List of Tables	xix
List of Symbols	xxi
List of Abbreviations	xxiii
Preface	xxv
1 Introduction	1
1.1 Research objectives	4
1.2 Motivation of the research work	6
1.3 Contributions and organization of the thesis	7
2 Preliminaries and related work	11
2.1 Preliminaries	11
2.1.1 LoRaWAN overview	11
2.1.2 Knowledge distillation	12
2.1.3 Federated learning overview	13
2.2 Related work on federated learning with imperfect labels	13
2.3 Related work on interference problem in LoRaWAN	17
2.4 Related work on UAV-enabled aerial networks	18
2.5 Conclusion	20
3 A Federated Learning Approach with Imperfect Labels in LoRa-based Transportation Systems	23
3.1 Introduction	23
3.2 Background and preliminaries	26
3.2.1 Preliminaries	26

3.2.2	Overview of Fed-LoRa approach	27
3.3	Fed-LoRa: <u>F</u> ederated learning approach with imperfect labels using <u>L</u> oRa	28
3.3.1	Estimation of centroid vector	29
3.3.2	Selection of inferior participants	29
3.3.3	Data reduction and inclusion mechanisms	30
3.3.4	Optimal fraction of server dataset	33
3.3.5	Local model and global model updates	33
3.4	Scalability for larger network configurations.	38
3.5	Adaptability to other communication protocols and network configurations	38
3.6	Performance evaluation	40
3.6.1	Experimental setup	40
3.6.2	Evaluation results	41
3.7	Conclusions and future work	45
4	Machine Learning-Based Interference Mitigation in Long-Range Networks	47
4.1	Introduction	47
4.1.1	Major contributions	50
4.1.2	Background and motivation	51
4.2	Preliminaries and problem statement	54
4.2.1	Preliminaries	54
4.2.2	Overview of network model	57
4.2.3	Interference computation	57
4.2.4	Problem statement	58
4.3	LoRa devices interference system	58
4.3.1	Design of LNs and LG	59
4.3.2	Dataset creation for the training of the system	59
4.3.3	Data collection for testing of the system	61
4.3.4	Data filtering using joint Kalman filter	62
4.3.5	Generating data stream event using sliding windows	65
4.3.6	Identify the interference devices	66
4.4	Experimental results	70
4.4.1	Impact of number of samples on SNR values with varying distance among LNs and SF	71
4.4.2	Impact of number of LNs on SNR	71
4.4.3	Impact of different parameters on performance	73
4.4.4	Impact of number of gateways	74

4.4.5	Analyzing the impact of multi-class classification ML models . .	75
4.4.6	Impact of increasing LN on ML models performance	75
4.4.7	Energy efficiency and Cost-effectiveness	76
4.5	Conclusion and future work	77
5	Leveraging Augmented Intelligence of Things to Enhance Lifetime of UAV-Enabled Aerial Networks	81
5.1	Introduction	81
5.1.1	Motivation and contribution	83
5.2	Background	84
5.2.1	UAVs based data collection and processing	84
5.2.2	DNN compression and knowledge distillation	84
5.2.3	Preliminary	85
5.3	EU-AIoT: Enhancing the lifetime of UAV-enabled aerial network using AIoT	86
5.3.1	(α, β, γ) -DNN transformation	86
5.3.2	Clever training of lightweight DNN	88
5.4	Prototype setup and performance evaluation	93
5.4.1	Experimental setup	94
5.4.2	Experimental results	95
5.5	Conclusion and future work	99
6	Conclusion and future work	101
	References	105
	List of publications	119
