<b>ABSTRACT</b>	<b>XVII</b>

1. Introduction	<b>1</b>
1.1 Brain-Computer Interface (BCI).....	1
1.2 Electroencephalography in BCI.....	3
1.3 Types of BCI Systems.....	4
1.3.1 Invasive BCI Systems.....	4
1.3.2 Semi-invasive BCI Systems.....	4
1.3.3 Non-invasive BCI Systems.....	5
1.4 Major Issues in BCI Design.....	5
1.4.1 Issues Related to EEG Modality in BCI Design.....	6
1.4.2 Channel Redundancy.....	7
1.4.3 Issues with Performance Evaluation Metrics.....	7
1.4.4 Curse of Dimensionality.....	7
1.5 Scope of Combinatorial Optimization in BCI.....	8
1.6 Thesis Objectives.....	9
1.6.1 Mapping EEG Signals to Motor Activities.....	9
1.6.1.1 Collecting Signals Related to Motor Imagery and Signal Preprocessing.....	9
1.6.1.2 Feature Engineering.....	10

1.6.1.3	MI-Tasks Classification Using Machine Learning Methods.....	10
1.6.2	Optimal Channel Selection in Brain-Computer Interface Development.....	10
1.6.3	Finding the Role of Cognitive Regions in Motor-Imagery Activities.....	11
1.6.4	Maximizing the Performance of the BCI Systems.....	11
1.6.5	Dealing with High-Dimensional Data Using Feature Selection.....	12
1.7	Performance Measures Used in the Study.....	13
1.7.1	Average Classification Accuracy.....	13
1.7.2	Channel/Feature Reduction Rate.....	14
1.7.3	Confusion Matrix.....	14
1.7.4	Precision.....	15
1.7.5	Recall.....	15
1.7.6	F1-Score.....	15
1.8	Approaches and Contributions of the Thesis.....	15
1.8.1	A Multiclass EEG Signal Classification Model Using Spatial Feature Extraction and eXtream Gradient Boosting Algorithm.....	15
1.8.2	Filter-based Channel Selection Approach Using Dynamic Channel Relevance.....	16
1.8.3	Wrapper-based Channel Selection for Multiclass BCI Classification Using Multi-objective Improved Firefly Algorithm.....	17
1.8.4	Improvement in Wrapper-based Channel Selection Technique Using Multi-objective X-shaped Binary Butterfly Optimization Algorithm.....	17
1.8.5	A Hybrid Feature Selection Approach Based on Information Theory and Dynamic Butterfly Optimization Algorithm for Data Classification.....	18
1.9	Thesis Organization.....	19

2.	Preliminaries and Related Work: Literature Review	<b>20</b>
2.1	Introduction.....	20
2.2	Combinatorial Optimization for Search Space Reduction.....	20
2.2.1	Filter-based Search Space Optimization Methods.....	22
2.2.2	Wrapper-based Search Space Optimization Methods.....	22
2.2.3	Hybrid Search Space Optimization Methods.....	23
2.3	Dataset Details.....	32
2.3.1	Datasets Used in Channel Selection Problem.....	32
2.3.1.1	Dataset 1 (BCI Competition IV-2008-II A).....	32
2.3.1.2	Dataset 2 (BCI Competition IV).....	33
2.3.1.3	Dataset 3 (BCI Competition III- Dataset IVa)...	33
2.3.2	Datasets Used in Feature Selection Problem.....	34
3	A Multiclass EEG Signal Classification Model Using Spatial Features and eXtream Gradient Boosting Algorithm	<b>36</b>
3.1	Introduction.....	36
3.2	Limitations of the Existing Literature.....	38
3.3	Our Contribution.....	38
3.4	Proposed Methodology.....	39
3.4.1	Signal Preprocessing.....	39
3.4.2	Feature Extraction.....	43
3.4.3	Classification.....	44
3.5	Performance Comparison with Baseline Models.....	46
3.6	Limitations of the Study.....	47
3.7	Conclusion & Future Scope.....	49
4	Dynamic Channel Relevance: A Filter-based Channel Selection Method	<b>50</b>
4.1	Introduction.....	50
4.2	Limitations of the Existing Literature.....	52
4.3	Our Contribution.....	52
4.4	Redundancy and Relevancy in Channel Selection Problem.....	53

4.4.1	Information-Theoretic Background.....	53
4.4.2	Channel Redundancy Measurement.....	54
4.4.3	Channel Relevancy Measurement.....	55
4.5	Proposed Methodology: Dynamic Channel Relevance.....	57
4.6	Feature Extraction Using Multivariate Empirical Mode Decomposition.....	59
4.7	Feature Selection.....	60
4.8	Experimental Results.....	61
4.8.1	Test Results on Dataset 1.....	61
4.8.1.1	Results Comparison with Baseline Methods.....	64
4.8.2	Test Results on Datasets 2 and 3.....	70
4.8.2.1	Results Comparison with Baseline Methods.....	70
4.8.3	Discussion.....	76
4.8.3.1	Distribution of the Selected Channels.....	76
4.8.3.2	Time Complexity Analysis.....	76
4.8.3.3	Results Implications.....	79
4.9	Limitations of the Study.....	79
4.10	Conclusion & Future Scope.....	80
<b>5</b>	<b>Wrapper-based Channel Selection for Multiclass BCI Classification Using Multi-objective Improved Firefly Algorithm</b>	<b>81</b>
5.1	Introduction.....	81
5.2	Limitations of the Existing Literature.....	83
5.3	Our Contribution.....	84
5.4	Firefly Algorithm: Mathematical Background.....	84
5.5	Proposed Methodology.....	85
5.5.1	Signal Preprocessing.....	85
5.5.1.1	Noise Filtering.....	85
5.5.1.2	Rhythm Isolation.....	86
5.5.2	Channel Selection.....	86
5.5.3	Channel Role Evaluation Using Fisher Information Criterion.....	88

5.6	Feature Extraction using Regularized Common Spatial Patterns with Aggregation.....	89
5.7	Results & Discussion.....	91
5.7.1	Test Results on Dataset 1.....	92
5.7.2	Test Results for Dataset 2 & Dataset 3.....	97
5.7.3	Comparison of Channel Reduction Rate.....	101
5.7.4	Time Complexity Analysis.....	103
5.7.5	Results Implications.....	103
5.8	Limitations of the Study.....	105
5.9	Conclusion & Future Scope.....	106
<b>6</b>	<b>Multi-objective X-shaped Binary Butterfly Optimization Algorithm: An Improved Wrapper-based Channel Selection Approach</b>	<b>108</b>
6.1	Introduction.....	108
6.2	Limitations of the Existing Literature.....	109
6.3	Our Contribution.....	109
6.4	Butterfly Optimization Algorithm: An Introduction.....	110
6.5	Proposed Methodology.....	111
6.5.1	Channel Setting.....	111
6.5.2	Signal Filtering.....	111
6.5.3	Artifacts Reduction.....	111
6.5.4	Candidate Channel Selection.....	112
6.5.5	X-shaped Binary Butterfly Optimization Algorithm.....	112
6.5.6	Fitness Function.....	114
6.6	Feature Engineering.....	115
6.7	Experimental Results.....	115
6.7.1	Parameter Tuning.....	115
6.7.2	Average Size of the Optimal Channel Set.....	116
6.7.3	Results Comparison with Baseline Methods.....	118
6.7.3.1	Test Results on Dataset 1.....	119
6.7.3.2	Test Results on Dataset 2.....	121
6.7.3.3	Test Results on Dataset 3.....	122
6.8	Discussion.....	125

6.8.1	Topographical Distribution of Selected Channels.....	125
6.9	Limitations of the Study.....	126
6.10	Conclusions & Future Scope.....	130
<b>7</b>	<b>A Hybrid Feature Selection Approach based on Information Theory and Dynamic Butterfly Optimization Algorithm for Data Classification</b>	<b>131</b>
7.1	Introduction.....	131
7.2	Limitations of the Existing Literature.....	132
7.3	Our Contribution.....	132
7.4	Preliminaries.....	133
7.4.1	Dynamic Butterfly Optimization Algorithm .....	133
7.4.2	Feature Interaction Maximization.....	134
7.5	Proposed Methodology.....	137
7.5.1	Dynamic Butterfly Optimization-based Interaction Maximization Algorithm.....	138
7.5.2	Complexity Analysis of IFS-DBOIM.....	139
7.6	Experimental Results & Discussion.....	140
7.6.1	Experimental Setup.....	140
7.6.2	Results Analysis.....	141
7.6.2.1	Performance Comparison in the First Group Experiment.....	142
7.6.2.2	Performance Comparison in the Second Group Experiment.....	145
7.6.2.3	Sensitivity and Specificity Comparison.....	149
7.6.2.4	Time Complexity Analysis.....	155
7.6.2.5	Wilcoxon's test Results Analysis.....	157
7.6.2.6	Convergence Analysis.....	160
7.6.2.7	Implications of the Study.....	163
7.7	Limitations of the Study.....	164
7.8	Conclusions & Future Scope.....	164
<b>8</b>	<b>Concluding Remarks and Future Directions</b>	<b>166</b>
8.1	Contribution Summary.....	166

8.2	Scope For Future Work.....	168
8.2.1	Graph-based Similarity Search Techniques for Channel... Selection .....	168
8.2.2	Enhancing Causal Inference for Channel Selection.....	168
8.2.3	Multi-view Deep Learning with Channel Aware Attention Scheme.....	169
8.2.4	Feature Selection using Graph Mining.....	169
8.2.5	Enhancing the Scope of Proposed Optimization Methods.....	170
A	Publications.....	171
