

Investigation on RFID Tag Antenna for UHF Band

Thesis submitted in partial fulfilment
for the Award of

Doctor of Philosophy

by

AMIT KUMAR SINGH

DEPARTMENT OF ELECTRONICS ENGINEERING
INDIAN INSTITUTE OF TECHNOLOGY
(BANARAS HINDU UNIVERSITY)
VARANASI – 221 005
INDIA

ROLL NUMBER
18091501

YEAR OF SUBMISSION
2024

CERTIFICATE

It is certified that the work contained in the thesis titled **Investigation on RFID Tag Antenna for UHF Band** by **Amit Kumar Singh** has been carried out under my supervision and that this work has not been submitted elsewhere for a degree.

It is further certified that the student has fulfilled all the requirements of Comprehensive Examination, Candidacy and SOTA for the award of **Doctor of Philosophy**.

Supervisor

Dr. A. K. Singh

Department of Electronics Engineering

Indian Institute Of Technology

(Banaras Hindu University)

Varanasi – 221 005

India

DECLARATION BY THE CANDIDATE

I, **Amit Kumar Singh**, certify that the work embodied in this thesis is my own bona fide work and carried out by me under the supervision of **Dr. A. K. Singh** from 1st January, 2019 to 12th December, 2024, at the **Department of Electronics Engineering**, Indian Institute of Technology (Banaras Hindu University), Varanasi. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, *etc.*, reported in journals, books, magazines, reports dissertations, theses, *etc.*, or available at websites and have not included them in this thesis and have not cited as my own work.

Date: 23/04/2025
Place: Varanasi, India

Signature of the Student

CERTIFICATE BY THE SUPERVISOR

It is certified that the above statement made by the student is correct to the best of my knowledge.

ACKNOWLEDGEMENT

This thesis represents the culmination of years of dedicated work, perseverance, and invaluable support from numerous individuals, without whom this journey would not have been possible. I am deeply grateful to each and every one who contributed to my academic and personal growth.

First and foremost, I extend my profound and heartfelt gratitude to my esteemed supervisor, Dr. A. K. Singh. His insightful guidance, patient mentorship, and unwavering encouragement have been instrumental in the successful completion of this thesis. Dr. Singh's expertise and keen attention to detail have not only enhanced the quality of my research but also molded me into a more capable and disciplined researcher. I am sincerely grateful for the opportunity to learn under his supervision.

I am also indebted to Dr. Sudhir Bhaskar for his technical support throughout this research. His assistance, particularly in the critical technical aspects, provided much-needed clarity and direction. Dr. Bhaskar's timely advice and expertise were invaluable, especially during challenging stages of the project, and his support played a vital role in refining the technical quality of this work.

My deepest appreciation goes to my family, whose unwavering love, patience, and support have been my greatest source of strength. Their belief in my potential, along with their sacrifices and encouragement, has kept me motivated through both triumphs and trials. To my parents, siblings and wife, thank you for your enduring faith and understanding, even when my academic commitments seemed all-consuming. This achievement is as much theirs as it is mine.

I am also grateful to my all hosteler friends, Azharuddin Khan, Amit Kumar, and Rahul Dubey for their companionship and constant support. They have been my sounding boards,

my confidants, and my sources of laughter and relief. Their friendship made this journey more manageable and rewarding, helping me maintain balance and perspective during stressful times. I would like to extend thanks to Mr. Sateesh Kumar Upadhyay for his support during times of need. His timely assistance and encouragement have meant a great deal to me, reinforcing my determination to persevere in challenging moments.

Finally, with deep reverence, I offer my sincerest gratitude to Lord Baba Vishwanath, whose divine blessings have been a guiding light throughout this journey. His grace and strength have given me the courage and conviction to stay true to my goals, and I dedicate this accomplishment to His divine blessings.

To all those mentioned and to many others who contributed in countless ways, I extend my heartfelt thanks. This thesis would not have been possible without your unwavering support and belief in me.

List of Figures

1.1	Different AIDC Techniques	2
1.2	Diagram of RFID system	4
1.3	Thesis outline	11
2.1	RFID system components	16
2.2	Antenna impedance measurement with mirror image method	25
2.3	Measurement schematic setup with differential probe	26
2.4	A differential probe test fixture for impedance measurement	27
3.1	Schematic of the tendered antenna	42
3.2	Transformation steps of proposed antenna, (a) UHF Tag with Nested slot, (b) UHF tag with sigle sided T-match network inside Nested slot, (c) UHF tag with double-sided symmetric T-match network inside Nested slot.	44
3.3	Simulated impedance matching and reflection coefficient of every step. R_a and X_a are resistance and inductive reactance of tag antenna respectively. R_c and $ X_c $ represents resistance and absolute value of capacitive reactance of microchip respectively.	44
3.4	Inductively coupled T-match loop equivalent circuit	46
3.5	(a) Simulated input impedance and (b) Reflection Coefficient for different values of w_t	47
3.6	(a) Simulated input Impedance and (b) Reflection Coefficient for different values of l_t	48

3.7	(a) Simulated input impedance and (b) Reflection Coefficient for different values of w_f	48
3.8	Fabricated prototype of proposed RFID tag antenna	49
3.9	Semi-rigid differential probe used for impedance measurement	49
3.10	Measurement schematic setup with differential probe	50
3.11	Impedance measurement of tag antenna	50
3.12	Measured and simulated input impedance of proposed antenna	50
3.13	Measured and simulated reflection coefficient of RFID tag antenna.	50
3.14	Simulated gain of the tag antenna at the boresight.	51
3.15	Measured Read range obtained of the proposed tag antenna.	51
4.1	Schematic of the proposed antenna	56
4.2	ALLIEN Higgs-4 IC application diagram	57
4.3	Spiral-ending meandered line with Meandered Inductive Coupled loop equivalent circuit	58
4.4	Equivalent circuit prototype of the proposed tag structure	60
4.5	Reflection Coefficient of the UHF RFID tag antenna	61
4.6	Evolution steps of this presented tag	61
4.7	Input Impedances of every steps;(a) Antenna I-Complex Impedance,(b) Antenna II-Complex Impedance,(c) Antenna III-Complex Impedance,(d) Antenna IV-Complex Impedance,(e) Antenna V-Complex Impedance,(f) Antenna VI-Complex Impedance	62
4.8	(a) Simulated input impedance and (b) Reflection Coefficient after variation of h	64
4.9	(a) Simulated input impedance and (b) Reflection Coefficient after variation of d	65
4.10	Fabricated proposed RFID tag antenna with differential-probe	65
4.11	Measurement of UHF Tag	65
4.12	Measured and simulated input impedance of tag antenna	66
4.13	Measured and simulated reflection coefficient of RFID tag	66

4.14	Far-field radiation pattern for E-plane and H-plane at 866 MHz	66
4.15	maximum separation between reader and tag	66
5.1	Tag design and simulated results. (a) Schematics of proposed tag antenna, (b) Impedance variation of proposed tag, (c) Simulated return loss of tag antenna.	73
5.2	(a) Antenna I, (b) Antenna II, (c) Antenna III	75
5.3	(a) Impedance and (b) Return loss obtained at each step	76
5.4	Parametric analysis (a) Input impedance of planar tag antenna after vari- ation in h_t (b) Return loss attained after variation in h_t	77
5.5	Fabricated antenna and Measurement setup with Anritsu VNA	78
5.6	Fabricated tag antenna results. (a) Input impedance of tag antenna (mea- sured and simulated), (b) Return loss of tag antenna (measured and simu- lated).	79
5.7	Simulated realized gain and radiation efficiency of planar tag antenna	80
5.8	Read range of tag antenna (measured and simulated)	81
5.9	Radiation Patterns of tag antenna for E and H plane.	81
6.1	Structure of proposed circular RFID tag antenna. (a)Dimensional geom- etry. (b) 3-D view.	87
6.2	Simulated results of circular antenna (a) Input impedance, (b) Reflection coefficient and Axial ratio, (c) Radiation pattern for xz-plane, (d) Radia- tion pattern for yz-plane	88
6.3	surface current density of circular tag antenna at 915 MHz at different phases. (a) $\omega t = 0^\circ$, (b) $\omega t = 90^\circ$, (c) $\omega t = 180^\circ$, (d) $\omega t = 270^\circ$	89
6.4	Circuit representation of proposed Circular RFID tag antenna. (a)General circuit version. (b) Equivalent circuit diagram.	90
6.5	Evolution steps (a) pair of slot and patch with equal area,(b) V-shaped slot,(c) L-shaped patch,(d) shorting pin in L-patch.	91

6.6	Simulated results of Circular tag antennas: (a) Input impedance variation, (b) Reflection Coefficient and axial ratio.	93
6.7	Self resonating frequency of circular tag with different amount of pair of via.	94
6.8	Effect of distance between L-bars in circular tag.	94
6.9	Effect of gap between V-slots in circular tag.	95
6.10	Effect of shorting pin position on axial ratio.	96
6.11	circular tag antenna measurement setup (a) without metal plate and (b) with metal plate.	96
6.12	Simulated and measured impedance of circular tag antenna in UHF RFID band.	97
6.13	Reflection coefficient of circular tag antenna with and without metal plate.	98
6.14	Maximum detection range of proposed circular tag CP antenna.	98
