List of Figures	xi
List of Tables	xviii
List of Symbols	xx
Abbreviations	xxii
Preface	xxiv
Chapter 1: Introduction and Literature survey	1
1.1 Introduction	2
1.2 Equal-channel angular pressing	3
1.2.1 The strain imposed in ECAP	4
1.2.2 The fundamental processing routes in ECAP	5
1.2.3 Strain development in different processing routes	6
1.2.4 Microstructure and mechanical properties of ECAPed material	7
1.3 Electropulsing	11
1.3.1 Electroplasticity	12
1.3.2 Accelerated recrystallization	14
1.3.3 Nanocrystallization	15
1.3.4 Theories on Electropulsing	17
1.4 Transformations in steel	18

1.5 Bainitic transformation	19
1.5.1 Theories related to bainitic transformation.....	19
1.5.2 Cementite precipitation in bainite.....	21
1.5.3 Carbide-free bainite	22
1.5.4 Nanostructured bainitic steel	24
1.5.5 Orientation relationship and variant pairing.....	25
1.5.6 Stability of the retained austenite	28
1.5.7 Tensile properties of nanostructured bainite	31
1.5.8 Work hardening behaviour	33
1.5.9 The incomplete-reaction phenomenon (T_0 and T_0' Concept).....	34
1.5.10 Acceleration of bainitic Transformation.....	36
1.6 Acceleration of phase transformation by electropulsing	37
1.6.1 Thermodynamic effects	37
1.6.2 Kinetic effects.....	39
1.7 Motivation	40
1.8 Objectives of the present investigation	41
Chapter 2: Materials and methods	42
2.1 Introduction	43
2.2 Effect of alloying elements	43
2.3 Materials selection and design	45
2.4 ECAP of D1 sample	47

2.5 Making of alloy D2	48
2.6 Heat treatment	49
2.7 Electropulsing	50
2.8 Microstructural characterization	52
2.8.1 Optical and scanning electron microscopy	52
2.8.2 X-ray diffraction	52
2.8.3 Transmission electron microscopy	55
2.8.4 Electron back scattered diffraction	56
2.9 Mechanical properties	56
Chapter 3: Structure and mechanical properties of UFG low carbon steel processed by ECAP followed by electropulsing	59
3.1 Introduction	60
3.2 Results	60
3.2.1 ECAP of D1 sample	60
3.2.2 Electropulsing of ECAP-6 sample.....	61
3.3 Discussion	72
3.3.1 Contribution of Joule heating towards grain modification	73
3.3.2 Athermal effect of electropulsing	74
3.3.3 Effect of skin depth.....	76
3.3.4 Grain modification mechanism	77
3.3.5 Mechanical properties.....	77
3.4 Conclusions	79

Chapter 4: Microstructure of bulk nanostructured steel	80
4.1 Introduction	81
4.2 Results	81
4.3 Discussion	94
4.3.1 Effect of alloy content and austempering time on the volume fraction of bainite ..	94
4.3.2 Effect of austempering time on microstructure	97
4.3.3 Effect of dislocation density on plate and sheaf thickness of bainite	99
4.3.4 Effect of austempering time on crystallographic variant selection	102
4.4 Conclusions	104
Chapter 5: Strengthening and hardening behaviour of nanostructured bainitic steel	106
5.1 Introduction	107
5.2. Results	107
5.3. Discussion	114
5.3.1 Distribution of carbon and dislocations in RA	114
5.3.2 Major factors contributing yield strength	115
5.3.3 Effect of carbon distribution in RA on work hardening behaviour	116
5.3.4 Work hardening mechanism	118
5.4 Conclusions	120
Chapter 6: Effect of electropulsing on stability of retained austenite and nanostructured bainite	121
6.1. Introduction	122
6.2. Results	122

6.3. Discussion	136
6.3.1 Thermal effect of electropulsing.....	137
6.3.2 Athermal effect of electropulsing.....	140
6.3.3 Carbide precipitation and dissolution.....	140
6.3.4 Electropulsing assisted bainite and martensite formation.....	142
6.4. Conclusions	145
Chapter 7: Effect of electropulsing on martensite	146
7.1 Introduction	147
7.2 Results	147
7.3 Discussion	158
7.3.1 Stability of martensite.....	158
7.3.2 Transformations in retained austenite.....	160
7.3.3 Changes in hardness after electropulsing.....	161
7.4 Conclusions	162
Chapter 8: Summary and Suggestions for Future Work	163
8.1 Conclusions of the present work	164
8.2 Suggestions for future work	165
References	167
