List of Figures.....	xvi
List of Abbreviations	xxv
Preface.....	xxvii

CHAPTER 1: INTRODUCTION.....	01
1.1 Background.....	02
1.2 Problem statement and motivation.....	03
1.2.1 Glucose monitoring.....	04
1.2.2 Invasive monitoring.....	04
1.2.3 Semi-invasive monitoring.....	04
1.2.4 Noninvasive monitoring.....	04
1.3 Research approach	05
1.4 Aim of the thesis	06
1.5 Objective of the thesis.....	06
1.6 Research contribution of the present thesis	08
1.7 Outcome of the present thesis work.....	08
1.8 Thesis organization	08

CHAPTER 2: LITERATURE REVIEW	11
2.1 Introduction.....	12
2.1.1 Diabetes Mellitus	13
2.1.2 Type I Diabetes	13
2.1.3 Type II Diabetes.....	14

2.1.4 Gestational Diabetes	14
2.2 Structure of glucose and its physiological concentration	14
2.2.1 Oxidation technique of glucose	16
2.3 Glucose determination techniques can be mainly categorized in three categories	16
2.3.1 Invasive method based glucose sensing.....	16
2.3.2 Minimally invasive method based glucose sensing	17
2.3.2.1 Implantable sensors.....	18
2.3.3 Non-invasive optical method based glucose sensing.....	18
2.4 Tissue optical phantom and its properties.....	19
2.4.1 Tissue optical phantom basic requirements	20
2.4.2 Phantom utilization as a tissue-simulating process for medical purpose.....	21
2.4.3 Optical phantom structural orientations and physical properties.....	23
2.4.4 Selection of tissue optical phantom constituents	24
2.4.5 Tissue optical phantom purposes and their assessment criteria.....	24
2.4.6 Spectrum of the Intralipid TM scattering coefficients.....	25
2.4.7 Lipid based scatterers assessable commercially	25
2.4.8 Biomedical application Intralipid TM suspension.....	26
2.4.9 Medical uses.....	27
2.4.9.1 Antidote.....	27
2.4.9.2 Tissue optical phantom	27
2.4.9.3 Cardio protective agent	27
2.5 Utilization of Intralipid TM based tissue phantom for developing various non- invasive optical techniques for glucose concentration monitoring.....	28
2.5.1 <i>In-vitro</i> Intralipid TM phantom based study for glucose monitoring by Near- infrared transmission and reflectance spectroscopy technique.....	28
2.5.2 <i>In-vitro</i> Intralipid TM phantom based study for glucose monitoring by Occlusion spectroscopy technique	30

2.5.3 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Spatially resolved diffuse reflectance measurement technique	31
2.5.4 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Frequency-domain reflectance technique	33
2.5.5 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Polarimetry technique	34
2.5.5.1 Techniques	35
2.5.5.2 Result	35
2.5.5.3 Conclusion	35
2.5.6 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Raman spectroscopy technique	36
2.5.7 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Optical coherence tomography technique	38
2.5.8 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Fluorescence technique	42
2.5.9 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Photoacoustic technique.....	42
2.5.10 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Time-of-flight technique	44
2.5.11 <i>In-vitro</i> Intralipid™ phantom based study for glucose monitoring by Ultrasound-modulated optical technique	46
2.5.12 Conclusion	47

CHAPTER 3: PROTOTYPE DESIGN, CALIBRATION, METHODOLOGY AND PERFORMANCE ANALYSIS

3.1 Introduction.....	49
3.1.1 Role of Intralipid™ based tissue phantom.....	49
3.1.2 Tissue mimicking phantom.....	50

3.1.3 Preparation of Intralipid™ based tissue phantom.....	51
3.2 Principle of modulated ultrasound and infrared light-based prototype design for glucose concentration measurement in <i>in-vitro</i> biological samples	52
3.2.1 Descriptions of the fabricated prototype.....	54
3.2.2 Prototype fabrication (MUS-IR unit).....	55
3.2.3 Selection of ultrasonic operating frequency	55
3.2.4 Selection of light wavelength.....	56
3.2.5 <i>In-vitro</i> experimentations.....	61
3.2.5.1 Specificity analysis of glucose molecule	61
3.2.5.2 Sensitivity analysis of glucose molecule at 940 nm	62
3.2.6 Amplitude modulation generation	63
3.2.7 Ultra Sound Transmitter (UST) and Ultra Sound Receiver (USR) units.....	64
3.2.8 Sample holder unit.....	65
3.2.9 Synchronous square wave production	66
3.2.10 Infrared light source.....	66
3.2.11 940 nm LED wavelength confirmation.....	67
3.2.12 Infrared (IR) detector	67
3.2.13 Unit for signal processing	67
3.2.14 Result display.....	68
3.3 <i>In-vitro</i> experiment	68
3.3.1 <i>In-vitro</i> investigation utilizing glucose in distill water	68
3.3.1.1 Result analysis	69
3.3.2 <i>In-vitro</i> experiment using glucose in Intralipid™ phantom	69
3.3.2.1 Result analysis	70
3.3.3 Our output signal of human blood plasma sample mixed with Intralipid™ phantom by modulated ultrasound and infrared (MUS-IR) unit	70

3.3.4 <i>In-vitro</i> experiment using healthy and diabetic human blood samples mixed with Intralipid™ phantom medium.....	71
3.3.4.1 Study subjects	71
3.3.4.2 Sample preparation	71
3.3.4.3 Result analysis	73
3.3.4.4 <i>In-vitro</i> analysis of the Intralipid™ phantom mixed with blood plasma samples of the normal healthy subjects	73
3.3.4.5 <i>In-vitro</i> analysis of the Intralipid™ phantom mixed with blood plasma samples of the diabetic subjects.....	74
3.3.4.6 <i>In-vitro</i> analysis of the Intralipid™ phantom mixed with blood serum samples of the normal healthy subjects	75
3.3.4.7 <i>In-vitro</i> analysis of the Intralipid™ phantom mixed with blood serum samples of the diabetic subjects.....	77
3.3.4.8 <i>In-vitro</i> analysis of the Intralipid™ phantom mixed with whole blood samples of the normal healthy subjects	78
3.3.4.9 <i>In-vitro</i> analysis of the Intralipid™ phantom mixed with whole blood samples of the diabetic subjects.....	79
3.4 Extended <i>in-vitro</i> clinical examination.....	81
3.4.1 Study subject.....	81
3.4.2 Preparation of human blood samples	82
3.4.3 Blood plasma sample preparation	82
3.4.4 Blood serum sample preparation	82
3.4.5 Whole blood sample preparation	82
3.4.6 Result analysis	82
3.4.6.1 Stage I	82
3.4.6.2 Stage II.....	84
3.4.6.3 Stage III.....	85
3.4.6.4 Stage IV	87

3.4.7 Conclusion	88
3.5 Calibration.....	88
3.6 Inference	88
3.7 Tests methodology.....	89
3.7.1 Principle of GOD/POD method	89
3.7.1.1 Procedure	89
3.7.1.2 Calculation	90
3.7.2 Invasive glucometer	90
3.7.3 Our prototype unit.....	90
3.8 Performance assessment technique.....	91
3.8.1 Clarke Error Grid analysis	91
3.8.2 Parkes Error Grid analysis	93
3.8.3 Statistical analysis.....	94

CHAPTER 4: GLUCOSE INDUCED OPTICAL TRANSMISSION EFFECT ON INTRALIPID™ BASED PHANTOM 96

4.1 Introduction.....	97
4.2 The effect of glucose on the optical properties of tissue phantom	97
4.3 <i>In-vitro</i> experimental procedure	98
4.3.1 Algorithm concept	99
4.3.2 Peak to peak amplitude calculation.....	101
4.3.2.1 Absolute value (Abs) calculations	101
4.3.2.2 Square value (Sqr) calculations	101
4.4 <i>In-vitro</i> measured spectra results	102
4.5 Discussion	110
4.6 Conclusion	110

CHAPTER 5. <i>IN-VITRO</i> EXPERIMENTAL STUDY BASED RESULTS	112
5.1 <i>In-vitro</i> approach based OGTT study by modulated ultrasound-infrared light method and GOD/POD (Glucose Oxidase/ Peroxidase) method	113
5.1.1 Introduction-Intralipid™ phantom and blood plasma mixed <i>in-vitro</i> study.....	113
5.1.2 Study subjects	113
5.1.3 Experimental procedure	113
5.1.3.1 Preparation of human blood plasma samples.....	113
5.1.4 Result and Discussion	114
5.1.5 Conclusion	119
5.2 Extended <i>in-vitro</i> approach based OGTT and fasting-postprandial-random stage based study by modulated ultrasound-infrared light method and GOD/POD method	119
5.2.1 Introduction.....	119
5.2.2 Study subjects	119
5.2.3 Preparation of human blood plasma samples.....	120
5.2.4 Experimental Protocol	120
5.2.4.1 Phase I: <i>In-vitro</i> Oral Glucose Tolerance Tests (OGTT) investigation.....	120
5.2.4.2 Phase II: <i>In-vitro</i> investigation during fasting, postprandial and random stages	124
5.2.5 Result and Discussion.....	125
5.2.5.1 Result of Phase I	125
5.2.5.2 Result of Phase II.....	130
5.2.6 Conclusion	134
5.3 Measurement of glucose by using modulating ultrasound-infrared light and GOD/POD method in normal and diabetic human blood serum	134
5.3.1 Introduction.....	134
5.3.2 Study subjects	135
5.3.3 Experimental procedure	135

5.3.3.1 Preparation of human blood serum samples	135
5.3.4 Result and Discussion	136
5.3.4.1 Phase I: <i>In-vitro</i> investigation on normal and diabetic human blood serum mixed Intralipid™ samples	136
5.3.4.2 Part I: <i>In-vitro</i> study of normal human blood serum mixed with Intralipid™ samples.....	136
5.3.4.3 Part II: <i>In-vitro</i> study of diabetic human blood serum mixed with Intralipid™ samples.....	136
5.3.4.4 Phase I.....	139
5.3.4.5 Phase II.....	144
5.3.4.6 Phase II.....	145
5.3.5 Conclusion	149
5.4 Measurement of glucose concentration in human whole blood mixed Intralipid™ phantom samples of healthy and diabetic subjects	149
5.4.1 Introduction.....	149
5.4.2 Study subjects	149
5.4.3 Preparation of whole blood samples-experimental steps.....	150
5.4.4 Result and Discussion	150
5.4.4.1 The experiments were-performed in two phases	150
5.4.4.2 Phase I: <i>In-vitro</i> investigation of the blood glucose levels in healthy and diabetic subject's whole blood mixed Intralipid™ samples.....	150
5.4.4.3 Part I.....	151
5.4.4.4 Part II	151
5.4.4.5 Phase I result analysis	152
5.4.4.6 Phase II: <i>In-vitro</i> investigation using fasting, postprandial and random stage based human whole blood samples mixed with Intralipid™ phantom	156
5.4.4.7 Phase II result analysis.....	157
5.4.5 Conclusion	162

5.5 <i>In-vitro</i> investigation using three different ranges of blood glucose concentration levels in various human whole blood mixed with Intralipid™ phantom samples	162
5.5.1 Introduction.....	162
5.5.2 Study subjects	162
5.5.3 Experimental procedures	163
5.5.4 Result and Discussion	164
5.5.4.1 Category I:	166
5.5.4.2 Category II:	169
5.5.4.3 Category III:.....	171
5.5.4.4 Total category (I, II, III) results	174
5.5.5 Conclusion	178
5.6 <i>In-vitro</i> determination of glucose concentration in various optical phantoms	178
5.6.1 Introduction.....	178
5.6.2 Result and Discussion	179
5.6.2.1 Dextrose water solution	179
5.6.2.2 Commercialized milk solution.....	180
5.6.2.3 Chicken breast tissue sample	181
5.6.2.4 Human whole blood sample.....	183
5.6.3 Conclusion	184
<hr/>	
CHAPTER 6: DISCUSSION	185
6.1 Introduction.....	186
6.2 Phantom properties	186
6.3 Assessment and comparison of our total results	187
6.3.1 Deming Regression based analysis.....	188
6.3.2 Linear model validity	190
6.3.3 Paired sample t-tests	191

6.3.4 Mountain Plot analysis.....	193
6.3.5 Bland-Altman Plot analysis	194
6.3.6 Pearson Correlation Coefficient analysis.....	197
6.3.7 Rank Correlation Coefficients analysis	199
6.3.8 ISO compliance analysis.....	201
6.3.9 Clarke Error Grid analysis	202
6.3.10 Parkes Error Grid analysis	204
6.3.11 Accuracy measure analysis	206
6.4 Conclusion	209

CHAPTER 7: CONCLUSION AND FUTURE WORK211

7.1 Conclusion	212
7.2 Recommendations for future work	214
