<i>List of Figures</i>	xi-xv
<i>List of Tables</i>	xvi
<i>List of Abbreviations</i>	xvii-xviii
<i>List of Symbols</i>	xix- xix
<i>Preface</i>	xx-xxi
<b>CHAPTER 1</b>	<b>1-32</b>
<b>Introduction and Scope of the Thesis</b>	
1.1 Introduction	3
1.2 Enzyme based glucose sensing	6
1.2.1 First Generations Enzyme based Glucose Sensors	6
1.2.2 Second generations Enzyme based Glucose sensing	7
1.2.3 Third-Generation Enzyme-Based Glucose Sensor	9
1.3 Non Enzymatic Based Glucose Sensors (Metal Oxide Sensors)	10
1.3.1 Working of Non-Enzymatic Glucose Sensors	12
1.4 Characterization Technique for Evaluation of Hybrid Oxide Nano Structures based Glucose Sensors	13
1.4.1 Scanning Electron Microscopy	13
1.4.2 Transmission Electron Microscopy	14
1.4.3 X-Ray Diffraction	16
1.4.4 Cyclic Voltammetry	18
1.4.5 Electrical Characterization	20
1.5 Literature Review	20
1.5.1 Review of the Enzyme-less Glucose Sensing	21

1.5.2	Review of FET Based Enzymeless Glucose Sensing	25
1.5.3	Review of EGFET Based Enzymeless Glucose Sensing	25
1.5.4	Major Observation from the Literature Survey	27
1.6	Motivation and problem Definition	28
1.7	Scope of The Thesis	29

## **CHAPTER 2** **33-70**

### **Superficial fabrication of gold nanoparticles modified CuO nanowires electrode for non-enzymatic glucose detection\***

2.1	Introduction	35
2.2	Experimental Details	38
2.2.1	Electrode Prepration	38
2.2.1.1	Prepration of Cu(OH) <sub>2</sub> NWs Electrode	38
2.2.1.2	Prepration of CuO NWs Electrode	40
2.2.1.3	Prepration of gold nano particle modified CuO NWs electrode	40
2.2.2	Electrode Characterizations and Electrochemical Set-up	41
2.3	Results and Discussions	42
2.3.1	Characterization of Electrode	42
2.3.1.1	XRD Characterization of the electrode	42
2.3.1.2	SEM Characterizations of Electrode	43
2.3.1.3	TEM characterization of the Electrode	44
2.3.1.4	XPS characterizations of the Electrode	48
2.3.2	Electro catalytic ability of electrode towards Glucose oxidations	50
2.3.3	Determination of Electrolyte Concentrations (NaOH)	52
2.3.4	Determination of Suitable Electrode for Glucose Sensing	53

2.3.5	Transient Current Response towards Glucose at Potential of 0.6V	55
2.3.6	Electrode Performance towards the Different Glucose Concentration	56
2.3.7	Glucose sensing at higher Concentration of NaOH	58
2.3.8	Reusability, Reproducibility, and Stability Tests	64
2.3.9	Measurement of Glucose in Human Serum Samples	67
2.4	Conclusion	69

### **CHAPTER 3** **71-86**

#### **CuO Nanowire based Extended-Gate Field-Effect-Transistor (FET) for Enzyme-Free /Receptor-Free Glucose Sensing Applications**

3.1	Introduction	73
3.2	Experimental Details	76
3.2.1	Materials used	76
3.2.2	Electrode preparation	76
3.2.2.1	Preparation of Cu (OH) <sub>2</sub> NWs Electrode	76
3.2.2.2	Preparation of CuO NWs	77
3.3	Results and Discussion	77
3.3.1	Electrode Characterization and Electrical Measurement	77
3.3.2	Characterization of CuO NWs electrode	80
3.3.3	Glucose sensing of CuO NWs Electrode based EGFET	80
3.3.4	Human serum Sample Measurement	84
3.4	Conclusion	85

### **CHAPTER 4** **87-106**

#### **CuO Nanoparticle Decorated ZnO Nanorods based Extended-Gate Field-Effect-Transistor (EGFET) Enzyme-Free Glucose Sensing Applications**

4.1	Introduction	89
-----	--------------	----

4.2	Experimental Details	91
4.2.1	Materials Used	91
4.2.2	Electrode preparation	91
4.2.2.1	Preparation of ZnO seed layer on FTO substrate	91
4.2.2.2	Preparation of ZnO nanorods	91
4.2.2.3	Modification of ZnO nanorods through CuO NPs	92
4.3	Results and Discussions	92
4.3.1	Electrical Measurements Setup	92
4.3.2	XRD of the Electrode	93
4.3.2.1	Electrode Characterizations	93
4.3.2.2	FESEM of the Electrode	94
4.3.2.3	TEM Analysis of the Electrode	95
4.3.2.4	XPS Analysis of the electrode	96
4.3.3	Sensing of glucose in solution through EGFET	98
4.4	Sensors performance-Repeatibility, Reproducibility and Stability	102
4.5	Human Serum Measurements	103
4.6	Conclusion	105
<b>CHAPTER 5</b>		<b>107-114</b>
<b>Conclusion and Future Scope</b>		
5.1	Introduction	109
5.2	Summary and Conclusion	110
5.3	Future Scope of Work	113
<i>References</i>		115-126
<i>Author's Relevant Publications</i>		127-127
<i>Others relevant Publications</i>		128-129

## LIST OF FIGURES

---

<b>Figure 1.1:</b>	Number of diabetic patients (in millions) worldwide with time (years) (International Diabetes Federation., 2017).	4
<b>Figure 1.2:</b>	Health care cost for a diabetic patient (da Rocha Fernandes et al., 2016).	5
<b>Figure 1.3:</b>	Schematic diagram of 1st generation enzymatic based glucose sensing (b)cyclicvoltammograms(CVs)of Prussian blue (PB) modified electrode absence (curve a) and presence (curves b and c)of0.3mMand1.2mMH <sub>2</sub> O <sub>2</sub> ,respectively. ( <a href="https://pubs.rsc.org/en/content/articlehtml/2015/ay/c5ay01329a">https://pubs.rsc.org/en/content/articlehtml/2015/ay/c5ay01329a</a> ).	7
<b>Figure 1.4:</b>	Schematic diagram of 2nd generation enzymatic based glucose sensing.	08
<b>Figure 1.5:</b>	Schematic diagram of 3rd generation enzymatic based glucose sensing.	10
<b>Figure 1.6:</b>	Graph between total numbers of publication for non- enzymatic glucose sensors with respect to time (years) Zhu et al., 2016, Advances in non-enzymatic glucose sensors based on metal oxides.J.Mater.Chem.B( <a href="https://doi.org/10.1039/C6TB02037B">https://doi.org/10.1039/C6TB02037B</a> )9uj]	11

<b>Figure 1.11:</b>	Semiconductor parameter analyzer for the measurement of various electrical parameters	20
<b>Figure 2.1:</b>	(a) Fabrication step of gold modified CuO NWs on Cu foil electrode, and (b) Bendable copper foil	40

<b>Figure 2.2:</b>	Electrochemical set-up for the detection of glucose	<b>42</b>
<b>Figure 2.3:</b>	The XRD pattern of (a) Cu electrode, (b) Cu (OH) <sub>2</sub> NWs electrode, (c) CuO NWs electrode, and (d) Au NPs modified CuO NWs electrode	<b>43</b>
<b>Figure 2.4:</b>	The SEM images of (a) Cu electrode, (b) Cu (OH) <sub>2</sub> NWs electrode, (c) CuO NWs electrode, and (d) Au NPs modified CuO NWs electrode.	<b>44</b>
<b>Figure 2.5:</b>	The TEM images of free-standing Au modified CuO NWs; (b) SAED pattern of selected area, (c) TEM image of single Au NPs modified CuO NWs, (d) HRTEM image for Au NPs and CuO NWs (Further magnified version is view in inset for d-spacing evaluation).	<b>46</b>
<b>Figure 2.6:</b>	TEM image of Au NPs modified CuO NWs	<b>46</b>
<b>Figure 2.7:</b>	Calculation of d-spacing for CuO NWs	<b>47</b>
<b>Figure 2.8:</b>	Calculation of d-spacing for Au NPs.	<b>47</b>
<b>Figure 2.9:</b>	The HAADF-STEM images of single free-standing Au modified CuO NWs, (b) Magnified view of STEM image with zoomed Au NPs and CuO NWs, (c) Mapping of CuO NWs, (d) Mapping of Au NPs, and (e) EDS spectrum of the selected area	<b>48</b>
<b>Figure 2.10:</b>	XPS analysis.(a) XPS spectrum of CuO NWs with GNP showing full scan survey (b) and corresponding de-convoluted peaks in the high-resolution spectra for O 1s (c) Cu 2p (d) Au 4f	<b>49</b>
<b>Figure 2.11:</b>	(a) Glucose detection mechanism in CuO, (b) Glucose detection mechanism in Au, and (c) Glucose detection mechanism in CuO NWs/AuNPs structure under applied potential.	<b>52</b>
<b>Figure 2.12:</b>	Electrocatalytic effect of different concentration of NaOH (a) 10 mM, (b) 25 mM, (c) 50 mM, (d) 100 mM, and (e) 200 mM with scan rate 100 mV/s.	<b>53</b>
<b>Figure 2.13:</b>	C-V plots of Cu, Cu(OH) <sub>2</sub> NWs, CuO NWs, and Au NPs modified CuO NWs electrodes at 0 mM and 4mM of glucose, respectively.	<b>54</b>
<b>Figure 2.14:</b>	Transient current responses of Au NPs modified CuO NWs at different working potentials and successive additions of 0.25 mM glucose into 0.1 M NaOH solution	<b>56</b>
<b>Figure 2.15:</b>	C-V plots of Au modified CuO NWs electrode at a different concentration of glucose from 0 mM to 8mM.	<b>57</b>
<b>Figure 2.16:</b>	Transient current responses of Au NPs modified CuO NWs at 0.6 V with successive addition of glucose (0.1 mM, 0.2 mM, 1 mM, 1 mM, 1 mM, and 1 mM). Transient response with a low	<b>57</b>

concentration of glucose (0.5  $\mu$ M, 1 $\mu$ M, 5 $\mu$ M, 10 $\mu$ M, 25 $\mu$ M, and 50 $\mu$ M) is shown in the inset of the figure.

- Figure 2.17:** Sensitivity plot of Au modified CuO NWs electrode for the different concentration of glucose from 0.5  $\mu$ M to 8 mM. **58**
- Figure 2.18:** C-V curve of the electrode.(a) Current density versus potential graph for different type of electrode (b) Current density of CuO NWs electrode with different concentration of glucose from 0 to 5mM **60**
- Figure 2.19:** C-V graph at 1M NaOH solution with successive addition of glucose from 0 mM to 44.36 mM glucose solution (b) Linearity graph between current density and concentration at 0.55 V of the reference voltage **60**
- Figure 2.20:** (a) Electrochemical characterization (a) C-V obtain at 1mM glucose in 0.5M NaOH solution at different scan rates.(b) the graph between peak current density versus scan rate . **62**
- Figure 2.21:** (a).Nyquist plot for different copper electrode Cu(OH)2NWs,Au/CuO NWs, CuONWs, and Au/CuO NWs at OCP(open circuit potential) (b) Anti-interference property of the CuO NWs decorated by GNP electrode with 1mM of glucose and with 0.1 mM each of UA,AA,and DA.then 1mM of glucose with 0.05mM sucrose, lactose, and maltose and 1mM of glucose added in the last **62**
- Figure 2.22:** (a) C-V graph at 1M NaOH solution with successive addition of glucose from 0 mM to 44.36 mM glucose solution (b) Linearity graph between current density and concentration at 0.55 V of the reference voltage **63**
- Figure 2.23:** (a) C-V graph with 1M NaOH solution and 1mM glucose concentration with different scan rates. (b) The linearity graph between current density and potential with different scan rates **63**
- Figure 2.24:** (a) Reusability graph between at 0.5M NaOH and 1mM glucose concentration (b) constant current of 5mA obtained at 0.55vollt potential **65**
- Figure 2.25:** (a) Reproducibility graph from 1 electrode to 10 electrode after 1mM addition of glucose(b) The histogram curve at 0.55V potential and 1mM glucose **66**
- Figure 2.26:** (a) C-V graph between taken between the interval of 3days and up to 30 days (b) corresponding histogram from 0 day up to 30 days with interval of 3 days. **66**
- Figure 2.27:** Transient response of Au NPs modified CuO NWs electrode at 0.6 V with successive addition of human blood serum corresponding **67**

to 1 mM glucose. The nearly linear glucose response of blood serum in the inset.

<b>Figure 3.1:</b>	Measurement set-up of the CW NWs electrode based EG-FET sensor for glucose	<b>78</b>
<b>Figure 3.2:</b>	(a) XRD of CuO NWs, (b) FESEM of CuO NWs at 1 $\mu$ m (c) Magnified version of CuO nanowires at 500nm (d) further magnified view for CuO NWs at 300nm.	<b>79</b>
<b>Figure 3.3:</b>	(a) The HRTEM images of free standing CuO NWs, (b) SAED patten of selected area, (c) Magnified version of single CuO NWs, (d) further magnified view for CuO NWs.	<b>79</b>
<b>Figure 3.4:</b>	(a) Transfer characteristics (IDS-VREF) of CuO NWs based EGFET biosensors with VDS=100 mV for detection of glucose in PBS (100 mM, pH=7.4). (b) Time dependent response (VREF-Time) for step wise changes in the glucose (1–12 mM).	<b>83</b>
<b>Figure 3.5:</b>	V <sub>REF</sub> shift of the CuO NWs based EGFET biosensor as a function of glucose concentration (1–12mM). Sensitivity have been found 3.03 mV/mM with R <sup>2</sup> =0.9968 for EGFET biosensor. (b) Change inVREF of the CuO NWs based EGFET biosensor with respect to various saccharide concentrations in PBS (100 mM, pH=7.4).	<b>83</b>
<b>Figure 4.1:</b>	(a) Measurement set-up of theZnO NRs decorated with CuO NPs connected to the gate EGFET for glucose sensing applications.(b) Schematic diagram of non enzymatic decetion of glucose through step by step electrode fabrication	<b>93</b>
<b>Figure 4.2:</b>	XRD patterns of CuO NPs decorated ZnO nanarods on FTO	<b>94</b>
<b>Figure 4.3:</b>	(a) Low resolutions FESEM Image (b) high resolutions FESEM image of ZnO NRs with CuONPs	<b>95</b>
<b>Figure 4.4:</b>	EDS spectra ZnO NRs decorated with CuO NPs	<b>95</b>
<b>Figure 4.5:</b>	(a) TEM images of free standing CuONps on ZnO nano rods, (b) Magnified version of single ZnO NR with CuO NPs, (c) further magnified view for ZnO with CuO NPs (d) SAED patten of selected area,	<b>96</b>
