1 INTRODUCTION AND LITERATURE REVIEW	1
1.1 Mathematical Modeling and its Applications	1
1.2 Classical Fourier’s Law of Heat Conduction and its Drawback	3
1.3 Modified Fourier’s Law of Heat Conduction	5
1.3.1 Cattaneo-Vernotte (CV) Law of Heat Conduction	5
1.3.2 Dual-Phase-Lag (DPL) Law of Heat Conduction	6
1.4 Bio-Heat Transfer Models	7
1.5 Thermoelasticity: Definition and Applications	8
1.5.1 Classical Coupled Theory of Thermoelasticity and its Limitations	9
1.5.2 Generalized Thermoelasticity	12

1.5.2.1	Lord-Shulman (LS) thermoelasticity theory	13
1.5.2.2	Green-Lindsay (GL) thermoelasticity theory	13
1.5.2.3	Green-Naghdi (GN) thermoelasticity theory	14
1.5.2.4	Dual-Phase-Lag (DPL) thermoelasticity theory	15
1.5.2.5	Three-Phase-Lag (TPL) thermoelasticity theory	15
1.5.2.6	Moore-Gibson-Thompson (MGT) thermoelasticity theory	16
1.6	Two-Temperature Thermoelasticity	16
1.7	Porosity Thermoelasticity	18
1.8	Other Extended Thermoelasticity Theories	19
1.9	Literature Review	20
1.10	Objective of the Thesis	33
2	ON MGT THERMOELASTICITY: DOMAIN OF INFLUENCE RESULTS	35
2.1	A Domain of Influence Theorem under MGT Thermoelasticity Theory .	35
2.1.1	Introduction ¹	35
2.1.2	Basic Equations and Problem Formulation	37
2.1.3	Main Results	39
2.1.4	Conclusion	48
2.2	A Domain of Influence Theorem for a Natural Stress-Heat-Flux Problem in the Moore-Gibson-Thompson Thermoelasticity Theory	50
2.2.1	Introduction ²	50
2.2.2	Basic Equations and Problem Formulation	50
2.2.3	Some Definitions	53
2.2.4	Main Results	54
2.2.5	Conclusion	63
3	SOME INVESTIGATIONS ON MOORE-GIBSON-THOMPSON THERMOELASTICITY THEORY	65
3.1	On Propagation of Harmonic Plane Waves under the Moore-Gibson-Thompson Thermoelasticity Theory	65
3.1.1	Introduction ³	65
3.1.2	Basic Equations and Problem Formulation	67
3.1.3	Harmonic Plane Waves	69
3.1.3.1	Dispersion relation and its derivation	70
3.1.3.2	Expressions for attenuation coefficient and wave number	72
3.1.4	Analytical Results	73

3.1.4.1	High-frequency asymptotic expressions	74
3.1.4.2	Low-frequency asymptotic expressions	75
3.1.5	Asymptotic Results for Different Wave Fields	77
3.1.5.1	Phase velocity	77
3.1.5.2	Specific loss	78
3.1.5.3	Penetration depth	79
3.1.6	Stability Analysis	79
3.1.6.1	Stability analysis of plane waves in the MGT model . .	80
3.1.7	Numerical Results and Discussion	82
3.1.7.1	Phase velocity	83
3.1.7.2	Specific loss	86
3.1.7.3	Penetration depth	89
3.1.8	Conclusion	91
3.2	Legendre Wavelet Collocation Method for Investigating Thermo-Mechanical Responses on Biological Tissue During Laser Irradiation	95
3.2.1	Introduction ⁴	95
3.2.2	Basic Governing Equations	96
3.2.3	Problem Formulation	99
3.2.3.1	Boundary and initial conditions	100
3.2.4	Variable Thermal Conductivity	101
3.2.5	Legendre Wavelets	105
3.2.5.1	Function approximation	105
3.2.5.2	Convergence of Legendre wavelets	106
3.2.6	Solution Method	106
3.2.6.1	Time discretization	107
3.2.6.2	Space discretization by Legendre wavelets	109
3.2.7	Numerical Results	112
3.2.7.1	Convergence and validation of the present numerical scheme	113
3.2.7.2	Influence of variable thermal conductivity	115
3.2.7.3	Influence of thermal relaxation parameters	117
3.2.7.4	Responses at different instants of time	119
3.2.7.5	Comparison between different models	121
3.2.8	Conclusion	123

4	ON TEMPERATURE-RATE DEPENDENT TWO-TEMPERATURE THERMOELASTICITY	127
4.1	Variational and Reciprocal Principles on the Temperature-Rate Dependent Two-Temperature Thermoelasticity Theory	127
4.1.1	Introduction ⁵	127
4.1.2	Basic Equations and Problem Formulation	130
4.1.3	Alternative Formulation	133
4.1.4	Variational Theorem	135
4.1.5	Reciprocity Theorem	138
4.1.6	Conclusion	141
4.2	Thermoelastic Interactions on Temperature-Rate Dependent Two-Temperature Thermoelasticity in an Infinite Medium Subjected to a Line Heat Source	143
4.2.1	Introduction ⁶	143
4.2.2	The Mathematical Model	144
4.2.3	Formulation of the Problem	145
4.2.4	The Governing Equations in the Laplace Transform Domain . .	147
4.2.5	Short-Time Approximation	150
4.2.6	Analytical Results	153
4.2.7	Analysis of the Analytical Results	156
4.2.8	Numerical Results and Discussion	157
4.2.9	Conclusion	163
5	ON GENERALIZED PORO-THERMOELASTICITY THEORY	165
5.1	Variational Principle and Continuous Dependence Results on the Generalized Poro-Thermoelasticity Theory with One Relaxation Parameter	165
5.1.1	Introduction ⁷	165
5.1.2	Basic Equations and Problem Formulation	167
5.1.3	Alternative Formulation	172
5.1.4	Variational Theorem	174
5.1.5	Continuous Dependence Result	178
5.1.6	Conclusion	186
5.2	Application of Legendre Wavelet Collocation Method to the Analysis of Poro-Thermoelastic Coupling with Variable Thermal Conductivity . .	187
5.2.1	Introduction ⁸	187
5.2.2	Basic Equations	188
5.2.2.1	Problem formulation: Application to a problem of layer	192

5.2.2.2	Initial and boundary conditions	193
5.2.3	Solution Method	194
5.2.3.1	Time discretization	195
5.2.3.2	Space discretization by Legendre wavelets	197
5.2.4	Numerical Results	200
5.2.4.1	Verification of numerical results	202
5.2.4.2	Effect of temperature-dependent thermal conductivity	202
5.2.4.3	Effect of porosity	204
5.2.4.4	Effect of thermal relaxation parameters	205
5.2.5	Conclusion	207

DECLARATION BY THE CANDIDATE

I, **KOMAL JANGID**, certify that the work embodied in this thesis is my own bonafide work and carried out by me under the supervision of **Prof. SANTWANA MUKHOPADHYAY** from January, 2019 to September, 2023 at the **Department of Mathematical Sciences, Indian Institute of Technology (Banaras Hindu University), Varanasi**. The matter embodied in this thesis has not been submitted for the award of any other degree/diploma. I declare that I have faithfully acknowledged and given credits to the research workers wherever their works have been cited in my work in this thesis. I further declare that I have not willfully copied any other's work, paragraphs, text, data, results, etc., reported in journals, books, magazines, reports dissertations, theses, etc., or available at websites and have not included them in this thesis and have not cited as my own work.

Date: 29/9/2023
Place: Varanasi

Komal
(KOMAL JANGID)

CERTIFICATE BY THE SUPERVISOR

It is certified that the above statement made by the student is correct to the best of my/our knowledge.

S. Mukhopadhyay 29/9/2023

Note: However, the author may reproduce or authorize others to reproduce material extracted verbatim from the thesis or derivative of the thesis for author's personal use provided that the source and the Institute's copyright notice are indicated.

Dedicated
to
My Parents

ACKNOWLEDGMENTS

Acknowledgments

First and foremost, I am thankful to Almighty God for giving me the strength, knowledge, ability, and opportunity to undertake this study and complete it satisfactorily.

*There are no proper words to convey my deep gratitude and respect for my supervisor, **Dr. Santwana Mukhopadhyay, Professor**, Department of Mathematical Sciences, IIT (BHU), Varanasi for her invaluable guidance, continuous support, and encouragement, during my PhD study. Her immense knowledge and plentiful experience have encouraged me in all the time of my academic research. I never hesitated to ask her questions and her help was beyond my expectation. She has always shared her in-depth knowledge which enabled me to become a better researcher. I could not have imagined having a better supervisor for my PhD study than her.*

*My gratitude extends to the present Head of Department, **Dr. S. K. Pandey (Professor)** and the former Head of Department, **Dr. T. Som (Professor)**, for their support during my research work. I would like to express my deep regards to all the faculty members of the department for their timely suggestions and inspirations. I present my special thanks to my RPEC members, **Dr. Subir Das, Professor**, Department of Mathematical Sciences and **Dr. Pabitra Ranjan Maiti, Associate Professor**, Department of Civil Engineering for their persistent moral support and insightful suggestions.*

*I thankfully acknowledge the support and inspiration that I received from my seniors, **Dr. Om Namha Shivay, Dr. Manushi Gupta, Dr. Harendra Kumar**, and **Mr. Robin Vikram Singh**. I also must mention the never ending support and honest opinions that I received from **Dr. Bhagwan Singh**, which gave me strength of all kinds to achieve my goals. I also take this opportunity to thank my fellow labmates, **Mr. Md Arzoo Jamal, Mr. Arnab Mapui, Ms. Anjali Srivastava**, and **Ms. Sunayani Mondal** for helping me out in all aspects throughout my research period. I would further like to give a special thanks to my close friends, **Mrs. Nikki Kedia, Mrs. Farheen Sultana, Ms. Poonam Yadav**, and **Ms. Pooja Rani** for a cherished time spent together and the fun we had in Varanasi. Many thanks also to my colleagues and all the research scholars of the department for maintaining friendly and positive work environment.*

My sincere thanks also goes to my institute, Indian Institute of Technology (BHU), Varanasi, for providing necessary resources throughout my research. Also, I am thankful to all non-teaching staff members for their support.

*I gratefully acknowledge the **Council of Scientific and Industrial Research (CSIR)**, India for full financial support as Junior Research Fellowship and Senior Research Fellowship during my research.*

*I am deeply grateful to my parents, **Mr. Girraj Prasad** and **Mrs. Anjana Devi** for their unconditional support, appreciation, encouragement, and keen interest in my academic achievements. Special thanks to my brother **Mr. Rupam Jangid** and my sister **Ms. Kanchan Jangid** for playing an important role in my life and enlightening me the first glimpse of research.*

Finally, my thanks go to all the people who contributed their valuable assistance in the completion of the research work directly or indirectly. It is a pleasure to thank those who made it a possibility.

KOMAL JANGID

LIST OF FIGURES

1.1.1	Flowchart of the process of mathematical modeling	2
3.1.1	(a) Variation of phase velocity for elastic mode wave with low frequency. (b) Variation of phase velocity for elastic mode wave with high frequency.	84
3.1.2	(a) Variation of phase velocity for thermal mode wave with low frequency. (b) Variation of phase velocity for thermal mode wave with high frequency.	86
3.1.3	(a) Variation of specific loss for elastic mode wave with low frequency. (b,c) Variation of specific loss for elastic mode wave with high frequency. .	86
3.1.4	(a) Variation of specific loss for thermal mode wave with low frequency. (b) Variation of specific loss for thermal mode wave with high frequency. .	87
3.1.5	(a) Variation of penetration depth for elastic mode wave with low frequency. (b) Variation of penetration depth for elastic mode wave with high frequency.	89
3.1.6	(a) Variation of penetration depth for thermal mode wave with low frequency. (b) Variation of penetration depth for thermal mode wave with high frequency.	90
3.2.1	A tumor-normal tissue model subjected to laser irradiation.	99
3.2.2	Comparison of temperature distribution obtained from different methods.	115
3.2.3	Influence of variable thermal conductivity on displacement distribution at $t = 0.1$	116
3.2.4	Influence of variable thermal conductivity on temperature distribution at $t = 0.1$	116
3.2.5	Influence of variable thermal conductivity on stress distribution at $t = 0.1$.	117
3.2.6	Influence of thermal relaxation parameters on displacement distribution at $t = 0.1$ and $\chi_1 = \chi_2 = -0.3$	118
3.2.7	Influence of thermal relaxation parameters on temperature distribution at $t = 0.1$ and $\chi_1 = \chi_2 = -0.3$	118
3.2.8	Influence of thermal relaxation parameters on stress distribution at $t = 0.1$ and $\chi_1 = \chi_2 = -0.3$	119
3.2.9	Displacement distribution at different instants for $\chi_1 = \chi_2 = -0.3$	120
3.2.10	Temperature distribution at different instants for $\chi_1 = \chi_2 = -0.3$	120

3.2.11	Stress distribution at different instants for $\chi_1 = \chi_2 = -0.3$	121
3.2.12	Displacement distribution for different models at $\chi_1 = \chi_2 = -0.3$ and $t = 0.1$	122
3.2.13	Temperature distribution for different models at $\chi_1 = \chi_2 = -0.3$ and $t = 0.1$	122
3.2.14	Stress distribution for different models at $\chi_1 = \chi_2 = -0.3$ and $t = 0.1$. . .	123
4.2.1	(a) Variation of u along r at $t = 0.4$. (b) Variation of u along r at $a_3 = 0.6$.	158
4.2.2	(a) Variation of ϕ along r at $t = 0.4$. (b) Variation of ϕ along r at $a_3 = 0.6$.	159
4.2.3	(a) Variation of θ along r at $t = 0.4$. (b) Variation of θ along r at $a_3 = 0.6$.	160
4.2.4	(a) Variation of σ_{rr} along r at $t = 0.4$. (b) Variation of σ_{rr} along r at $a_3 = 0.6$	161
4.2.5	(a) Variation of $\sigma_{\varphi\varphi}$ along r at $t = 0.4$. (b) Variation of $\sigma_{\varphi\varphi}$ along r at $a_3 = 0.6$	162
5.2.1	Model of a fluid-saturated porous layer.	192
5.2.2	(a) Displacement distribution due to solid phase at $t = 0.1$ and $\beta = 0.26$. (b) Displacement distribution due to fluid phase at $t = 0.1$ and $\beta = 0.26$. .	202
5.2.3	(a) Temperature distribution due to solid phase at $t = 0.1$ and $\beta = 0.26$. (b) Temperature distribution due to fluid phase at $t = 0.1$ and $\beta = 0.26$. .	203
5.2.4	(a) Stress distribution due to solid phase at $t = 0.1$ and $\beta = 0.26$. (b) Stress distribution due to solid phase at $t = 0.1$ and $\beta = 0.26$	203
5.2.5	(a) Displacement distribution due to solid phase at $t = 0.1$ and $K_1 = -0.25$. (b) Displacement distribution due to fluid phase at $t = 0.1$ and $K_1 = -0.25$	204
5.2.6	(a) Temperature distribution due to solid phase at $t = 0.1$ and $K_1 = -0.25$. (b) Temperature distribution due to fluid phase at $t = 0.1$ and $K_1 = -0.25$.	204
5.2.7	(a) Stress distribution due to solid phase at $t = 0.1$ and $K_1 = -0.25$. (b) Stress distribution due to solid phase at $t = 0.1$ and $K_1 = -0.25$	205
5.2.8	(a) Displacement distribution due to solid phase for different models. (b) Displacement distribution due to fluid phase for different models.	206
5.2.9	(a) Temperature distribution due to solid phase for different models. (b) Temperature distribution due to fluid phase for different models.	207
5.2.10	(a) Stress distribution due to solid phase for different models. (b) Stress distribution due to solid phase for different models.	207

LIST OF SYMBOLS

σ_{ij}	Stress tensor for the solid phase, Pa or N m^{-2} or $\text{kg m}^{-1}\text{s}^{-2}$
σ	Stress tensor for the fluid phase, Pa or N m^{-2} or $\text{kg m}^{-1}\text{s}^{-2}$
u_i	Displacement vector for the solid phase, m
U_i	Displacement vector for the fluid phase, m
e_{ij}	Strain tensor for the solid phase, dimensionless
ϵ	Strain tensor for the fluid phase, dimensionless
q_i	Heat-flux, W m^{-2}
T_0	Uniform reference temperature, K
θ	Thermodynamic temperature/Temperature variation from the uniform reference temperature, K
ϕ	Conductive temperature, K
ν	Thermal displacement, K s
F_i	Body force per unit mass, N kg^{-1}
H	Heat source per unit mass, $\text{J s}^{-1} \text{kg}^{-1}$ or $\text{N m s}^{-1} \text{kg}^{-1}$
S	Entropy per unit mass, $\text{J K}^{-1} \text{kg}^{-1}$

ρ^s	$\rho^s = (1 - \beta)\rho^{s*}$, density of the solid phase per unit volume of bulk, kg m^{-3}
ρ^f	$\rho^f = \beta\rho^{f*}$, density of the fluid phase per unit volume of bulk, kg m^{-3}
ρ^{s*}, ρ^{f*}	Density of the solid and fluid phases, kg m^{-3}
ρ	$\rho = \rho^s + \rho^f$, density of the material, kg m^{-3}
K_{ij} / K	Thermal conductivity tensor/ Thermal conductivity constant, $\text{W m}^{-1} \text{K}^{-1}$
K_{ij}^* / K^*	Thermal conductivity rate tensor/ Thermal conductivity rate constant, $\text{W m}^{-1} \text{K}^{-1} \text{s}^{-1}$
C_{ijkl}	Elasticity tensor, $\text{kg m}^{-1}\text{s}^{-2}$
λ, μ	Lame's constants of material, $\text{kg m}^{-1}\text{s}^{-2}$
γ_{ij}	Thermoelasticity tensor, $\text{kg m}^{-1} \text{s}^{-2} \text{K}^{-1}$
$\gamma = (3\lambda + 2\mu)\alpha_t$	Thermoelasticity constant, $\text{kg m}^{-1} \text{s}^{-2} \text{K}^{-1}$
α_t	Linear thermal expansion of the material, K^{-1}
β	Porosity, dimensionless
C_E	Specific heat at constant strain, $\text{J kg}^{-1} \text{K}^{-1}$
τ_q	Phase-lag of heat-flux vector, s
τ_1, τ_2	Thermal relaxation parameters, s
∇	Gradient operator
∇^2	Laplacian operator
δ_{ij}	Kronecker delta, dimensionless

$\mathbf{x} = (x_1, x_2, x_3)/(x, y, z)$	Cartesian coordinates, m
t	Physical time, s

Note: Throughout the thesis, the subscripted comma notations are used to denote the partial derivatives with respect to the space variables. The over-headed dots denote partial derivatives with respect to time variable, t . Subscripts i, j, k, l take the values 1, 2, 3 and summation is implied by index repetition. Moreover, the superscripted s is used to denote the solid phase, f is used to denote the fluid phase, sf and fs are used to represent the couplings between the solid and fluid phases of the physical quantities.
