List of Figures	xv
List of Tables	xvii
Abbreviations	xix
Symbols	xxi
Preface	xxiii
1 Introduction	1
1.1 Background	2
1.1.1 Fractional calculus	2
1.1.2 Fractional partial differential equation	2
1.1.2.1 Fractional advection-diffusion equation	3
1.1.2.2 Fractional telegraph equation	4
1.1.2.3 Fractional Burgers equation	5
1.2 Definitions of Fractional Derivatives	5
1.2.1 Basic definitions	6
1.2.2 Atangana-Baleanu derivative	7
1.2.3 Generalized fractional derivative	8
1.3 Literature Review	9
1.3.1 Literature review on fractional partial differential equations . .	10
1.3.1.1 Literature review on fractional advection-diffusion equation	11
1.3.1.2 Literature review on fractional Burgers equation . . .	12
1.3.1.3 Literature review on fractional telegraph equation . .	13
1.4 Challenges and Motivation	14
1.5 Problem Statement and Thesis Objective	16
1.6 Outline of the Thesis	17

2	Numerical Approximations of Atangana-Baleanu Caputo Derivative and Its Application	19
2.1	Introduction	19
2.2	Numerical Approximation to ABC Derivative	20
2.2.1	Method 1: Discretization using FDM	21
2.2.2	Method 2: Discretization using Taylor expansion	22
2.3	Application: Solution of Fractional Advection-Diffusion Equation . .	25
2.4	Numerical Examples	29
2.5	Conclusion	40
3	Numerical Approximation of Fractional Burgers Equation with Atangana-Baleanu Caputo Derivative	41
3.1	Introduction	42
3.2	Formation of Numerical Scheme	43
3.2.1	Stability analysis of numerical scheme	47
3.3	Numerical Examples	50
3.4	Conclusion	60
4	High-Order Approximation for Generalized Fractional Derivative and Its Application	61
4.1	Introduction	62
4.2	Main Result	63
4.2.1	Formation of numerical scheme	64
4.2.2	Stability of the numerical scheme	72
4.3	Numerical Examples	74
4.3.1	Effect of scale and weight functions on the solution	81
4.4	Conclusion	84
5	Finite Difference Scheme for a Generalized Fractional Time-Derivatives Telegraph Equation	87
5.1	Introduction	88
5.2	Finite Difference Scheme	89
5.3	Stability and Convergence Analysis	92
5.4	Numerical Examples	95
5.4.1	Influence of scale function on the solution of GTFTE	99
5.4.2	Influence of weight function on the solution of GTFTE	101
5.5	Conclusion	106
6	Conclusion and Future Work	107
6.1	Conclusion	107
6.2	Future Work	109

<i>Contents</i>	xiii
Bibliography	111
List of Publications	139

List of Figures

2.1	Comparison of the numerical solution obtained by Method 1 to the analytical solution of Example 2.4.2.	32
2.2	Comparison of the numerical solution obtained by Method 1 to the analytical solution of Example 2.4.3.	32
3.1	A comparison between the solution obtained numerically by the scheme to the exact solution of Example 3.3.1.	50
3.2	Numerical solution of Example 3.3.2 with fixed time $t = 1$	51
3.3	Numerical solution of Example 3.3.2 with fixed time $t = 5$	52
3.4	Numerical solution of Example 3.3.3 with fixed time $t = 1$	53
3.5	Numerical solution of Example 3.3.3 with fixed time $t = 5$	53
4.1	Comparison of the exact and the numerical solutions of Example 4.3.2.	78
4.2	Comparison of the exact and the numerical solutions of Example 4.3.3.	80
4.3	The numerical solutions of Example 4.3.4 with different advection coefficient $a(x, t)$	82
4.4	The numerical solutions of Example 4.3.5 with different values of α	83
4.5	The numerical solutions of Example 4.3.5 with different weight functions.	84
4.6	The numerical solutions of Example 4.3.5 with different scale functions.	85
5.1	The analytical solution of Example 5.4.1.	96
5.2	The numerical solutions of Example 5.4.1 for different parameters.	97
5.3	The analytical solution of Example 5.4.2.	100
5.4	The numerical solutions of Example 5.4.2 for different parameters.	101
5.5	The numerical solutions of Example 5.4.1 for different parameters and scale functions.	103
5.6	The numerical solutions of Example 5.4.1 for different parameters and weight functions.	105

List of Tables

2.1	MAE and CO of Example 2.4.1 with different values of $\tau = \frac{1}{n}$ by Method 1.	30
2.2	MAE and CO of Example 2.4.1 with different values of $\tau = \frac{1}{n}$ by Method 2.	31
2.3	MAE and CO of Example 2.4.2 with different values of $\tau = \frac{1}{n}$, and fixed $h = \frac{1}{1000}$ by Method 1.	33
2.4	MAE and CO of Example 2.4.2 with different values of $\tau = \frac{1}{n}$, and $h = \frac{1}{m}$ by Method 1.	34
2.5	MAE and CO of Example 2.4.2 with different values of $\tau = \frac{1}{n}$, and fixed $h = \frac{1}{1000}$ by Method 2.	35
2.6	MAE and CO of Example 2.4.3 with different values of $\tau = \frac{1}{n}$, and fixed $h = \frac{1}{1000}$ by Method 1.	36
2.7	MAE and CO of Example 2.4.3 with different values of $h = \frac{1}{m}$, and fixed $\tau = \frac{1}{500}$ by Method 1.	37
2.8	MAE and CO of Example 2.4.3 with different values of $\tau = \frac{1}{n}$, and fixed $h = \frac{1}{1000}$ by Method 2.	38
2.9	MAE and CO of Example 2.4.3 with different values of $h = \frac{1}{m}$, and fixed $\tau = \frac{1}{500}$ by Method 2.	39
3.1	MAE and CO of Example 3.3.1 in spatial direction with $M = 2^{12}$. . .	54
3.2	MAE and CO of Example 3.3.1 in temporal direction with $N = 2^9$. .	55
3.3	MAE and CO of Example 3.3.2 in temporal direction with $N = 2^9$. .	56
3.4	MAE and CO of Example 3.3.2 in spatial direction with $M = 2^7$. . .	57
3.5	MAE and CO of Example 3.3.3 in temporal direction with $N = 2^9$. .	58
3.6	MAE and CO of Example 3.3.3 in spatial direction with $M = 2^9$. . .	59
4.1	MAE and CO of Example 4.3.1 with $z(t) = t$, and $w(t) = 1$ for different values of α	75
4.2	MAE and CO of Example 4.3.1 with $z(t) = t$, and $w(t) = e^t$, $t + 1$ for different values of α	75
4.3	MAE and CO of Example 4.3.1 with $z(t) = t^{1/2}$, and $w(t) = 1$ for different values of α	76
4.4	MAE and CO of Example 4.3.2 with different step-sizes Δt and Δx for $\alpha = 0.95$	77

4.5	MAE and CO of Example 4.3.2 with different step-sizes Δt and Δx for $\alpha = 0.6$ and 0.45	77
4.6	MAE and CO of Example 4.3.2 with different Δt , fixing $\Delta x = 0.001$ for different values of α	78
4.7	MAE and CO of Example 4.3.2 with different Δx , fixing $\Delta t = 0.002$ for different values of α	79
4.8	MAE and CO of Example 4.3.3 with different step-sizes Δt and Δx for $\alpha = 0.9, 0.6$, and 0.45	79
4.9	MAE and CO of Example 4.3.3 with different Δt , fixing $\Delta x = 0.001$ for different values of α	80
4.10	MAE and CO of Example 4.3.3 with different Δx , fixing $\Delta t = 0.002$ for different values of α	81
4.11	CPU time (seconds) in calculating MAE for Example 4.3.2 and Example 4.3.3 at different step sizes.	81
5.1	MAE and CO for Example 5.4.1 with $\lambda = 0.5$, $c^2 = 1$, $\alpha = 0.2$	98
5.2	MAE and CO for Example 5.4.1 with $\lambda = 0.5$, $c^2 = 1$, $\alpha = 0.4$	98
5.3	MAE and CO for Example 5.4.2 with $\lambda = 0.5$, $c^2 = 0.5$, $\alpha = 0.4$, $\Delta x = 1/512$	98
5.4	MAE and CO for Example 5.4.2 with $\lambda = 0.5$, $c^2 = 0.5$, $\alpha = 0.4$, $\Delta t = 1/512$	99
