

Table of contents

List of figures	xxi
Nomenclature	xxix
1 Introduction	1
1.1 Magnetism	1
1.2 Spin	3
1.2.1 Collection of interacting spins	5
1.3 Boundary conditions	6
1.3.1 One dimension	7
1.3.2 Higher dimension	7
1.4 Spin models	9
1.4.1 Ising model	9
1.4.2 Heisenberg model	10
1.4.3 Dzyaloshinskii–Moriya interaction term	12
1.5 Topological materials	13
1.5.1 Noncollinear magnetism	17
1.5.2 Chirality	18
1.5.3 Magnetic skyrmions	20
1.6 Phase transition	22

1.6.1	Quantum phase transition	23
1.6.2	Dynamical quantum phase transition	26
1.7	Thermodynamics of quantum systems	27
1.7.1	Basic concepts: quantum states and Observables	28
1.7.2	Internal energy and heat	28
1.7.3	Partition function and statistical description	29
1.7.4	Work in quantum systems	29
1.7.5	Quantum friction	30
1.7.6	Thermodynamic processes	30
1.7.7	Irreversibility and entropy production	31
1.7.8	Applications: quantum heat engines and thermal control	32
1.7.9	Quantum heat engine models	33
1.7.10	Quantum heat engines: Efficiency	33
1.8	Unitary dynamics of quantum systems	35
1.8.1	Evolution of quantum states: The Schrödinger picture	36
1.8.2	Evolution of observables: The Heisenberg picture and conservation laws	37
1.9	Entropy	38
1.9.1	Von Neumann entropy	39
1.9.2	Topological entanglement entropy	40
1.9.3	Kullback–Leibler Divergence class	41
1.10	Motivation	42
1.11	Outline of the thesis	43
2	Topological dynamical quantum phase transition in a quantum skyrmion phase	45

3	Topological entanglement entropy to identify topological order in quantum skyrmions	59
3.1	Introduction	59
3.2	Model and methods	62
3.3	Results and discussion	66
3.4	Conclusions	72
4	Entanglement entropies across dynamical quantum phase transitions: From skyrmionic to ferromagnetic phases	75
4.1	Introduction	75
4.2	Model and methods	78
4.2.1	Spin model	78
4.2.2	Dynamical quantum phase transition	79
4.2.3	Quantum scalar chirality	79
4.2.4	Entanglement entropy	80
4.2.5	Topological entanglement entropy	81
4.3	Results and discussion	81
4.4	Conclusions	85
5	Quantum heat engine with near-zero irreversible work utilizing quantum skyrmion working substance	91
5.1	Introduction	91
5.2	Model	94
5.2.1	Quantum thermodynamic relations	96
5.3	Topological protection	97
5.4	The quantum Otto cycle	98
5.5	Finite time thermodynamics and thermalization	105

5.6	Summary	106
6	Summary and future plans	113
6.1	Summary	113
6.2	Future plans	115
	References	117
	Appendix A Chapter 2	139
A-I	Supplemental material to “Topological dynamical quantum phase transition in a quantum skyrmion phase”	139
A-II	Calculation of critical exponent α	139
	Appendix B Chapter 3	149
B-I	Supplementary to ‘Topological entanglement entropy to identify topological order in quantum skyrmions’	149
B-II	Supplementary methods	149
B-III	Detailed Discussion on degeneracy	149
B-IV	$\mathcal{S}_{\text{topo}}$ boundary	153
B-V	Relation between the correlation length and parameter J_2	153
B-VI	Fidelity	154
B-VII	Universality of fluctuating $\mathcal{S}_{\text{topo}}$ in helical phase	155
B-VIII	Schematic of additional system sizes.	157
	Appendix C Chapter 4	159
C-I	Partitions	159
C-II	Rate of change of entropy compared with rate function for another model undergoing DQPT	160
