| <b>List of Figures</b>  | <b>xi</b>   |
| <b>List of Tables</b>   | <b>xiii</b> |
| <b>List of Symbols</b>  | <b>xv</b>   |
| <b>List of Abbreviations</b>  | <b>xvii</b> |
| <b>Preface</b>  | <b>xix</b>  |
| <b>1 Introduction</b>   | <b>1</b>    |
| 1.1 Research Objectives . . . . .                                     | 6           |
| 1.2 Motivation Behind this Work . . . . .                             | 7           |
| 1.3 Contribution and Organization of the Thesis . . . . .             | 7           |
| <b>2 Preliminaries and Related Work</b>                               | <b>13</b>   |
| 2.1 Containerization Technologies Overview . . . . .                  | 13          |
| 2.1.1 Docker . . . . .  | 13          |
| 2.1.2 Docker Swarm as Container Orchestration . . . . .               | 18          |
| 2.1.3 Kubernetes . . . . .  | 19          |
| 2.2 Artificial Intelligence in Task Optimization . . . . .            | 20          |
| 2.2.1 Federated Learning . . . . .                                    | 22          |
| 2.2.2 Machine Learning Techniques . . . . .                           | 23          |
| 2.2.3 Key Concepts in Machine Learning Techniques . . . . .           | 23          |
| 2.2.4 Applications of Machine Learning Technique . . . . .            | 24          |
| 2.2.5 Benefits of Machine Learning Techniques . . . . .               | 25          |
| 2.2.6 Challenges of Machine Learning Techniques . . . . .             | 25          |
| 2.3 Deep Learning for Workload Prediction . . . . .                   | 25          |
| 2.3.1 Key Concepts in Deep Learning for Workload Prediction . . . . . | 26          |

|          |   |           |
|----------|---|-----------|
| 2.3.2    | Applications of Deep Learning in Workload Prediction . . . . .    | 26        |
| 2.3.3    | Benefits of Deep Learning in Workload Prediction . . . . .        | 27        |
| 2.3.4    | Challenges . . . . .  | 27        |
| 2.4      | The Game Approach: A Framework for Decision-Making . . . . .      | 28        |
| 2.4.1    | Key Concepts in the Game Approach . . . . .                       | 28        |
| 2.4.2    | Types of Games . . . . .  | 29        |
| 2.4.3    | Applications of the Game Approach . . . . .                       | 30        |
| 2.4.4    | Benefits of the Game Approach . . . . .                           | 30        |
| 2.4.5    | Challenges . . . . .  | 31        |
| 2.5      | High Performance Clustering . . . . .                             | 31        |
| 2.5.1    | Key Principles of High-Performance Clustering . . . . .           | 32        |
| 2.5.2    | Parallel Computing: Transforming Speed and Efficiency . . . . .   | 34        |
| 2.5.3    | The Essence of Parallel Computing . . . . .                       | 34        |
| 2.5.4    | Fundamental Principles of Parallel Computing . . . . .            | 34        |
| 2.5.5    | Parallel Computing Applications . . . . .                         | 35        |
| 2.5.6    | Distributed Systems . . . . .                                     | 36        |
| 2.5.7    | The Essence of Distributed Systems . . . . .                      | 36        |
| 2.5.8    | Fundamental Principles of Distributed Systems . . . . .           | 36        |
| 2.5.9    | Distributed Systems Applications . . . . .                        | 37        |
| 2.6      | Cluster Architecture . . . . .                                    | 38        |
| 2.6.1    | The Essence of Cluster Architecture . . . . .                     | 38        |
| 2.6.2    | Key Principles of Cluster Architecture . . . . .                  | 38        |
| 2.6.3    | Applications in Diverse Sectors . . . . .                         | 39        |
| 2.7      | Challenges at the Intersection . . . . .                          | 40        |
| <b>3</b> | <b>Secure Task Containerization with Deadline Constraint</b>      | <b>43</b> |
| 3.1      | Introduction . . . . .  | 44        |
| 3.1.1    | Major Contribution . . . . .                                      | 46        |
| 3.2      | Background and Motivation . . . . .                               | 48        |
| 3.2.1    | Host Machine Dependent . . . . .                                  | 48        |
| 3.2.2    | Host Machine Independent . . . . .                                | 48        |
| 3.2.3    | Motivation . . . . .  | 48        |
| 3.3      | System Model and Preliminaries . . . . .                          | 49        |
| 3.4      | Solution of $(\alpha, \beta)$ -TC Problem . . . . .               | 51        |
| 3.4.1    | Estimation of Optimal Price for Containerizing the Task . . . . . | 51        |
| 3.4.2    | Estimation of Fraction of Task Assigned to Each WM . . . . .      | 56        |

|          |   |           |
|----------|---|-----------|
| 3.4.3    | Implementation of the Solution . . . . .  | 58        |
| 3.5      | Empirical Evaluation . . . . .  | 59        |
| 3.5.1    | Experimental Setup and Baseline Schemes . . . . .                                       | 59        |
| 3.5.2    | Experimental Evaluation . . . . .   | 60        |
| 3.6      | Conclusion and Discussion . . . . .   | 66        |
| <b>4</b> | <b>Containerization-based Federated learning for Privacy-Preserving Task Offloading</b> | <b>67</b> |
| 4.1      | Introduction . . . . .  | 68        |
| 4.2      | Preliminary and System Model . . . . .  | 71        |
| 4.3      | Patient Monitoring System using FL in IoMT . . . . .                                    | 72        |
| 4.3.1    | Clustering of Participants in Federation . . . . .                                      | 72        |
| 4.3.2    | Generation of Different Models at the Server . . . . .                                  | 74        |
| 4.3.3    | KD-based Training of Lightweight Model . . . . .  | 75        |
| 4.3.4    | Cluster-wise Aggregation . . . . .  | 79        |
| 4.4      | Experimental Evaluation and Results . . . . .   | 80        |
| 4.4.1    | Existing Datasets . . . . .   | 81        |
| 4.4.2    | Parameter Setting During Implementation . . . . .                                       | 82        |
| 4.4.3    | Experimental Results . . . . .  | 82        |
| 4.5      | Conclusions and Future Work . . . . .   | 85        |
| <b>5</b> | <b>Optimized Container Selection Using Shared Memory Architecture</b>                   | <b>87</b> |
| 5.1      | Introduction . . . . .  | 87        |
| 5.2      | Research Work . . . . .   | 89        |
| 5.3      | Architecture . . . . .  | 89        |
| 5.4      | Model Workflow . . . . .  | 93        |
| 5.4.1    | Model Initialization . . . . .  | 93        |
| 5.4.2    | Local Model Training . . . . .  | 93        |
| 5.4.3    | Model Aggregation . . . . .   | 94        |
| 5.5      | Methodology . . . . .   | 96        |
| 5.6      | Containerized federated learning approach . . . . .                                     | 99        |
| 5.7      | Experimental Setup . . . . .  | 101       |
| 5.8      | Results and discussion . . . . .  | 101       |
| 5.8.1    | Visualization of Data Privacy Constraints . . . . .                                     | 102       |
| 5.8.2    | Impact of Number of Tasks on Memory for Loading OS . . . . .                            | 103       |
| 5.8.3    | Impact of Number of Tasks on Memory Utilization . . . . .                               | 104       |
| 5.9      | Conclusion and discussion . . . . .   | 106       |
