

# List of Tables

2.1	Name, chemical formula and manufacturer name of reagents used. . . . .	30
3.1	Characteristics of Cu NPs in sol as well as in powder form. . . . .	75
4.1	Characteristics of the phases present, corresponding lattice parameters and the coherently scattered domain size of the rice-starch stabilized Ag-Cu alloy NPs. . . . .	82
4.2	Summary of the Ag-Cu alloy NPs characteristics. . . . .	92
4.3	LSPR maxima, FWHM, Zeta potential and particle size of the samples characterized in colloidal state. . . . .	96
4.4	Orthorhombic space groups, their general and special Wyckoff positions and corresponding reflection conditions. The actual and transformed coordinates of orthorhombic AuCu (Space group Pbam; Space group no. 55) is given in columns IV and V. . . . .	110
7.1	Elemental composition of Au and Cu in atom % in AuCu nanoparticles processed at 180 °C for 1 h and 290 °C for 2 h acquired from TEM/STEM-EDS analyses. . . . .	164
