Abstract	v
List of Tables	xiii
List of Figures	xv
1 Introduction	1
1.1 Background and motivation	1
1.1.1 Emergence of Smart Buildings	4
1.1.2 Energy Communities	6
1.1.3 Distribution System Operator	6
1.2 Literature survey	6
1.2.1 Local energy trading: Pool based and Peer-to-Peer based	7
1.2.2 Endogenous classification into seller and buyer	9
1.2.3 Different pricing and incentive schemes for P2P trading	9
1.2.4 Inclusion of network constraints to identify the feasibility of P2P trans- action	10
1.3 Research gap	11
1.4 Objectives and scope of the thesis	14
1.5 Thesis Organization	15
1.6 Summary	15
2 Peer-to-Peer Energy Trading Frameworks and Methodologies: An Overview	17
2.1 Introduction	17
2.2 Types of P2P Energy trading models	17
2.3 Challenges associated with P2P energy trading model	20

2.4	Recent Advancement in P2P energy trading	21
2.5	Game Theory Concepts	23
2.5.1	Cooperative Game	24
2.5.2	Non-Cooperative Game	26
2.5.3	Difference between Cooperative and Non-Cooperative Game	27
2.6	Assumptions for the Game-theoretic models used	28
2.7	Choice of the Game-theoretic models	29
2.8	Alternating direction method of multipliers	31
2.9	Hong's 2m Point Estimation Method (PEM)	35
2.10	Receding Horizon	36
2.11	Thesis Layout based on Energy Trading Models	37
2.12	Summary	38

3 A Cooperative Game Analysis of Peer-to-Peer Energy Transactions: Foundation of Virtual Community 39

3.1	Introduction	39
3.2	System modelling and problem formulation	40
3.3	Methodology	42
3.3.1	Nash bargaining and ADMM	43
3.4	Simulation Results	44
3.5	Summary	51

4 A Non-Cooperative Game Analysis of Peer-to-Peer Energy Transactions Involving Multi-Communities 53

4.1	Introduction	53
4.2	Problem Formulation	54
4.2.1	System Model	54
4.2.2	Cost Model of Buildings	55
4.2.3	Cost Model of Virtual Community	57
4.3	Methodology	59
4.3.1	Scheduling Energy Profiles	59
4.3.2	Distribution of Payments	66
4.4	Simulation Results	73

4.5	Summary	88
5	Network-Constrained Peer-to-Peer Energy Transactions: A Cooperative Game	
	Analysis Framework	91
5.1	Introduction	91
5.2	Problem Formulation	92
5.2.1	System Architecture	92
5.2.2	Problem Formulation: Building Level	94
5.2.3	Problem Formulation: Virtual Community Level	96
5.2.4	Problem Formulation: DSO Level	99
5.3	Methodology	101
5.3.1	Nash Bargaining game formulation	101
5.4	Simulation Results	107
5.5	Summary	118
6	Peer-to-Peer Energy Transactions in Active Distribution Systems: A Kalai-Smorodinsky Bargaining Framework	119
6.1	Introduction	119
6.2	Problem Formulation	120
6.2.1	System Model	120
6.2.2	Building	121
6.2.3	Virtual Community (VC)	123
6.2.4	DGs	125
6.2.5	DSO	126
6.3	Methodology	128
6.3.1	The cooperative game formulation	128
6.3.2	Market Operation	133
6.4	Simulation Results	133
6.5	Summary	147
7	Peer-to-Peer Energy Transactions in Real-Time Scenarios Using the Kalai-Smorodinsky Bargaining Model	149
7.1	Introduction	149

7.2	Energy Trading Without Consideration of Distribution Network Constraints . . .	150
7.2.1	Problem Formulation	150
7.2.2	Methodology	153
7.2.3	Simulation Results	156
7.3	Energy Trading With Consideration of Distribution Network Constraints	164
7.3.1	Problem Formulation	164
7.3.2	Research Methodology	171
7.3.3	Simulation Results	180
7.4	Summary	191
8	Conclusions and Future Scope	193
8.1	Conclusions	193
8.2	Future Scope	196
	Appendix I	199
	Appendix II	205
	Appendix III	209
	List of Publications	223
