2	Future work suggestions	173
	References	175
