<b>Preface</b>	<b>xxi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Fractional Calculus . . . . .	1
1.1.1 Definitions and Properties of Fractional Integrals and Derivatives	2
1.1.2 Generalized Fractional Integral and Derivatives . . . . .	4
1.2 Fractional Variational Problems . . . . .	5
1.3 Fractional Sturm-Liouville Problems . . . . .	7
1.4 Motivation . . . . .	8
1.5 Literature Review . . . . .	10
1.5.1 Literature Review on Fractional Variational Problem . . . . .	10
1.5.2 Literature Review on Fractional Sturm-Liouville Problem . . . . .	13
1.6 Thesis Objectives . . . . .	15
1.7 Outline of the Thesis . . . . .	16
<b>2 Numerical Approximation of Fractional Variational Problems with Several Dependent Variables Using Jacobi Poly-Fractonomials</b>	<b>19</b>
2.1 Introduction . . . . .	20
2.2 The Fractional Variational Problem and Euler-Lagrange Equations . . . . .	20
2.3 Jacobi Poly-fractonomial and the Numerical Scheme for Fractional Variational Problems . . . . .	22
2.3.1 Solving the Fractional Variational Problems . . . . .	23
2.4 Convergence Analysis . . . . .	24
2.5 Error Analysis . . . . .	28

---

2.6	Illustrative Numerical Examples . . . . .	31
2.7	Conclusions . . . . .	39
<b>3</b>	<b>Approximation Schemes for a Quadratic Type Generalized Isoperimetric Constraint Fractional Variational Problems</b>	<b>41</b>
3.1	Introduction . . . . .	42
3.2	The GICFVPs and Numerical Schemes . . . . .	43
3.2.1	Problem Statement . . . . .	43
3.2.2	The Linear Scheme(S1) . . . . .	44
3.2.3	The Quadratic Scheme(S2) . . . . .	48
3.2.4	The Quadratic-Linear Scheme(S3) . . . . .	53
3.3	Error Analysis and Convergence of the Eigenvalues . . . . .	54
3.3.1	Error Analysis of Linear Scheme(S1) . . . . .	54
3.3.2	Error Analysis of Quadratic Scheme(S2) . . . . .	57
3.3.3	Convergence of the Eigenvalues for Schemes S1 and S2 . . . . .	60
3.4	Numerical Results and Discussion . . . . .	62
3.5	Conclusions . . . . .	70
<b>4</b>	<b>Variational and Numerical Approximations for Higher-Order Fractional Sturm–Liouville Problems</b>	<b>71</b>
4.1	Introduction . . . . .	72
4.2	Preliminaries . . . . .	73
4.3	Higher-Order Regular Fractional Sturm-Liouville Problem . . . . .	73
4.3.1	Eigenvalues for Higher-Order Fractional Sturm-Liouville Problem . . . . .	79
4.3.2	The Lowest (First) Eigenvalue . . . . .	86
4.4	Numerical Approximation to Variational Form of Higher-Order Fractional Sturm-Liouville Problem . . . . .	88
4.5	Convergence Analysis . . . . .	90
4.6	Numerical Results and Discussions . . . . .	92
4.7	Conclusions . . . . .	95
<b>5</b>	<b>Variational Approach for Solving Regular N-dimensional Fractional Sturm-Liouville Problems of Order Between <math>(0, 1]</math></b>	<b>97</b>
5.1	Introduction . . . . .	98
5.2	Existence of Eigenvalues for Regular $N$ -Dimensional Fractional Sturm-Liouville Problem . . . . .	99
5.2.1	Example . . . . .	114
5.2.2	Numerical Validation . . . . .	115
5.3	Conclusions . . . . .	116
<b>6</b>	<b>Conclusions and Future Work</b>	<b>117</b>
6.1	Conclusions . . . . .	117

---

6.2 Future Work . . . . .	119
<b>Bibliography</b>	<b>121</b>
<b>List of Publications</b>	<b>135</b>

# List of Figures

2.1	Exact solution and approximate solution of $y_1(t)$ . . . . .	31
2.2	Exact solution and approximate solution of $y_2(t)$ . . . . .	32
2.3	The $L^\infty$ norm error against $N$ . . . . .	32
2.4	The absolute error for combined $y_1$ and $y_2$ with $N = 6$ . . . . .	33
2.5	Comparison of the approximate solution $y_N^{*1}(t)$ for $\alpha = 0.8$ , with different $N$ and exact solution $y_1^*(t)$ for $\alpha = 1$ . . . . .	34
2.6	Comparison of the approximate solution $y_N^{*2}(t)$ for $\alpha = 0.8$ , with different $N$ and exact solution $y_2^*(t)$ for $\alpha = 1$ . . . . .	34
2.7	The function $y_N^{*1}(t)$ when $N = 4$ at different values of $\alpha$ . . . . .	35
2.8	The function $y_N^{*2}(t)$ when $N = 4$ at different values of $\alpha$ . . . . .	35
2.9	The absolute error for $y_1$ and $y_2$ with $N = 6$ and $\alpha = 0.9$ . . . . .	36
2.10	Comparison of the approximate solution $y_N^{*1}(x)$ for $\alpha = 0.9$ , with different $N$ , and exact solution $y_1^*(x)$ for $\alpha = 1$ . . . . .	37
2.11	Comparison of the approximate solution $y_N^{*2}(x)$ for $\alpha = 0.9$ , with different $N$ , and exact solution $y_2^*(x)$ for $\alpha = 1$ . . . . .	37
2.12	Approximate solution $y_N^{*1}(x)$ for $N = 4$ with different values of $\alpha$ , and exact solution $y_1^*(x)$ for $\alpha = 1$ . . . . .	38
2.13	Approximate solution $y_N^{*2}(x)$ for $N = 4$ with various values of $\alpha$ , and exact solution $y_2^*(x)$ for $\alpha = 1$ . . . . .	38
3.1	Comparison of the exact solution ( $\alpha = 1$ ) and other numerical solution using S1, S2 and S3 for various $\alpha$ and $\mathcal{N} = 16, z(t) = t, \omega(t) = 1$ . . . . .	65
3.2	The plots of the numerical solution for $\alpha = 0.99, z(t) = t, w(t) = 1$ using S1, S2, and S3 at various values of $\mathcal{N}$ and the exact solution ( $\alpha = 1$ ). . . . .	66
3.3	Comparison of the exact solution ( $\alpha = 1$ ) and other numerical solution using S1, S2 and S3 for various $\alpha$ and $\mathcal{N} = 16, z(t) = t, \omega(t) = \exp(t)$ . . . . .	66
3.4	The plots of the numerical solution for $\alpha = 0.99$ using S1, S2, and S3 at various values of $\mathcal{N}$ and the exact solution ( $\alpha = 1$ ). $z(t) = t, \omega(t) = \exp(t)$ . . . . .	67
4.1	Plot for the approximated eigenfunction function $y_N(t)$ for fixed $\alpha = 1$ and various values of $N$ . . . . .	93

---

4.2 Plot for the approximated eigenfunction function  $y_N(t)$  for fixed  $N = 4$  and different values of  $\alpha$ . . . . . 93

# List of Tables

2.1	Absolute error calculation for fixed $\alpha = 0.9$ from the numerical solutions only. . . . .	39
3.1	Convergence of the functional $J$ using S1 for $z(t) = t, \omega(t) = 1$ . . . .	64
3.2	Relative error calculation for fixed $\alpha = 0.9$ and $z(t) = t, \omega(t) = 1$ using S1. . . . .	64
3.3	Ratios of the relative error for fixed $\alpha = 0.9$ and $z(t) = t, \omega(t) = 1$ based on the Table 3.2. . . . .	64
3.4	Convergence order (CO) and maximum absolute error (MAE) for scheme S1 using different value of $\alpha$ and $h$ and fixed $z(t) = t, w(t) = 1$ . . . . .	65
3.5	Convergence of the functional $J$ using S2 for $z(t) = t, \omega(t) = 1$ . . . .	67
3.6	Relative error calculation for fixed $\alpha = 0.9$ and $z(t) = t, \omega(t) = 1$ using S2. . . . .	68
3.7	Ratios of the relative error for fixed $\alpha = 0.9$ and $z(t) = t, \omega(t) = 1$ based on the Table 3.6. . . . .	68
3.9	Convergence of the cost functional $J$ using S3 for $z(t) = t, \omega(t) = 1$ . . . .	68
3.8	CO and MAE for scheme S2 using different value of $\alpha$ and $h$ and fixed $z(t) = t, w(t) = 1$ . . . . .	69
3.10	Relative error calculation for fixed $\alpha = 0.9$ and $z(t) = t, \omega(t) = 1$ using S3. . . . .	69
3.11	Ratios of the relative error for fixed $\alpha = 0.9$ and $z(t) = t, \omega(t) = 1$ based on the Table 3.10. . . . .	69
3.12	CO and MAE for scheme S3 using different value of $\alpha$ and $h$ and fixed $z(t) = t, w(t) = 1$ . . . . .	70
4.1	Convergence of the first (minimum) eigenvalue $\lambda_1$ . . . . .	93
4.2	Absolute error calculation for fixed $\alpha = 1$ from the numerical solutions only. . . . .	94
4.3	Numerical Convergence order (CO) and maximum absolute error (MAE) for the problem. . . . .	94
5.1	Lowest (First) eigenvalues $\lambda^{(1)}$ for fixed $n = 4$ and various $\alpha$ . . . . .	115
