DEDICATION	i-vii
DEDICATION	ix
ACKNOWLEDGEMENT	xi
ABSTRACT	xiii
TABLE OF CONTENTS	xvii
LIST OF FIGURES	xxiii
LIST OF TABLES	xxxiii
NOTATIONS AND ABBREVIATIONS	xxxv
CHAPTER 1 INTRODUCTION	1
1.1 General	1
1.2 Granular pile	4
1.3 Necessity of replacement materials to aggregates	7
1.3.1 End-of-Life Tires (ELTs)	8
1.4 Research objectives	11
1.5 Organization of the Thesis	13
CHAPTER 2 LITERATURE REVIEW	15
2.1 General	15
2.2 Basic information	15
2.2.1 Working of granular pile	15
2.2.2 Granular pile construction methods	16
2.2.2.1 Non-displacement method	16
2.2.2.2 Displacement method	18
2.2.2.2.1 Vibro replacement method	18
2.2.2.2.2 Vibro displacement method (dry method)	19
2.2.3 Granular pile failure mechanisms	21

2.2.4 Basic relationships	23
2.3 Literature studies	28
2.3.1 Behavior of granular piles under static loading	28
2.3.1.1 Ultimate bearing capacity of unreinforced granular piles (q_{ult})	28
2.3.2 Granular piles subjected to static loading - Laboratory model studies	32
2.3.3 Granular piles subjected to static loading - Numerical studies	41
2.3.4 Granular piles subjected to cyclic loading -Laboratory model studies	50
2.3.5 Literature review on recycled tire materials	56
2.4 Summary	64
2.5 Research gap	65
CHAPTER 3 MATERIALS AND METHODOLOGY	67
3.1 General	67
3.2 Test materials	68
3.2.1 Silty soil	68
3.2.2 Aggregates	71
3.2.3 Recycled tire chips	72
3.2.4 Sand	73
3.2.5 Tire chips - aggregates mixture	74
3.2.5.1 Specific gravity of tire chips - aggregates mixture	75
3.2.5.2 Unit weights of tire chips - aggregates mixture	76
3.2.5.3 Large direct shear test set-up and experimental procedure	77
3.2.6 Encasement materials	79
3.3 Model test procedures for single granular pile	82
3.3.1 Preparation of model test tank	83
3.3.2 Preparation of soil bed	84
3.3.3 Installation of the ordinary granular pile (OGP)	85
3.3.4 Installation of geosynthetic encased granular pile	88

3.3.5	Test variables	91
3.3.6	Loading and Instrumentation	92
3.4	Model test procedures for a group of granular piles under the axisymmetric condition	96
3.4.1	Preparation of model test tank	96
3.4.2	Installation of ordinary and encased granular piles	98
3.4.3	Instrumentation and loading procedure	101
CHAPTER 4	ENGINEERING PROPERTIES OF TIRE CHIPS-AGGREGATES MIXTURES	105
4.1	General	105
4.2	Results and Discussion	106
4.2.1	Dry unit weight of the mix proportions	108
4.2.2	Void ratio of the mixtures	109
4.2.3	Large direct shear tests	111
4.2.3.1	Shear stress versus shear strain behavior	111
4.2.3.2	Mohr-Coulomb failure criterion for the mixtures	113
4.2.3.3	Vertical deformation versus shear strain behavior	116
4.2.3.4	Shear modulus	118
4.3	Optimum mix proportion of tire chips - aggregates mixtures	119
4.3.1	Effect of shear strength parameters of the mixture on the load-bearing capacity of granular piles	119
4.4	Summary	121
CHAPTER 5	MODEL TESTS ON SINGLE GRANULAR PILE	123
5.1	General	123
5.2	Test series	124
5.3	Results and Discussions	129
5.3.1	Response of granular pile under static loading	129
5.3.1.1	Analysis of load intensity-settlement behavior of OGP and VEGP	129

5.3.1.2	Efficiency of optimum mix proportion	131
5.3.1.3	Analysis of load intensity ratio (β)	133
5.3.2	Response of granular pile under cyclic loading	134
5.3.2.1	Cyclic induced settlement (S_c) of the loading plate	134
5.3.2.2	Efficiency of optimum mix proportion	138
5.3.3	Response of different configurations of encasements under static loading	143
5.3.3.1	The influence of tire content on granular pile bulging behavior	148
5.3.4	Effect of principle parameters on the behavior of granular piles under cyclic loading	149
5.3.4.1	Behavior of granular pile under different encasements	150
5.3.4.2	Behavior of granular pile under different encasement configurations	153
5.3.4.3	Behavior of granular pile under different loading frequencies (f_{cy})	155
5.3.4.4	Behavior of granular pile under different cyclic loading amplitudes (q_{cy})	158
5.3.4.5	Behavior of granular pile under different L/D ratio	161
5.3.4.6	Behavior of granular pile under different end conditions	163
5.3.4.7	Behavior of granular pile under different soil conditions	165
5.4	Summary	167
CHAPTER 6	MODEL TESTS ON GROUP OF GRANULAR PILES	169
6.1	General	169
6.2	Results and Discussion	172
6.2.1	Effect of geosynthetic encasements	172
6.2.1.1	Performance of group of granular piles under static loading	172
6.2.1.2	Performance of group of granular piles under cyclic loading	175
6.2.2	Performance of group of granular piles under different cyclic loading amplitudes (q_{cy})	181

6.2.3	Performance of group of granular piles under different cyclic loading frequencies (f_{cy})	187
6.3	Summary	191
CHAPTER 7 FINITE ELEMENT ANALYSIS OF MODEL STUDIES		193
7.1	General	193
7.2	Finite element analysis using PLAXIS 3D	193
7.3	Comparison of laboratory model tests and PLAXIS-3D analysis	199
7.3.1	Validation of past data	199
7.3.2	Single granular piles	200
7.3.2.1	Load intensity-settlement variation	201
7.3.2.1.1	Ordinary granular pile (OGP)	201
7.3.2.1.2	Vertically encased granular pile (VEGP)	203
7.3.2.2	Lateral deformation/bulging of granular pile	204
7.3.2.3	Validation of vertical, horizontal, and combined encasement	209
7.3.3	Group of granular piles	216
7.3.3.1	OGP – (25% TC + 75% AG)	218
7.3.3.2	VEGP – (25% TC + 75% AG)	219
7.4	Summary	221
CHAPTER 8 CONCLUSIONS AND FUTURE SCOPE		223
8.1	General	223
8.2	Engineering properties of tire chips - aggregates mixtures	224
8.3	Static model tests on single granular piles	225
8.4	Cyclic model tests on single granular piles	226
8.5	Effect of principle parameters on single granular piles under cyclic loading	227
8.6	Static and cyclic model tests on a group of granular piles	228
8.7	Plaxis 3D validations	229
8.8	Limitations and Future Scope	230
