

# TABLE OF CONTENTS

Title	Page No.
<b>Acknowledgements</b>	<b>i-ii</b>
<b>Contents</b>	<b>iii-vi</b>
<b>List of Figures</b>	<b>vii-x</b>
<b>List of Tables</b>	<b>xi-xii</b>
<b>Abbreviations</b>	<b>xiii-xiv</b>
<b>Preface</b>	<b>xv-xvi</b>
<b>CHAPTER 1: INTRODUCTION</b>	<b>1-25</b>
1.1 Properties of Phosphorous	4
1.2 Phosphorous cycle	7
1.3 Adverse effect of phosphate pollution	10
1.4 Phosphate removal methods	13
1.5 Adsorbents used in removal of phosphate from wastewaters	15
1.6 NFC: A versatile biomaterial	16
1.6.1 From Waste-to-Resource: Sugarcane bagasse as a sustainable lignocellulosic source for production of NFC	20
1.6.2 Production methods of nanofibrillated cellulose and its characterization techniques	21
1.7 Motivation	24
1.8 Objectives	25
<b>CHAPTER 2: MATERIALS AND METHODS</b>	<b>26-36</b>
2.1 Materials	26
2.2 Analytical instruments	27
2.2.1 Fourier-transform infrared spectroscopy (FT-IR)	27
2.2.2 Nuclear magnetic resonance spectroscopy (NMR)	27
2.2.3 Dynamic Light Scattering (DLS)	27
2.2.4 Determination of $pH_{PZC}$ and zeta potential of adsorbent	28
2.2.5 Scanning electron microscopy (SEM) and SEM-EDS	28
2.2.6 High Resolution-Transmission electron microscopy (HR-TEM)	29
2.2.7 X-ray diffraction (XRD)	29
2.2.8 Thermogravimetry analysis (TGA) / Differential Thermogravimetric analysis (DTG)	30

2.2.9	BET surface area analysis of adsorbent	30
2.2.10	X-ray photoelectron spectrometry (XPS)	30
2.3	Analytical procedures	31
2.3.1	Compositional analysis of SCB and residual fractions	31
2.3.2	Batch adsorption experiments	31
2.3.2.1	Stability experiments of CTAB@NFC	32
2.3.2.2	Synthesis and evaluation of water-retention capacity of soil with PLC	33
2.3.2.3	Adsorption isotherm	34
2.3.2.4	Adsorption kinetics	34
2.3.2.5	Adsorption thermodynamics	36
<b>CHAPTER 3: PRODUCTION OF NANOFIBRILLATED CELLULOSE FROM LIGNOCELLULOSIC WASTES USING SYNTHESIZED GREEN SOLVENTS AND HIGH INTENSITY ULTRASONICATION AND ITS CHARACTERIZATION STUDIES</b>		<b>37-62</b>
3.1	Introduction	37
3.2	Experimental methodology	38
3.2.1	Production of NFC	38
3.2.2	Synthesis of NADES	39
3.2.3	High intensity ultrasonication assisted two-stage cascade process	39
3.2.3.1	Pretreatment of biomass (cellulose recovery)	39
3.2.3.2	Conversion of cellulose fibres to nanofibrillated cellulose	41
3.3	Synthesis of NADES	42
3.3.1	FT-IR spectrum of synthesized NADES	43
3.3.2	Nuclear magnetic resonance ( <sup>1</sup> H NMR)	45
3.4	Compositional analysis of raw SCB	48
3.5	Experimental design of NFC production	48
3.6	Characterizations and analysis of NFCs	51
3.6.1	FT-IR	51
3.6.2	XRD	52
3.6.3	TGA/DTG	53
3.6.4	DLS	55
3.6.5	TEM	56

3.6.6 SEM and EDX	57
3.7 Conclusions	61
<b>CHAPTER 4: INVESTIGATIONS OF ADSORPTION BEHAVIOR OF NFCs MODIFIED WITH CATIONIC SURFACTANT; CTAB TOWARDS PHOSPHATE REMOVAL FROM WASTEWATER</b>	<b>63-84</b>
4.1 Introduction	63
4.2 Synthesis of cationic NFC	65
4.3 Results and Discussions	66
4.3.1 Characterization of synthesized adsorbent	66
4.3.1.1 SEM AND EDS	66
4.3.1.2 FT-IR	68
4.3.1.3 XRD	69
4.3.1.4 BET analysis	70
4.3.2 Effect of CTAB concentration on phosphate adsorption (pre-screen adsorption studies)	71
4.3.3 Batch adsorption studies	73
4.3.3.1 Effect of adsorbent dose	73
4.3.3.2 Effect of initial solution pH	73
4.3.3.3 Effect of interfering anions on phosphate removal	75
4.3.3.4 Effect of contact time and kinetic studies	77
4.3.3.5 Effect of initial phosphate concentration and isotherm studies	77
4.4 Possible mechanism of phosphate removal on CTAB@NFC	80
4.5 Stability of adsorbent	82
4.6 Conclusions	83
<b>CHAPTER 5: ADSORPTIVE REMOVAL STUDY OF PHOSPHATE FROM WASTEWATER USING MAGNESIUM DOPED NFC/BN COMPOSITE</b>	<b>85-110</b>
5.1 Introduction	85
5.2 Synthesis of NFC/BN composite adsorbent	87
5.3 Results and Discussions	89
5.3.1 Characterization of synthesized adsorbent	89
5.3.1.1 SEM AND EDS	89
5.3.1.2 FT-IR	91
5.3.1.3 XRD	93

5.3.2 Preliminary assessment: Effect of different ratios of NFC and BN in phosphate removal studies	95
5.3.3 Batch adsorption studies	96
5.3.3.1 Effect of initial pH	96
5.3.3.2 Effect of adsorbent dose	98
5.3.3.3 Adsorption kinetic studies	99
5.3.3.4 Adsorption isotherm studies	100
5.3.3.5 Effect of co-existing anions on phosphate removal	102
5.3.3.6 Adsorption thermodynamic studies	104
5.4 Water retention capacity of soil with PLC	105
5.5 XPS studies and proposed adsorption mechanism of phosphate removal	106
5.6 Conclusions	110
<b>CHAPTER 6: CONCLUSIONS AND FUTURE PERSPECTIVES</b>	<b>111-116</b>
Summary and future perspectives	113
