## CHAPTER 1: INTRODUCTION

1.	Motivation and problem statement	1
2	Problems caused by the industrial dye effluents	7
3	Dye	8
3.1	Types of dye	9
3.1.1	Basic dyes (Cationic dye)	10
3.1.2	Methylene blue	11
3.1.3	Rhodamine blue	12
3.1.4	Anionic dyes	13
3.1.5	Acid blue 113	13
3.1.6	Toxicity of dyes	14
3.1.7	Consumption of dye effluents	15
3.2	Nanotechnology towards environmental remediation	16
3.3	Metal oxide nanoparticles	16
3.3.1	g-C <sub>3</sub> N <sub>4</sub> nanomaterial photocatalyst	18
3.3.2	Metal oxide-g-C <sub>3</sub> N <sub>4</sub> nanocomposite photocatalysts	28
3.4	Semiconductor Photocatalysis	32
3.4.1	Heterogeneous photocatalysis towards removal of water contaminant	33
3.5	Different theories of photocatalysis	36
3.5.1	·OH free radical theory	36
3.5.2	The direct oxidation theory	36
3.6	Literature survey of g-C <sub>3</sub> N <sub>4</sub> based photocatalyst	37
3.7	Aims and objectives of this thesis	39

## CHAPTER 2: Preparation and application

1	Introduction	46
2	Setting up and determining elements: making g-C <sub>3</sub> N <sub>4</sub>	58
	2.1 Templating methods	59
	2.2 Template-free methods	60
	2.3 Sol-gel methods	61
	2.4 Exfoliation method	61
	2.5 Supramolecular preorganization method	63
3	Effect of synthesis parameters	64
	3.1 Pyrolysis temperature	65
	3.2 Heating rate	65
	3.3 Solvent	66
	3.4 Precursor	66
4	Modification	67
	4.1 Non-metal heteroatoms doping	68
	4.2 Metal doping	73
	4.2.1 Alkali metal	76
	4.2.2 Transition metal	77
5	Incorporation of g-C <sub>3</sub> N <sub>4</sub> with other materials	77
	5.1 Morphology modulation	78
	5.2 Molecular doping	79
	5.3 Defect engineering	80
6	Environmental applications	80
	6.1 Photo-catalyst	81
	6.2 Water splitting	81
	6.3 NO <sub>x</sub> removal	82
	6.4 CO <sub>2</sub> conversion	83
	6.5 Treatment of emerging contaminants in wastewater	79
	6.6 Fenton-like catalysts	85
	6.7 Adsorbents	86
	6.8 Membrane materials	87
	6.9 Disinfectants	88
7	Mechanism of g-C <sub>3</sub> N <sub>4</sub>	88

## CHAPTER 3 Synthesis of metal doped g-C<sub>3</sub>N<sub>4</sub> and characterization techniques

1	Materials	87
2	Synthesis of g-C <sub>3</sub> N <sub>4</sub>	96
3	Synthesis of metal doped g-C <sub>3</sub> N <sub>4</sub>	97
4	Optimization of synthesis temperature and time	97
5	Characterization techniques	
	5.1 X-ray Diffraction technique	98
	5.1.1 Applications	100
	5.2 Fourier Transform Infrared Spectroscopy	
	5.2.1 Introduction	101
	5.2.2 Experimental setup	102

5.3	Scanning Electron Microscopy	
5.3.1	Principles of scanning electron microscope	104
5.4	Energy dispersive X-ray spectroscopy	
5.4.1	Applications	105
5.5	UV-vis Diffuse Reflectance spectroscopy	
6	Photocatalytic reactor	107

## **CHAPTER 4: Degradation by iron-doped g-C<sub>3</sub>N<sub>4</sub>**

1	Introduction	100
2	Experimental	110
3	Characterization	111
3.1	XRD	111
3.2	FTIR analysis	112
3.3	EDX	114
3.4	BET	114
4	Effect of some operating parameters	118
5	Degradation kinetics	119

## **CHAPTER 5: Summary and future scope**

1	Summary of the work	113
2	Future scope	114
