| 1.1 Contribution of the Research                                      | 14           |
| 1.11 Chapter-wise summary                                             | 16           |
| <b>Chapter 2</b>                                                      | <b>18</b>    |
| 2.1 Maritime freight enterprises                                      | 18           |
| 2.2 Digital technologies in Maritime Freight                          | 20           |
| 2.2.1 Blockchain Technology                                           | 22           |
| 2.2.2 Internet of Things (IoT)                                        | 24           |
| 2.2.3 Bigdata & Artificial Intelligence                               | 28           |
| 2.3 Multi-Criteria Decision-Making (MCDM) Methods in Maritime Freight | 35           |
| 2.3.1 Grey-DANP method                                                | 35           |

|                                                                                                         |           |
|---------------------------------------------------------------------------------------------------------|-----------|
| 2.3.2 Fuzzy-AHP & PROMETHEE II                                                                          | 37        |
| 2.3.3 Fuzzy-AHP & Fuzzy TOPSIS                                                                          | 38        |
| 2.4 Previous works related to the prediction of CO <sub>2</sub> emissions from Maritime Freight         | 39        |
| 2.5 Previous works related to the Mathematical Modelling                                                | 42        |
| 2.5.1 Previous studies related to Berth Allocation Problem (BAP) & Quay crane assignment problem (QCAP) | 42        |
| 2.5.2 Studies on solution approach of BAP & QCAP                                                        | 44        |
| 2.6 Research Gaps                                                                                       | 46        |
| <b>Chapter 3</b>                                                                                        | <b>48</b> |
| 3.1 Research Framework                                                                                  | 48        |
| 3.2 Research Design                                                                                     | 49        |
| 3.3 Descriptive Analysis                                                                                | 50        |
| 3.3.1 Integrated Grey-DEMATEL & ANP (Grey-DANP)                                                         | 50        |
| 3.3.2 Integrated F-AHP & PROMETHEE II                                                                   | 55        |
| 3.3.3 Integrated Fuzzy AHP and Fuzzy-TOPSIS                                                             | 60        |
| 3.3.4 Integrated SEM-ANN Approach                                                                       | 62        |
| 3.4 Predictive Analysis                                                                                 | 63        |
| 3.4.1 Support vector Machine                                                                            | 64        |
| 3.4.2 Decision Tree                                                                                     | 64        |
| 3.4.3 Random Forest                                                                                     | 65        |
| 3.4.4 Artificial Neural Networks (ANN):                                                                 | 66        |
| 3.5 Prescriptive Analysis                                                                               | 67        |
| 3.5.1 Gurobi                                                                                            | 67        |
| 3.5.2 Elite Genetic Algorithm                                                                           | 68        |
| <b>Chapter 4</b>                                                                                        | <b>73</b> |
| 4.1 Key determinants of Blockchain adoption and their impact on sustainability                          | 73        |
| 4.1.1 Factors influencing Blockchain technology adoption                                                | 75        |
| 4.1.2 Methodology                                                                                       | 78        |
| 4.1.3 Data analysis and results                                                                         | 82        |
| 4.1.4 Discussion                                                                                        | 90        |
| 4.2 Interrelationships among the determinants influencing Blockchain adoption                           | 93        |

|                                                                             |            |
|-----------------------------------------------------------------------------|------------|
| 4.2.1 Technology-organization-environment (TOE) framework                   | 94         |
| 4.2.2 Empirical study                                                       | 101        |
| 4.2.3 Results and discussions                                               | 105        |
| 4.3 Constraints to the adoption of Big data and AI                          | 115        |
| 4.3.1 Data Gathering                                                        | 116        |
| 4.3.2 Empirical study                                                       | 120        |
| 4.3.3 Results & Discussion                                                  | 121        |
| 4.4 The key Constraints influencing the adoption of IoT in maritime freight | 125        |
| 4.4.1 Data collection                                                       | 126        |
| 4.4.2 Empirical study                                                       | 129        |
