Extended Abstract	xxvi
Chapter 1 INTRODUCTION	1-11
1.1 Water Scarcity	1
1.2 Wastewater Reclamation	2
1.3 Integrated Water and Wastewater Management (IWWM)	4
1.4 Appropriate Treatment Technology (WWTT)	5
1.5 Decision Support System (DSS)	8
1.6 Research Issues	9
1.7 Objectives of the Study	10
1.8 Organization of the Thesis	11
Chapter 2 LITERATURE REVIEW	13-70
2.1 Global Scenario in Wastewater Reclamation	14
2.2 Identification of Potential Factors Affecting Wastewater Reclamation	16

2.3 Methods for Selection of Key Factors and the Interrelationships	25
2.4 Reuse Purpose and Quality Criteria	26
2.5 Reclaimed Water Demand Estimation and Allocation	27
2.6 Review of Wastewater Treatment Technologies	31
2.6.1 Activated Sludge Process (ASP)	32
2.6.2 Sequencing Batch Reactor (SBR)	33
2.6.3 Anaerobic-Anoxic-Oxic (A2O) Process	34
2.6.4 Cyclic Activated Sludge Technology (C. Tech)	36
2.6.5 Biological Filtration and Oxygenated Reactor (BIOFOR)	37
2.6.6 High Rate Activated Sludge BIOFOR-F Technology	38
2.6.7 Soil Biotechnology (SBT)	39
2.6.8 Constructed Wetlands (CW)	41
2.6.9 Waste Stabilization Pond (WSP)	42
2.6.10 Duckweed Pond System (DPS)	44
2.6.11 Moving Bed Biofilm Reactor (MBBR)	45
2.6.12 Membrane Bioreactor (MBR)	46
2.6.13 Trickling Filter	47
2.6.14 Submerged Aerated Fixed Film (SAFF)	49
2.6.15 Up-flow Anaerobic Sludge Blanket Reactor + Extended Aeration (UASB+EA)	50
2.6.16 Oxidation Ditch (OD)	51
2.6.17 Anaerobic Lagoon followed by Stabilization Pond (AL+SP)	52
2.6.18 Fluidized Aerated Bed (FAB)	53
2.6.19 Modified Ludzack Ettinger (MLE) Process	55

2.6.20 Bardenpho Process (BP)	56
2.6.21 Step-feed Biological Nitrogen Removal (BNR) Process	57
2.6.22 Wuhrmann Process (WP)	58
2.6.23 Coagulation + Flocculation + Rapid Sand Filters (C+F+RSF)	59
2.6.24 Microfiltration/ Ultrafiltration and Reverse Osmosis (MF/UF + RO)	59
2.7 Performance Characteristics of Wastewater Treatment Technologies (WWTTs)	60
2.8 Land, Energy, Capital Cost and O&M Cost Requirements of WWTTs	62
2.9 Water Pricing	62
2.10 DSS for Appropriate Wastewater Treatment Technology Selection, Demand Allocation and Water Pricing	65
2.11 Identification of Research Gaps	68
2.12 Scope of the Present Study	70
Chapter 3 RESEARCH METHODOLOGY	71-113
3.1 Selection of Key Factors Affecting IWWM	72
3.1.1 Enlisting of Potential Factors, Questionnaire Survey and Expert Ratings	74
3.1.2 Finalization of Key Factors based on Expert Ratings	75
3.1.3 Developing Importance Hierarchy of Key Factors Using Interpretive Structural Modelling (ISM)	75
3.1.4 Classification (as Driver, Dependent, Autonomous and Linkage Groups) of Key Factors using MICMAC (Matrix of Cross Impact – Multiplications Applied to Classification)	77

3.2 Finalized Quality Criteria of Reclaimed Water for Reuse Purposes	78
3.3 Finalized WWTTs for DSS_IWWM	79
3.3.1 Performance Efficiencies of WWTTs	79
3.3.2 Land, Energy, Capital Cost and O&M Cost Requirements	79
3.4 Framework for Selection of Appropriate Wastewater Treatment Technologies (WWTTs)	91
3.4.1 Prediction of Final Effluent Quality in a Chain of Treatment Processes	91
3.4.2 Finalization of Decision Criteria for Selection of Appropriate WWTTs	91
3.4.3 Weightage Calculation for Decision Criteria using Full Consistency Method (FUCOM)	91
3.4.4 Sensitivity Analysis for Weightage of Decision Criteria	93
3.4.5 Least Weighted Cost for WWTTs using Weighted Sum Method (WSM)	93
3.4.6 Ranking of WWTTs	94
3.5 Demand Estimation for Reclaimed Water	98
3.6 Competitive Uses and Procedure for Demand Allocation and Pricing	101
3.7 DSS for IWWM (DSS_IWWM)	104
3.7.1 Working Principle of DSS_IWWM Application	108
3.7.2 Basic Data Requirements	109
3.7.3 Output of DSS_IWWM	111
Chapter 4 RESULTS AND DISCUSSION	115-224
4.1 Finalization of Key Factors Hierarchy Affecting IWWM	115

4.2 Developing Importance Hierarchy of Key Factors Using ISM	116
4.2.1 Representation of Pairwise Relationships Between Factors in Structural Self-Interacting Matrix (SSIM)	116
4.2.2 Binary Representation of Interrelationships Between Factors in Adjacency Matrix	117
4.2.3 Establishment of Indirect Relationships Between Factors Using Reachability Matrix	117
4.2.4 Identification of Hierarchical Relationships Between Factors Using Level Partitions	117
4.2.5 Importance Hierarchy Structure of Key Factors Obtained Using ISM	122
4.3 Classification of Key Factors using MICMAC	124
4.4 Discussion and Strategies for Effective IWWM	125
4.5 Validation of DSS_IWWM Through Case Studies of five cities of Uttar Pradesh	131
4.5.1 Kanpur City	131
4.5.1.1 Identification of Potential Reuses	131
4.5.1.2 Quality Criteria for Identified Reuses	132
4.5.1.3 Importance Weightage for Decision Criteria	133
4.5.1.4 Estimation of Reclaimed Water Demand	133
4.5.1.5 Identification of inputs for application in DSS_IWWM	137
4.5.1.6 Selection of Appropriate Treatment Technologies	138
4.5.1.7 Reclaimed Water Demand Allocation and Pricing	143
4.5.1.8 Important Observations	145
4.5.2 Varanasi City	147

4.5.2.1 Identification of Potential Reuses	148
4.5.2.2 Quality Criteria for Identified Reuses	149
4.5.2.3 Importance Weightage for Decision Criteria	149
4.5.2.4 Estimation of Reclaimed Water Demand	151
4.5.2.5 Identification of inputs for application in DSS_IWWM	153
4.5.2.6 Selection of Appropriate Treatment Technologies	153
4.5.2.7 Reclaimed Water Demand Allocation and Pricing	160
4.5.2.8 Important Observations	163
4.5.3 Lucknow City	164
4.5.3.1 Identification of Potential Reuses	165
4.5.3.2 Quality Criteria for Identified Reuses	166
4.5.3.3 Importance Weightage for Decision Criteria	166
4.5.3.4 Estimation of Reclaimed Water Demand	166
4.5.3.5 Identification of inputs for application in DSS_IWWM	170
4.5.3.6 Selection of Appropriate Treatment Technologies	171
4.5.3.7 Reclaimed Water Demand Allocation and Pricing	172
4.5.3.8 Important Observations	174
4.5.4 Prayagraj City	175
4.5.4.1 Identification of Potential Reuses	176
4.5.4.2 Quality Criteria for Identified Reuses	177
4.5.4.3 Importance Weightage for Decision Criteria	177
4.5.4.4 Estimation of Reclaimed Water Demand	179
4.5.4.5 Identification of inputs for application in DSS_IWWM	180
4.5.4.6 Selection of Appropriate Treatment Technologies	180

4.5.4.7 Reclaimed Water Demand Allocation and Pricing	185
4.5.4.8 Important Observations	186
4.5.5 Agra City	187
4.5.5.1 Identification of Potential Reuses	188
4.5.5.2 Quality Criteria for Identified Reuses	189
4.5.5.3 Importance Weightage for Decision Criteria	189
4.5.5.4 Estimation of Reclaimed Water Demand	189
4.5.5.5 Identification of inputs for application in DSS_IWWM	193
4.5.5.6 Selection of Appropriate Treatment Technologies	194
4.5.5.7 Reclaimed Water Demand Allocation and Pricing	195
4.5.5.8 Important Observations	196
4.6 Application of DSS_IWWM on Cities of Other States of India	197
4.7 Comparison of Appropriate WWTs Obtained for Different Cities Towards Same Target Quality	206
4.8 Sensitivity Analysis of Decision Criteria (Land, Energy, Capital Cost and O&M Cost)	216
4.9 Observation from the Application of DSS_IWWM on Indian Cities	220
Chapter 5 SUMMARY AND CONCLUSIONS	225-237
5.1 Summary and Conclusions	225
5.2 Research Contribution to Existing Literature	233
5.3 Implications for Practice	234
5.4 Implications of Research for Policy Formulation	235
5.5 Limitations	236

5.6 Scope for Future Studies	237
