Title of thesis	<b>i</b>
Dedication	<b>ii</b>
Certificate	<b>iii</b>
Declaration by the candidate and certificate by the supervisor	<b>iv</b>
Copyright transfer certificate	<b>v</b>
Acknowledgment	<b>vi-vii</b>
Contents	<b>viii-xiv</b>
List of Figures	<b>xv-xx</b>
List of Tables	<b>xxi</b>
List of Symbols/Abbreviations	<b>xxii-xxiii</b>
Preface	<b>xxiv-xxvi</b>
<b>Chapter 1: Background and Introduction</b>	<b>1-46</b>
1.1. Navigating Energy and Environmental Concerns on a Global Scale	<b>1</b>
1.2. Renewable Energy Sources	<b>3</b>
1.3. Electrochemical Water Splitting	<b>4</b>
1.3.1. Water-splitting Across Different pH conditions	<b>7</b>
1.3.1.1. Water-Splitting in neutral medium	<b>7</b>
1.3.1.2. Water-Splitting in acidic medium	<b>8</b>
1.3.1.3. Water-Splitting in basic medium	<b>8</b>
1.4. Oxygen Evolution Reaction	<b>9</b>
1.4.1. Mechanism in OER	<b>9</b>
1.4.1.1. The Conventional Adsorbate Evolution Mechanism (AEM)	<b>10</b>
1.4.1.2. The Lattice Oxygen Mechanism (LOM)	<b>12</b>
1.4.1.2.1. In Base	<b>12</b>
1.4.1.2.2. In Acid	<b>14</b>
1.4.2. Electrocatalysts for OER in alkaline environment	<b>14</b>
1.4.2.1. Oxides	<b>15</b>

---

1.4.2.1.1. Fe containing spinels	15
1.4.2.2. Selenides	16
1.4.2.3. Polymers as a conducting support material	18
1.4.2.3.1. Polypyrrole	19
1.4.3. Key parameters for evaluating OER activity	20
1.4.3.1. Electrolyte and electrode	21
1.4.3.2. Overpotential ( $\eta$ )	22
1.4.3.3. Tafel slope (b)	24
1.4.3.4. Electrochemically active surface area (ECSA)	25
1.4.3.5. Reaction order (p)	26
1.4.3.6. Standard electrochemical energy of activation ( $\Delta H_{el}^{0\ddagger}$ )	27
1.4.3.7. Standard electrochemical enthalpy of activation ( $\Delta H^{0\ddagger}$ )	29
1.4.3.8. Standard electrochemical entropy of activation ( $\Delta S^{0\ddagger}$ )	30
1.4.3.9. Stability	32
1.5. Objectives and scope of the thesis	33
1.6. References	37
<b>Chapter 2: Characterization techniques</b>	<b>47-73</b>
2.1. Characterization techniques	47
2.2. Structural analysis	48
2.2.1. Fourier transform infrared spectroscopy (FT-IR)	48
2.2.2. X-ray diffraction patterns (XRD)	50
2.3. Morphological analysis	52
2.3.1. Field emission scanning electron microscopy (FE-SEM)	52
2.3.2. High resolution transmission electron microscopy (HR-TEM)	54
2.3.3. Selected area electron diffraction pattern (SAED)	56
2.4. Elemental analysis	58
2.4.1. Energy dispersive X-ray spectroscopy (EDS)	58
2.4.2. Elemental mapping	58
2.5. Electrochemical analysis	59

---

2.5.1. Open circuit potential (OCP)	61
2.5.2. Cyclic voltammetry (CV)	62
2.5.3. Linear sweep voltammetry (LSV)	65
2.5.4. Electrochemical impedance spectroscopy (EIS)	66
2.5.5. Chronopotentiometry (CP)	68
2.6. <i>Operando</i> spectro-electrochemical analysis	69
2.6.1. <i>Operando</i> UV-Vis spectro-electrochemical analysis	70
2.7. References	72
<b>Chapter 3: Synthesis and characterizations of zinc ferrite particles and performance for OER</b>	<b>74-118</b>
3.1. Abstract	74
3.2. Introduction	74
3.3. Experimental	79
3.3.1. Materials	79
3.3.2. Synthesis of zinc ferrite	79
3.3.3. Preparation of working electrode	81
3.3.4. Electrode preparation for spectro-electrochemical study	82
3.4. Characterizations	82
3.4.1. Physicochemical characterizations	82
3.4.2. Electrochemical characterizations	82
3.4.3. Spectro-electrochemical characterizations	83
3.5. Results and discussion	83
3.5.1. Structural and morphological analysis	83
3.5.1.1. FT-IR study	83
3.5.1.2. XRD study	85
3.5.1.3. SEM study	87
3.5.2. Electrochemical analysis	88
3.5.3. Stability and durability	103
3.5.4. Spectro-electrochemical analysis	105

3.6. Conclusion	106
3.7. References	109
<b>Chapter 4: Synthesis and characterizations of <math>\alpha</math>-MnSe/ppy heterostructures as high-performance electrocatalysts for oxygen evolution reaction with <i>operando</i> mechanistic insights</b>	<b>119-163</b>
4.1. Abstract	119
4.2. Introduction	119
4.3. Experimental	123
4.3.1. Materials	123
4.3.2. Synthesis of $\alpha$ -MnSe	123
4.3.3. Synthesis of polypyrrole	123
4.3.4. Synthesis of $\alpha$ -MnSe/ppy composite	124
4.3.5. Preparation of working electrode	124
4.3.6. Electrode preparation for spectro-electrochemical study	124
4.4. Characterizations	125
4.4.1. Physicochemical characterizations	125
4.4.2. Electrochemical characterizations	125
4.4.3. Spectro-electrochemical characterizations	126
4.5. Results and discussion	126
4.5.1. Physicochemical characterizations	126
4.5.1.1. XRD	126
4.5.1.2. FE-SEM	129
4.5.1.3. HR-TEM	132
4.5.2. Electrochemical analysis	133
4.5.2.1. OER study	133
4.5.2.2. Thermodynamic study	141
4.5.2.3. OER mechanism	147
4.5.2.4. Stability and durability	149
4.5.3. <i>Operando</i> spectro-electrochemical study	149
4.6. Conclusion	152

4.7. References	154
<b>Chapter 5: Synthesis and characterizations of MnMoSe<sub>2</sub>/ppy heterostructures as advanced catalysts for alkaline water oxidation: enhanced OER activity and mechanistic insights via <i>operando</i> spectroscopy</b>	
164-201	
5.1. Abstract	164
5.2. Introduction	164
5.3. Experimental	168
5.3.1. Materials	168
5.3.2. Synthesis of MnMoSe <sub>2</sub>	168
5.3.3. Synthesis of polypyrrole	169
5.3.4. Synthesis of MnMoSe <sub>2</sub> /ppy composite	169
5.3.5. fabrication of working electrode	169
5.3.6. Electrode fabrication for spectro-electrochemical study	170
5.4. Characterizations	170
5.4.1. Physicochemical characterizations	170
5.4.2. Electrochemical characterizations	170
5.4.3. Spectro-electrochemical characterizations	171
5.5. Results and discussion	171
5.5.1. Physicochemical characterizations	171
5.5.1.1. XRD	171
5.5.1.2. FE-SEM	172
5.5.1.3. HR-TEM	176
5.5.2. Electrochemical analysis	177
5.5.2.1. OER study	177
5.5.2.2. Thermodynamic study	185
5.5.2.3. OER mechanism	188
5.5.2.4. Stability and durability	191
5.5.3. <i>Operando</i> spectro-electrochemical study	192

5.6. Conclusion	194
5.7. References	195
<b>Chapter 6: Synthesis, characterization, and electrochemical evaluation of CuMnSe<sub>2</sub>/ppy composite for alkaline water oxidation</b>	<b>202-236</b>
6.1. Abstract	202
6.2. Introduction	202
6.3. Experimental	205
6.3.1. Materials	205
6.3.2. Synthesis of CuMnSe <sub>2</sub>	205
6.3.3. Synthesis of polypyrrole	206
6.3.4. Synthesis of CuMnSe <sub>2</sub> /ppy composite	206
6.3.5. Preparation of working electrode	207
6.3.6. Electrode fabrication for spectro-electrochemical study	207
6.4. Characterizations	207
6.4.1. Physicochemical characterizations	207
6.4.2. Electrochemical characterizations	208
6.4.3. Spectro-electrochemical characterizations	208
6.5. Results and discussion	209
6.5.1. Physicochemical characterizations	209
6.5.1.1. XRD	209
6.5.1.2. FE-SEM	210
6.5.1.3. HR-TEM	213
6.5.2. Electrochemical analysis	214
6.5.2.1. OER study	214
6.5.2.2. Thermodynamic study	220
6.5.2.3. OER mechanism	224
6.5.2.4. Stability and durability	227
6.5.3. <i>Operando</i> spectro-electrochemical study	228
6.6. Conclusion	230

6.7. References	232
<b>Chapter 7: Summary and conclusion</b>	<b>237-242</b>
7.1. Summary	237
7.2. Future scope and perspective	241
<b>LIST OF PUBLICATIONS</b>	<b>243-244</b>
<b>LIST OF CONFERENCES</b>	<b>245</b>
