

Contents

1	Introduction and Motivation	1
1.1	Automatic Identification and Data Capturing	1
1.2	RFID Applications	4
1.2.1	Amarnath Yatra Pilgrimage Tracking	5
1.2.2	Passport Biometrics	5
1.2.3	Access Control	5
1.2.4	Marathons	5
1.2.5	Museums and Libraries	6
1.2.6	Luggage Tracking at Airports	6
1.2.7	Hospitals	6
1.2.8	Transportation	6
1.2.9	Animal Identification	7
1.3	Challenges	7
1.3.1	Size Constraints	7
1.3.2	Frequency Matching	8
1.3.3	Manufacturing Tolerances	8
1.3.4	Read-Range Optimization	8
1.3.5	Cost Effectiveness	8
1.4	Motivation	9
1.4.1	UHF Band Wavelength Range	9
1.4.2	Use of Impedance Matching Techniques	10

1.4.3	Enhancing the Detection Range	10
1.4.4	Weak Backscatter Signal and Vulnerability to Metallic Objects . . .	10
1.5	Thesis Organization	10
1.5.1	Chapter 1: Introduction and Motivation	11
1.5.2	Chapter 2: Exploration of UHF RFID Antenna	12
1.5.3	Chapter 3: Matching Techniques - Nested Slot and T-Match Network	12
1.5.4	Chapter 4: Inductively Coupled Loop and Meandering for Size Contraction	12
1.5.5	Chapter 5: Combined Matching Techniques with Maximum Read Range Achievement	12
1.5.6	Chapter 6: L-Shaped Load Bars, Sectorial Patches, and Circular Polarization	13
1.5.7	Chapter 7: Summary, Conclusions, and Future Scope	13
2	Analysis of RFID Tag Antennas	14
2.1	Introduction	14
2.2	RFID System Components	15
2.2.1	RFID Reader	15
2.2.2	RFID Tag	17
2.3	Operating Frequency Bands and Principle	18
2.4	Passive RFID Tags for UHF band	20
2.4.1	UHF RFID-ASIC	21
2.4.2	Passive UHF Tag Antenna Features	22
2.5	Passive UHF Tag Performance	24
2.5.1	Impedance Measurement	24
2.5.2	Detection Range	28
2.6	Literature Review	28
2.6.1	Review of Passive UHF RFID meandered tag antennas	29
2.6.2	Review of Circularly Polarized UHF RFID tag antennas for Metal- lic surfaces	34

3	A Nested Slot and T-Match Network Based Hybrid Antenna for UHF RFID Tag Applications	40
3.1	Introduction	40
3.2	UHF Tag Design	42
3.3	Parametric Analysis	46
3.4	Results and Discussions	49
3.5	Outcome	52
4	A Meandered Inductive Loop based RFID Tag Antenna For Luggage Tracking	54
4.1	Introduction	54
4.2	Proposed UHF Tag	56
4.3	Evolution Steps	61
4.4	Parametric Analysis	63
4.5	Results and Discussion	65
4.6	Outcome	68
5	A Combined Matching Approaches Based UHF RFID Planar Tag Antenna	69
5.1	Introduction	69
5.2	Planar Tag Design	71
5.3	Evolution steps	74
5.4	Parametric Study	74
5.5	Discussion of The Results	78
5.5.1	Impedance and Return loss	78
5.5.2	Radiation Efficiency and Realized Gain	80
5.5.3	Read range	80
5.5.4	Radiation Pattern	81
5.6	Outcome	82
6	Optimized Circular RFID Tag Antenna Achieving Extended Detection Range on Metallic Surfaces	84

6.1	Introduction	84
6.2	Circular antenna design	86
6.3	Evolution steps of Circular CP loop tag antenna	91
6.4	Parametric Analysis	92
6.4.1	Effect of vias	92
6.4.2	Effect of gap between L-shaped patches	93
6.4.3	Effect of gap between V-shaped slots	95
6.4.4	Effect of shorting pin position on Axial ratio	95
6.5	Results and Analysis	96
6.6	Outcome	100
7	Conclusion and Future Scope	101
7.1	Conclusion	101
7.2	Future Scope	104
