LIST OF TABLES	xiii
LIST OF FIGURES	xvi
ABBREVIATIONS and SYMBOLS	xxiv
ABSTRACT	xxvi
CHAPTER 1 : INTRODUCTION	1
1.1 General	1
1.2 Foam Concrete	3
1.3 Historical Background of Foam Concrete	4
1.4 Applications of Foam Concrete	5
1.5 Objective of the study	7
1.6 Scope of the study	8
1.7 Scientific Novelty of study	11
1.8 Organization of the thesis	11
CHAPTER 2 : LITERATURE REVIEW	13
2.1 General	13
2.2 Material Components and Preparation	14
2.3 Proportioning and Preparation of FC mixes	16
2.4 Properties of foam concrete	18
2.4.1 Fresh state characteristics	18
2.4.1.1 Consistency	18
2.4.1.2 Stability	19
2.4.1.3 Workability	20
2.4.2 Hardened properties	21
2.4.2.1 Drying shrinkage	21
2.4.2.2 Density	22
2.4.2.3 Air-void system	22
2.4.2.4 Compressive strength	23
2.4.2.5 Flexural and split tensile strengths	24

2.4.2.6	Modulus of elasticity	26
2.4.3	Durability properties	27
2.4.3.1	Water absorption and permeability	27
2.4.3.2	Sorptivity and porosity	28
2.4.3.3	Resistance to aggressive environment	30
2.4.3.3.1	Resistance to chloride environment	30
2.4.3.3.2	Resistance to sulphate environment	31
2.5	Literature review on recycled waste admixed in FC mixes	32
2.5.1	Fly ash and bottom ash as OPC and natural river sand replacement	32
2.5.2	Slag as OPC and natural river and replacement	34
2.5.3	Silica fume as OPC	36
2.5.4	Palm oil fuel ash	37
2.5.5	Rice husk ash	39
2.5.6	Ceramic waste tile powder as OPC	40
2.5.7	Quarry dust waste	41
2.5.8	Recycled waste aggregates as natural river sand replacement from C&D plant	42
2.6	Summary	45
2.7	Need of the study	46
CHAPTER 3 : MATERIALS AND CHARACTERIZATION		49
3.1	Introduction	49
	Material procurement, aggregate properties and Control Mix Design	52
3.2	Materials Testing	55
3.2.1	Natural river sand and CD-RFA	55
3.2.2	Cementitious and supplementary sementitious materials	55
3.2.3	Potable water	55
3.2.4	Natural protein based foaming agent	56
3.3	Testing of foam concrete mixtures	56
3.3.1	Fresh state characteristics	56
3.3.2	Mechanical characteristics	56
3.3.3	Durability characteristics	57
3.3.3.1	Abrasion resistance	57
3.3.3.2	Density, porosity and volume of permeable voids	58
3.3.3.3	Chloride and sulphate attack	59
3.3.4	Microstructural investigation	61

3.3.4.1	Scanning electron microscope	61
3.3.4.2	X-Ray diffractometer	61
3.3.5	Formulation of mix design	62
3.3.6	Mix design	63
3.4	Selection of natural river sand and CD-RFA aggregates	63
3.5	Particle size distribution of natural river sand and CD-RFA aggregates	66
3.6	Aggregate properties	67
3.7	Cementitious materials	67
3.7.1	Characterization of ceramic waste tiles powder	69
3.8	Foaming agent	72
CHAPTER 4 : PRELIMINARY CHARACTERISTICS OF FOAM CONCRETE MIXES		73
4.1	Introduction	73
4.2	Experimental setup	74
4.3	Results and Discussion	75
4.3.1	Study on flowability of FC mixes admixed with CD-RFA and CWTP	75
4.3.1.1	Study of admixing CD-RFA on the flowability of FC mixtures	75
4.3.1.2	Effect of admixing ceramic waste tile powder (CWTP) on flowability of FC mixes	77
4.3.1.3	Study on foaming agent dosage in FC mixes admixed with CD-RFA and CWTP	79
4.3.1.4	Relation between flowability and foaming agent Dosage	82
4.3.1.5	Relationship between fresh density and foaming dosage of FC mixes	85
4.3.2	Hardened density of FC mixes admixed with CD-RFA and CWTP	89
4.3.2.1	Effect of CD-RFA on density of FC mixes	89
4.3.2.2	Effect of CWTP on density of FC mixes	92
4.3.3	Relation between fresh, dry and Bulk density of FC mixes admixed with CD-RFA and CWTP at different dilution ratio	95
4.3.3.1	Relation between fresh density and dry density	95
4.3.3.2	Relation between fresh density and bulk density	99
4.3.3.3	Relation between bulk and dry density of FC mixes	102
4.4	Summary	104
CHAPTER 5 : EFFECT OF OPTIMIZING FOAMING AGENT CONCENTRATION AND CD-RFA CONTENT ON FOAM CONCRETE MIXES		106
5.1	General	106

5.2	Materials and Methodology for mix design of foam concrete admixed with CD-RFA	106
5.3	Results and Discussion	109
5.3.1	Effect of dilution ratio and CD-RFA on density of FC mixes	109
5.3.2	Effect of dilution ratio and CD-RFA on Volume of permeable voids and porosity	112
5.3.3	Effect of dilution ratio and CD-RFA on Water absorption of FC mixes	120
5.3.4	Sorptivity	122
5.3.5	Compressive strength	128
5.3.6	Split tensile and flexural strength	131
5.3.7	Abrasion Resistance	134
5.3.8	Change in mass when exposed to acidic environment	135
5.3.9	Change in strength after exposure to chloride and Sulphate solution	137
5.3.10	Microstructure properties of foam concrete	139
5.3.10.1	X-ray diffraction (XRD)	139
5.3.10.2	Scanning electron microscopy & energy dispersive X-ray spectroscopy	142
5.4	Two-way Anova	147
5.5	Summary and Recommendations	149
5.5.1	Summary	149
5.5.2	Recommendations	151
5.5.3	Novel Contributions	152
CHAPTER 6 : EFFECT OF CERAMIC WASTE TILE POWDER ON MECHANICAL MICROSTRUCTURAL AND DURABLE CHARACTERISTICS OF FOAM CONCRETE MIXES		153
6.1	General	153
6.2	Designing, proportioning, and preparing mixtures for foam concrete	153
6.3	Stage I: Characterization of materials used in study	154
6.3.1	Stage II: foam concrete incorporating CWTP	154
6.4	Results and Discussion	155
6.4.1	Effect of ceramic waste tile powder (CWTP) on density	155
6.4.2	Effect of ceramic waste tile powder (CWTP) on water absorption	156
6.4.3	Effect of ceramic waste tile powder (CWTP) on porosity and volume of permeable voids	159
6.4.4	Effect ceramic waste tile powder (CWTP) on sorptivity	161
6.4.5	Effect of ceramic waste tile powder (CWTP) on compressive characteristics	164

6.4.6	Effect of ceramic waste tile powder on split tensile strength and flexural strength	165
6.4.7	Effect of ceramic waste tile powder (CWTP) on abrasion resistance	168
6.4.8	Effect of ceramic waste tile powder (CWTP) on change in mass of foam concrete mixes exposure to aggressive environment	170
6.4.9	Effect of ceramic waste tie powder (CWTP) on change in compressive strength of foam concrete mixes exposure to aggressive environment	173
6.4.10	Effect of ceramic waste tile powder (CWTP) on microstructural properties (Formation of hydrated products)	176
6.4.11	Effect of ceramic waste tile powder (CWTP) on X-ray diffraction (XRD)	177
6.4.12	Effect of ceramic waste tile powder (CWTP) on pore diameter and SEM analysis	178
6.4.13	Effect of ceramic waste tile powder (CWTP) on durability index	183
6.4.14	Categorising foam concrete mixes using DI	184
6.5	Summary	188
CHAPTER 7 : CONCLUSIONS AND SCOPE FOR FUTURE WORK		190
7.1	CONCLUSIONS	190
7.1.1	CD-RFA and CWTP as admixtures in FC mixes	190
7.1.2	Optimization of dilution ratio of FC mixes admixed with CD-RFA	190
7.1.3	Fresh properties and hardened density of FC mixes admixed with CD-RFA and CWTP	191
7.1.4	Mechanical characteristics of FC mixes	192
7.1.5	Water ingress properties of FC mixes	192
7.1.6	Air-voids in CWTP admixed FC mixes	193
7.1.7	Microstructural and crystallography of FC mixes	193
7.1.8	Durability characteristics of foam concrete mixes admixed with CD-RFA and CWTP	194
7.2	SCOPE FOR FUTURE WORK	196
