
Table of Contents

List of Tables	xv
List of Figures	xvii
List of Symbol/Abbreviations.....	xxiii
Abstract.....	xxvii
Chapter 1 Introduction	1
1.1. Tribology.....	1
1.1.1. Friction.....	2
1.1.2. Wear.....	3
1.1.3. Lubrication.....	3
1.2. Classification of liquid lubricants.....	4
1.3. Benefits of vegetable-based lube oils	6
1.4. Role of additives	7
1.5. Nanomaterials as an additive	9
Chapter 2 Literature Review.....	13
2.1. Background.....	13
2.2. Base Oils.....	15
2.2.1. Mineral base oil.....	15
2.2.2. Synthetic base oils.....	15
2.2.3. Animal fats-based bio lubricants	16
2.2.4. Vegetable-based lubricants	16

2.3. Hybrid nanolubricants.....	18
2.3.1. Simple mixed hybrid.....	19
2.3.2. Compound hybrid	20
2.4. Influence of nanoparticles parameters on tribological performance.....	28
2.4.1. Influence of nanoparticle size	28
2.4.2. Influence of nanoparticles concentration	29
2.4.3. Influence of nanoparticles morphology	30
2.5. Mechanisms of tribological enhancement	31
2.6. Limitations	33
2.7. Literature gap	34
2.8. Motivation.....	37
2.9. Problem identification.....	37
2.10. Objectives	38
Chapter 3 Materials and experimental methodology	41
3.1. Materials and synthesis	41
3.1.1. Base oil.....	41
3.1.2. Purification and chemical modification of Karanja oil.....	42
3.1.3. Nano additives synthesis.....	44
3.2. Characterization of nanoparticles	52
3.2.1. SEM-EDS analyses.....	52
3.2.2. TEM	52

3.2.3. X-ray diffraction	52
3.2.4. Fourier transformed infrared spectroscopy	53
3.3. Nano lubricant formulation and testing	53
3.3.1. Stirring and ultrasonic mixing	53
3.3.2. Rheological studies	53
3.3.3. Film thickness calculation.....	54
3.3.4. Tribological studies.....	55
3.3.5. Sliding reciprocating test	58
3.4. Friction induced vibration analysis	58
3.4.1. Analysis of nano-lubricant failure using vibration characteristics	58
3.4.2. Experimental setup and measurement methodology	59
3.4.3. Signal acquisition and processing	60
3.4.4. Spectral analysis using time-frequency representation.....	61
3.5. Worn surface analysis	62
3.5.1. Scanning electron microscopy	62
3.5.2. X-ray photoelectron spectroscopy	63
3.5.3. Profilometry (optical 3D/ Line 2D/ AFM).....	64
3.6. Wear debris analysis	64
Chapter 4 : Effects of spherical hybrid silica-molybdenum disulphide on the lubrication	65
4.1. Characterization of nanoparticles	65
4.1.1. X-ray diffraction results of particles	65

4.1.2. Morphological characterization of particles	67
4.2. Formulation stability	71
4.3. Tribological evaluation	73
4.4. Worn surface analysis	77
4.4.1. SEM images of worn surface	77
4.4.2. Atomic force micrographs (AFM) of different worn surfaces.....	79
4.4.3. XPS analysis of worn surface	83
4.5. Wear debris analysis	85
4.5.1. XRD analysis of debris particles.....	85
4.5.2. SEM analysis of wear debris.....	86
4.6. Lubrication mechanism.....	89
4.7. Chapter summary	91
Chapter 5 Graphene-zinc oxide hybrid nanolubricants under various test conditions	93
5.1. Characterization of particles	94
5.1.1. XRD analysis	94
5.1.2. FTIR results of hybrid nano additives	95
5.1.3. Raman spectroscopic results of AZnOGO hybrid	97
5.1.4. Morphological studies.....	98
5.2. Dispersion stability of lubricants	99
5.3. Thermophysical properties of lubricants	100
5.4. Tribological investigation of nano lubricants	101

5.5. Worn surface analysis of lubricants	102
5.6. Worn surface profile	104
5.7. Statistical analysis.....	106
5.7.1. Response surface methodology (RSM)	106
5.7.2. Individual factors	113
5.7.3. Interaction effects between factors	114
5.7.4. Load-speed interaction.....	114
5.7.5. Load-temperature interaction.....	116
5.7.6. Concentration-temperature interaction	117
5.7.7. Concentration-speed interaction	117
5.7.8. Concentration-load interaction.....	120
5.7.9. Temperature-speed interaction.....	121
5.8. Mechanism of lubrication	123
5.9. Chapter summary	124
Chapter 6 Chemically-functionalized $Ti_3C_2T_x$ MXene for tribo-performance enhancement of castor oil	125
6.1. Characterization of materials	125
6.1.1. XRD studies	125
6.1.2. FTIR studies.....	126
6.1.3. Raman studies	127
6.1.4. Morphology of particles.....	129

6.2. Dispersion stability	130
6.3. Tribological tests of lubricant	131
6.4. Worn surface analysis	134
6.4.1. SEM and EDS	134
6.5. Roughness data analysis	136
6.6. Chapter summary	139
Chapter 7 Friction, wear, and failure performance enhancement of Karanja oil by chemically-functionalized hexagonal boron nitride.....	141
7.1. Oil characterization	141
7.1.1. FTIR of modified oil.....	141
7.1.2. ¹ H NMR of oil	142
7.2. Characterization of nanoparticles	143
7.2.1. X-ray diffraction results of particles	143
7.2.2. Raman characteristics of h-BN and fh-BN	145
7.2.3. FTIR of hybrid additives.....	146
7.2.4. Dispersion of nanoparticles.....	147
7.2.5. Morphological studies.....	148
7.3. Base oil blends and their rheology.....	149
7.4. Tribological study	153
7.4.1. Fully flooded condition.....	153
7.4.2. Starved lubrication	155

7.5. Worn surface study	157
7.6. Friction induced vibration at failure	158
7.7. Chapter summary	164
Chapter 8 : Conclusion and future scope	167
8.1. Major conclusion	167
8.2. Future directions	173
