Contents

1 INTRODUCTION	1
1.1 Surfacing.....	1
1.1.1 Prominent surfacing techniques.....	3
1.2 Types of cladding.....	7
1.2.1 Thin cladding/ thin film deposition	7
1.2.2 Thick cladding	10
1.3 Friction stir welding.....	14
1.3.1 Advantages of FSW	16
1.3.2 Limitations of FSW	17
1.3.3 Microstructural Zones in FSW	18
1.3.4 FSW parameters.....	19
1.4 Variants of FSW.....	21
1.4.1 Friction stir processing.....	21
1.4.2 Friction stir spot welding	22
1.4.3 Bobbin tool friction stir welding.....	23
1.4.4 Friction stir cladding.....	24

1.5	Advantages of friction stir cladding	25
1.6	Dissimilar cladding	26
2	LITERATURE REVIEW	31
2.1	Cladding	31
2.2	Cladding through arc welding processes	32
2.2.1	Cladding through shielded metal arc welding	32
2.2.2	Cladding through gas metal arc welding	33
2.2.3	Cladding through GTAW.....	36
2.2.4	Cladding through submerged arc welding process.....	38
2.3	Cladding through high energy density beam processes	39
2.3.1	Cladding through laser energy.....	40
2.3.2	Cladding through electron beam	44
2.4	Cladding through solid state welding processes	45
2.4.1	Cladding through explosive welding.....	46
2.4.2	Cladding through roll bonding	49
2.4.3	Cladding through cold spraying	51
2.4.4	Friction stir welding and friction stir cladding	53
2.5	Friction stir welding of dissimilar materials	54
2.5.1	Friction stir welding of dissimilar metals in butt position.....	54
2.5.2	Friction stir welding in lap position.....	60
2.5.3	Friction stir cladding.....	61
2.6	Optimization of FSW tool geometry	66
2.6.1	Design of tool shoulder	67
2.6.2	Design of tool pin	71
2.7	Defects formation during FSW	74

2.8	Corrosion protection through cladding	77
2.9	Literature gap.....	81
2.10	Objectives	83
3	EXPERIMENTATION.....	85
3.1	Work material selection.....	85
3.2	Friction stir welding machine	88
3.3	Selection of friction stir welding tool material	89
3.3.1	Selection of tool material, tool shoulder and pin profile	91
3.3.2	Tool grinding setup	94
3.4	Cladding trial runs.....	96
3.4.1	Initial attempts for copper clad aluminium.....	96
3.4.2	Trial runs for performing copper cladding on steel	98
3.4.3	Plunge depth optimisation during copper clad steel	99
3.4.4	Tool offset distance selection.....	101
3.5	Characterization of clad samples	102
3.5.1	Visual inspection.....	102
3.5.2	Temperature measurement.....	102
3.5.3	Radiography of clad samples	103
3.5.4	Metallography of clad samples	103
3.5.5	Microhardness testing	106
3.5.6	Tensile testing	108
3.5.7	Guided bend test	109
3.5.8	XRD analysis	110
3.5.9	Corrosion test.....	111
3.5.10	Atomic force microscopy.....	113

4	RESULTS AND DISCUSSION	115
4.1	Results for copper clad aluminium	115
4.2	Issues during cladding of copper on steel.....	117
4.2.1	Optimization of pin length and tool plunge.....	118
4.2.2	Cavity and defect formation during multi pass cladding.....	119
4.2.3	Tool plunge for multiple passes.....	120
4.3	Tool behaviour analysis.....	121
4.4	Results for copper clad steel with 3 mm minimal offset.....	127
4.4.1	Visual inspection of clad plates	129
4.4.2	Temperature variation during cladding operation	130
4.5	Metallography of copper clad steel.....	132
4.5.1	Optical microstructure evaluation	133
4.5.2	SEM, EDS mapping and its quantification.....	137
4.6	Tool offset distance optimisation	141
4.7	Radiography of clad plates	143
4.8	Metallography of optimised offset distance (7 mm) clad samples ...	147
4.8.1	Optical microstructure of concurrently etched clad specimen	150
4.8.2	SEM analysis of the concurrently etched specimen	153
4.9	Tensile results of clad samples.....	156
4.10	Fractography of clad samples	160
4.11	Guided bend test of clad samples.....	164
4.12	Microhardness of clad samples	165

4.13	XRD analysis of cladded samples	169
4.14	Corrosion results	172
4.14.1	SEM of corroded samples	178
4.14.2	XRD analysis of corroded samples	181
4.14.3	AFM 2D and 3D analysis	182
5	CONCLUSIONS	187
6	SCOPE FOR FUTURE WORK	191
