List of Abbreviations	xvi
Preface	xvii
1 Introduction	1
1.1 Mathematical formulation of multiobjective optimization problem . . .	3
1.2 Pareto optimality	4
1.3 Performance metrics and test functions	7
1.3.1 Hypervolume (HV)	8
1.3.2 Generational distance (GD)	8
1.3.3 Inverted generational distance (IGD)	8
1.4 Methods to solve MOPs	9
1.4.1 Classical methods	9
1.4.2 Scalarization techniques	10
1.5 Motivation and objective of the thesis	13
1.6 Literature review of interior-point methods	14
1.7 Organization of the thesis	17
2 An Infeasible Interior-point Method to Generate the Nondominated Sets for Multiobjective Optimization Problems	21
2.1 Introduction	21
2.2 Motivation	22
2.3 Contributions	23

2.4	Cone method	24
2.5	Analysis of (2.2) based on the infeasible interior-point method	25
2.6	Algorithm for convex multiobjective optimization	31
2.6.1	Merit functions	31
2.6.2	Choice of the barrier parameter μ	36
2.6.3	Choice of the step length	36
2.6.4	Choice of the initial point	37
2.6.5	Well-definedness of Algorithm 1	40
2.6.6	Convergence analysis	41
2.6.7	Measures of progress	41
2.7	Algorithm for nonconvex multiobjective optimization problems	50
2.7.1	Determination of λ	53
2.7.2	Well-definedness of Algorithm 3	55
2.8	Computational tests	61
2.8.1	Performance metrics and relative efficiency	64
2.9	Conclusion	69
3	A Newton-type Globally Convergent Interior-Point Method to Solve Multiobjective Optimization Problems	71
3.1	Introduction	71
3.2	Motivation	72
3.3	Contributions	72
3.3.1	Description of the cone method associated to MOP (3.1)	73
3.4	Interior-point method	74
3.5	Computation of step size	80
3.6	Merit function	80
3.7	Descent direction	82
3.8	Sufficient decrease	84
3.9	Update of the penalty parameter	85
3.10	Description of the initial point and the barrier parameter	85
3.11	Global convergence results	86
3.12	Numerical experiments	92
3.13	Performance metrics	92
3.14	Performance of the Algorithm 4 on some test problems	93
3.15	Conclusion	98

4	A Primal-dual Interior-point Technique to Solve Multiobjective Optimization Problems with an Application to Optimal Control Problem	99
4.1	Introduction	99
4.2	Motivation	100
4.3	Contributions	100
4.4	Description of the algorithm	101
4.5	Summary of the primal-dual interior-point algorithm	102
4.6	Newton method	104
4.6.1	Summary of the algorithm	107
4.7	Numerical results and application	109
4.7.1	Carbon dioxide emission model with control	112
4.8	Formulation of an optimal control problem	113
4.9	Multiobjective approach to the optimal control problem (4.24)	114
4.10	Numerical results	116
4.11	Conclusion	118
5	A Trust-region Interior-point Technique to Solve Multiobjective Optimization Problems and its Application to a Tuberculosis Optimal Control Problem	121
5.1	Introduction	121
5.2	Motivation	122
5.3	Contributions	122
5.4	Pascoletti-Serafini scalarization technique	123
5.5	Interior-point method with trust-region strategy	124
5.6	Step computation	126
5.7	Choice of Lagrange multipliers and merit function	128
5.8	Well-definedness of Algorithm 6	131
5.9	Numerical results and application	134
5.10	Optimal control of a tuberculosis model	136
5.11	Optimal control problem formulation	137
5.12	Multiobjective approach to the optimal control problem (5.29)	138
5.13	Algorithm	139
5.14	Numerical results	140
5.15	Conclusion	142
6	A New Trust Region Method for Nonsmooth Multiobjective Optimization	143
6.1	Introduction	143
6.2	Motivation	144

6.3	Contributions	144
6.3.1	Motivation	147
6.4	Trust-region algorithm and its convergence analysis	150
6.5	Numerical tests	157
6.6	Conclusion	158
7	Conclusion and future directions	159
7.1	General conclusions	159
7.2	Contribution of the thesis	160
7.3	Future directions	163
