Copy of Transfer certificate.....	ix
Anti Plagiarism Certificate.....	xi
Acknowledgments.....	xiii
Preface.....	xxxi
Chapter 1:Introduction and literature review.....	1
1.1. Introduction.....	1
1.2. Toxicity and the impact of textile dye	3
1.2.1. Adsorption of anions by the Ion exchange	6
1.2.2. Adsorption of Anions by the Reconstruction Effect.....	7
1.3. Azo Dye	8
1.4. Wastewater Treatment Techniques and Methods	11
1.4.1. Physical method.....	12
1.4.1.1. Adsorption.....	12
1.4.1.2. Filtration.....	17
1.4.2. Chemical methods.....	17
1.4.2.1 Advanced Oxidation Process.....	17
1.4.2.2 Coagulation.....	18
1.4.2.3 Solvent extraction.....	18
1.4.3. Biological Methods.....	18
1.4.3.1 Biosorption and Bioaccumulation.....	19
1.4.3.2. Microbial degradation.....	20
Chapter- 2: Methods and Instrumentation	21
2.1. The synthesis of the hydrotalcite	21
2.1.1. The coprecipitation method	21

2.1.1.1. Synthesis of Ternary layered Double Hydroxide.....	22
2.1.2. Hydrothermal treatment.....	25
2.1.3. Sol-Gel-Method.....	26
2.1.4. Ion exchange Process.....	27
2.1.5. Urea Hydrolysis.....	27
2.1.6. Oxide Method.....	28
2.1.7. Mechanochemical Method.....	28
2.2. Characterisation.....	29
2.2.1. Powder x-ray diffraction (XRD) method.....	29
2.2.2. Fourier Transformed Infrared (FTIR) Spectroscopy.....	30
2.2.3. Scanning electron microscopy (SEM).....	31
2.2.4. Transmission electron microscopy (TEM).....	31
2.2.5. X-ray photoelectron Spectrometer (XPS).....	32
2.2.6. Brauner-Emmete-Teller (BET) measurement.....	33
2.3. Magnetic Stirrer with a hot plate.....	34
2.4. Centrifuge.....	35
2.5. Vacuum Oven.....	35
2.6. Zetasizer.....	35
2.7. Chemicals.....	36
2.7.1. Magnesium Nitrate [Mg (NO ₃) ₂].....	36
2.7.2. Aluminum Nitrate [Al (NO ₃) ₃].....	36
2.7.3. Nickel Nitrate [Ni (NO ₃) ₂].....	37
2.7.4. Zinc Nitrate [Zn (NO ₃) ₂].....	37
2.7.5. Iron Nitrate [Fe (NO ₃) ₃].....	37
2.7.6. Sodium Carbonate and Sodium Hydroxide [Na ₂ CO ₃ & NaOH].....	37
2.7.7. Methyl Orange.....	37
2.7.8. Congo Red.....	37

2.7.9. Ethanol.....	38
Chapter-3: Synthesis of Ternary Layered Double Hydroxides and their Application for Wastewater Treatment.....	39
3.1. Abstract.....	39
3.2. Result and discussion.....	40
3.2.1. X-ray Diffraction Analysis	40
3.2.2. Crystallinity index (CI):.....	40
3.2.3. Role of reaction time for synthesis of layered double hydroxide	41
3.2.4. Transmission Electron Microscopy (TEM) Analysis	41
3.2.5. Fourier Transform Infrared (FTIR) Spectroscopy Analysis	43
3.3. Kinetic studies.....	44
3.3.1. Effect of solution pH.....	44
3.3.2. Effect of contact time on congo-red adsorption.....	45
3.3.3. Effect of Congo-red concentration	45
3.3.4. Effects of adsorbent dosage	46
3.3.5. Kinetics model	46
3.3.5.1. Pseudo-first-order and pseudo-second-order models	47
3.3.5.2. Intra-particle particle diffusion model	49
3.4. Adsorption capacity and isotherm model	50
3.5. Possible adsorption mechanism	52
3.6. Conclusion	53
Chapter-4: Efficient Removal of Congo Red from Aqueous Solutions Using Calcined and Uncalcined MgZnFe Ternary Layered Double Hydroxide.....	55
4.1. Abstract.....	55
4.2. Results and discussion	55
4.2.1. Characterization	55
4.2.1.1 X-ray diffraction analysis.....	55
4.2.1.2 Fourier Transform Infrared spectrum analysis.....	57

4.2.1.3. N ₂ adsorption-desorption analysis.....	58
4.2.1.4 SEM and TEM analysis.....	60
4.2.1.5 X-ray Photoelectron Spectroscopy (XPS).....	61
4.2.2. Kinetic studies.....	63
4.2.2.1. The pH effects.....	63
4.2.2.2 Effect of time	64
4.2.2.3 Effect of dosage	65
4.2.3. Adsorption isotherm.....	65
4.2.3.1. Langmuir and Freundlich isotherm.....	65
4.2.3.2. Temkin isotherm model	68
4.2.3.3. The Dubinin-Radushkevich isotherm model	69
4.2.3.4. Haseley isotherm model.....	69
4.2.4. Kinetics model of Adsorption isotherm.....	69
4.2.5. Adsorption thermodynamics.....	73
4.2.6. Possible adsorption mechanism	75
4.3. Conclusion	77
Chapter-5: Methyl-orange disintegration by MgZnAl layered double hydroxide (LDH) and its derivatives	79
5.1. Abstract.....	79
5.2. Results and discussion	80
5.2.1. X-ray diffraction of uncalcined and calcined MgZnAl-CO ₃ LDH	80
5.2.2. Fourier Transform Infrared spectrum analysis	81
5.2.3. Nitrogen adsorption-desorption isotherm	82
5.2.4 Morphological analysis.....	83
5.3. Kinetic studies.....	84
5.3.1. The effect of solution pH	84
5.3.2. Effect of contact time on Methyl-orange adsorption	85
5.3.3. Effect of methyl-orange (MO) concentration	86

5.3.4. Effect of adsorbent dosage.....	86
5.4. Kinetic model applied to the adsorption of Methyl-orange onto the uncalcined and calcined layered double hydroxide	88
5.5. Adsorption thermodynamic	91
5.6. Adsorption isotherm	92
5.7. Economical analysis	95
5.8. Adsorption Mechanism.....	97
5.9. Conclusion	99
Chapter-6 : Congo red disintegrating MgNiAl Layered double hydroxide (LDH) and its derivative having high recyclability.....	101
6.1. Abstract.....	101
6.2. Results and discussion	101
6.2.1. Characterisation	101
6.2.1.1. X-ray diffraction of MgNiAl-CO ₃ LDH and calcined MgNiAl-CO ₃ LDH.....	101
6.2.1.2. Fourier Transform Infrared (FTIR) Spectrum	101
6.2.1.3. Nitrogen adsorption-desorption isotherm	101
6.2.1.4. Morphology, and element composition	101
6.2.2. Kinetic Studies.....	105
6.2.2.1. The effect of solution pH	105
6.2.2.2. Effect of contact time on Congo-red removal	105
6.2.2.3. Effect of congo-red (CR) Concentration	105
6.2.2.4. Effect of adsorbent dosage.....	105
6.2.3. Kinetics model of Congo-red adsorption onto the uncalcined and calcined layered double hydroxide	105
6.2.4. Equilibrium Adsorption Isotherms	112
6.2.5. Recycle Test	114
6.2.5.1 Effect of crystallite size of regeneration materials	114
6.2.5.2 Fourier transform infrared spectroscopy analysis.....	114

6.2.5.3 X-ray photoelectron spectroscopy analysis	114
6.2.5.4 Scanning Electron Microscopy analysis of regeneration materials	114
6.2.6. Economic Analysis	123
6.2.7. Adsorption Mechanism.....	125
6.2.8. Conclusion	128
Chapter 7: Conclusions and Future Work	129
7.1. Conclusion of the present investigation.....	129
7.2. Future work.....	131
