Acknowledgments	vii
Preface	xv
Chapter 1. Introduction	1
1. General Introduction	2
1.1. Introduction to Biosensors	3
1.2. Classification of Biosensors	4
1.2.1. Based on application of external labels	4
1.2.2. Based on type of transducer used	5
1.3. Role of nanomaterials in the development of biosensors	8
2. Introduction to MOFs	9
2.1. Properties of MOFs	12
2.1.1. Mechanical properties	12
2.1.2. Optical properties	13
2.1.3. Electronic properties	14
2.1.4. Catalytic properties	15
2.2. General methods of MOF synthesis	15
2.2.1. Solvothermal MOF synthesis	16
2.2.2. Electrochemical MOF synthesis	17
2.2.3. Microwave-assisted (MW) and ultra-sonochemical (US) MOF synthesis	18
2.2.4. Mechanochemical MOF synthesis	20
2.2.5. Dry-gel conversion (DGC) MOF synthesis	21
2.2.6. Diffusion-based MOF synthesis	21
2.2.7. Ionothermal MOF synthesis	22
3. Application of Biosensors in Molecular Sensing and Disease Diagnosis	24
3.1. Detection of Clinically significant molecules using MOF-based Sensors	24
3.1.1. Free Radicals and Metal Ions	24

3.1.1.1. MOF-based electrochemical sensors for free radical and metal ion detection	24
3.1.1.2. MOF-based optical sensors for free radical and metal ion detection	26
3.1.2. Small molecules	32
3.1.2.1. MOF-based electrochemical sensors for small molecule detection	32
3.1.2.2. MOF-based optical sensors for small molecule detection	33
3.1.3. Macromolecules	42
3.1.3.1. MOF-based electrochemical sensors for macromolecules' detection	42
3.1.3.2. MOF-based optical sensors for macromolecules' detection	44
3.1.4. In vitro cell detection	54
3.1.4.1. MOF-based electrochemical sensors for prokaryotic cell detection	54
3.1.4.2. MOF-based electrochemical sensors for eukaryotic cell detection	56
3.2. Electrochemical MOF-based Biosensing matrices for Disease Diagnosis	62
3.2.1. MOF-based electrochemical sensors for Diabetes	65
3.2.2. MOF-based electrochemical sensors for Virus and bacteria-borne infectious diseases	70
3.2.2.1. Viral diseases	70
3.2.2.2. Bacterial sepsis	72
3.2.3. MOF-based electrochemical sensors for Neurological disorders	81
3.2.4. MOF-based electrochemical sensors for Cardio-vascular diseases	86
3.2.5. MOF-based electrochemical sensors for Cancer	90
References	96
Chapter 2. Electrochemical Assembly of Nickel MOF Decorated Au Dendrites as Peroxidase Mimic for High Performance Hydrogen Peroxide Sensing	139
1. Introduction	140
2. Materials and Methods	144

2.1. Chemicals and Instruments	144
2.2. Preparation of GCE/AuND/Ni-MOF/Hyd sensing probe	144
2.3. Electrochemical characterizations of the GCE/AuND/Ni-MOF/Hyd nanohybrid sensing probe	145
2.4. Real Sample Analysis	146
3. Results and Discussion	146
3.1. Electrochemical nanoimprinting and characterization of 3D AuND/Ni-MOF/Hyd nanohybrid sensing probe	146
3.1.1. SPM studies	147
3.1.2. Physical characterization of sensing probe/ probe materials	149
3.1.3. XPS analysis	153
3.1.4. Validation of Au, Ni, and hydrazine presence at the electrode surface	156
3.1.5. Electrochemical characterization of GCE/AuND/Ni-MOF/Hyd sensing probe	158
3.2. Analytical performance of GCE/AuND/Ni-MOF/Hyd nanohybrid sensing probe	162
3.3. Selectivity assay	170
3.4. Real sample analysis	171
3.5. Reproducibility and stability assay	172
4. Conclusion	174
References	175
Chapter 3. Pristine NiMOF sandwiched between 1D and 3D engineered Au-particles and dendritic platform for ultra-swift folic acid sensing in cellular microenvironment	181
1. Introduction	182
2. Materials and Methods	186
2.1. Chemicals and Instruments	186
2.2. GCE/AuNP/NiMOF/AuND sensor probe fabrication	187
2.3. Electrochemical characterization of GCE/AuNP/NiMOF/AuND sensor probe	188
2.4. Real Sample Analysis	188
2.4.1. Sensor Validation in Serum samples	188
2.4.2. In vitro sensing and real-time FA uptake in cellular microenvironment	189
3. Results and Discussion	189

3.1. Electrochemical surface engineering and characterization of GCE/AuNP/Ni MOF/AuND sensor probe	189
Physical Characterizations	190
3.1.1. SPM analysis	190
3.1.2. SEM and EDX analysis	192
3.1.3. FTIR analysis for NiMOF	194
3.1.4. Catalytic metal elemental validation on the GCE/AuNP/NiMOF/AuND probe surface	196
3.2. Electrochemical performance of GCE/AuNP/NiMOF/AuND sensor probe	197
3.3. Analytical performance of GCE/AuNP/NiMOF/AuND sensor probe	201
3.3.1. Control Studies	201
3.3.2. Sensor Analytics	205
3.3.3. Response time study	206
3.3.4. Selectivity and reproducibility assay	210
3.3.5. Real sample analysis	212
3.3.5.1. Serum-sample based study	212
3.3.5.2. In vitro sensing module using MCF-7 cell lines and its validation through fluorescence imaging	214
4. Conclusion	216
References	218
Chapter 4. Ni/Co stacked MOFs as a nano-electronic transducer integrated with smartphone for nitrite sensing in environmental water samples	223
1. Introduction	224
2. Materials and Methods	226
2.1. Chemicals and Instruments	226
2.2. Preparation of GCE/NiMOF/CoMOF/AuNP sensing platform	227
2.3. Electrochemical evaluation of the GCE/NiMOF/CoMOF/AuNP nanohybrid sensing probe	228
3. Results and Discussion	229
3.1. The deposition of the stacked MOF over the electrode surface, followed by AuNP functionalization	229
3.2. Physical Characterization of the developed 3D stacked MOF sensing probe	233
3.2.1. SEM and EDX Analysis	233

3.2.2. XPS analysis	236
3.3. Electrochemical characterization	238
3.3.1. Catalytic metal elemental validation on the GCE/Ni-MOF/Co-MOF/AuNP sensor probe	238
3.3.2. Electrochemical performance of the stacked MOFs in the sensor probe	241
3.4. Analytical Feasibility of the Developed Surface	244
3.5. Response Time Analysis for the GCE/Ni-MOF/Co-MOF/AuNP Sensor	248
3.6. Selectivity, Reproducibility, and Stability of the GCE/Ni-MOF/Co-MOF/AuNP Sensor Probe	249
3.7. Real Sample Analysis	251
3.8. Integration of Sensor with a Smartphone Interface for Field Deployment	252
4. Conclusion	254
References	255
Chapter Appendix	261
Chapter 5. Engineering Cobalt/Molybdenum Bimetallic MOF for Ultra-swift Detection of Uric Acid	265
1. Introduction	266
2. Materials and Methods	267
2.1. Chemicals and Instruments	267
2.2. Electrochemical Sensor Probe Characterization and Analytics	268
2.3. Preparation and preliminary physical characterization of the Co/Mo MOF probe	268
2.4. Physical and electrochemical characterization of the nanoengineered Co/Mo MOF sensing probe	269
2.5. Real Sample Analysis	269
3. Results and Discussion	269
3.1. Electrochemical nanoengineering and characterization of the GCE/Co/ sensing probe	269
3.1.1. SEM and FTIR studies	270
3.1.2. Electrochemical characterization of GCE/ Co/Mo MOF sensing probe	270
3.2. Analytical performance of GCE/ Co/Mo MOF sensing probe	272
3.3. Selectivity assay	276

4. Conclusion	278
References	280
Chapter 6. Overall Conclusion and Future Prospects	283
1. Major shortcomings of MOFs in sensor development	284
2. Conclusions and Future Prospects	286
References	291
Annexures	293
Annexure 1: List of publications and patents from thesis and associated works	294
Annexure 2: Conference presentations	303
Biography of the Author	308
